Operation Manual

Sixth Edition

- **For safety and warning information, please read this manual before attempting to use the equipment.**
- **Additional safety and warning information is provided within the MP1900A Signal Quality Analyzer-R Operation Manual. Please also refer to it before using the equipment.**
- **Keep this manual with the equipment.**

ANRITSU CORPORATION

Document No.: M-W3976AE-6.0

Safety Symbols

To prevent the risk of personal injury or loss related to equipment malfunction, Anritsu Corporation uses the following safety symbols to indicate safety-related information. Ensure that you clearly understand the meanings of the symbols BEFORE using the equipment. Some or all of the following symbols may be used on all Anritsu equipment. In addition, there may be other labels attached to products that are not shown in the diagrams in this manual.

Symbols used in manual

⚠ DANGER This indicates a very dangerous procedure that could result in serious injury or death if not performed properly.

⚠ WARNING This indicates a hazardous procedure that could result in serious injury or death if not performed properly.

⚠ CAUTION This indicates a hazardous procedure or danger that could result in light-to-severe injury, or loss related to equipment malfunction, if proper precautions are not taken.

Safety Symbols Used on Equipment and in Manual

The following safety symbols are used inside or on the equipment near operation locations to provide information about safety items and operation precautions. Ensure that you clearly understand the meanings of the symbols and take the necessary precautions BEFORE using the equipment.

This indicates a prohibited operation. The prohibited operation is indicated symbolically in or near the barred circle.

This indicates an obligatory safety precaution. The obligatory operation is indicated symbolically in or near the circle.

This indicates a warning or caution. The contents are indicated symbolically in or near the triangle.

This indicates a note. The contents are described in the box.

These indicate that the marked part should be recycled.

Equipment Certificate

Anritsu Corporation certifies that this equipment was tested before shipment using calibrated measuring instruments with direct traceability to public testing organizations recognized by national research laboratories, including the National Institute of Advanced Industrial Science and Technology, and the National Institute of Information and Communications Technology, and was found to meet the published specifications.

Anritsu Warranty

Anritsu Corporation will repair this equipment free-of-charge if a malfunction occurs within one year after shipment due to a manufacturing fault, and software bug fixes will be performed in accordance with the separate Software End-User License Agreement, provide, however, that Anritsu Corporation will deem this warranty void when:

- The fault is outside the scope of the warranty conditions separately described in the operation manual.
- The fault is due to mishandling, misuse, or unauthorized modification or repair of the equipment by the customer.
- The fault is due to severe usage clearly exceeding normal usage.
- The fault is due to improper or insufficient maintenance by the customer.
- The fault is due to natural disaster, including fire, wind or flood, earthquake, lightning strike, or volcanic ash, etc.
- The fault is due to damage caused by acts of destruction, including civil disturbance, riot, or war, etc.
- The fault is due to explosion, accident, or breakdown of any other machinery, facility, or plant, etc.
- The fault is due to use of non-specified peripheral or applied equipment or parts, or consumables, etc.
- The fault is due to use of a non-specified power supply or in a non-specified installation location.
- The fault is due to use in unusual environments(Note).
- The fault is due to activities or ingress of living organisms, such as insects, spiders, fungus, pollen, or seeds.

In addition, this warranty is valid only for the original equipment purchaser. It is not transferable if the equipment is resold.

Anritsu Corporation shall assume no liability for damage or financial loss of the customer due to the use of or a failure to use this equipment, unless the damage or loss is caused due to Anritsu Corporation’s intentional or gross negligence.

Note:
For the purpose of this Warranty, "unusual environments" means use:

- In places of direct sunlight
- In dusty places
- Outdoors
- In liquids, such as water, oil, or organic solvents, and medical fluids, or places where these liquids may adhere
- In salty air or in place chemically active gases (sulfur dioxide, hydrogen sulfide, chlorine, ammonia, nitrogen dioxide, or hydrogen chloride etc.) are present
- In places where high-intensity static electric charges or electromagnetic fields are present
- In places where abnormal power voltages (high or low) or instantaneous power failures occur
- In places where condensation occurs
- In the presence of lubricating oil mists
- In places at an altitude of more than 2,000 m
- In the presence of frequent vibration or mechanical shock, such as in cars, ships, or airplanes

Anritsu Corporation Contact

In the event of this equipment malfunctions, please contact an Anritsu Service and Sales office. Contact information can be found on the last page of the printed version of this manual, and is available in a separate file on the PDF version.

Notes On Export Management

This product and its manuals may require an Export License/Approval by the Government of the product's country of origin for re-export from your country.
Before re-exporting the product or manuals, please contact us to confirm whether they are export-controlled items or not.
When you dispose of export-controlled items, the products/manuals need to be broken/shredded so as not to be unlawfully used for military purpose.

Crossed-out Wheeled Bin Symbol

Equipment marked with the Crossed-out Wheeled Bin Symbol complies with council directive 2012/19/EU (the “WEEE Directive”) in European Union.

For Products placed on the EU market after August 13, 2005, please contact your local Anritsu representative at the end of the product's useful life to arrange disposal in accordance with your initial contract and the local law.

Software End-User License Agreement (EULA)

Please carefully read and accept this Software End-User License Agreement (hereafter this EULA) before using (includes executing, copying, installing, registering, etc.) this Software (includes programs, databases, scenarios, etc., used to operate, set, etc., Anritsu electronic equipment, etc.). By using this Software, you shall be deemed to have agreed to be bound by the terms of this EULA, and Anritsu Corporation (hereafter Anritsu) hereby grants you the right to use this Software with the Anritsu specified equipment (hereafter Equipment) for the purposes set out in this EULA.

Article 1. Grant of License and Limitations

1. You may not to sell, transfer, rent, lease, lend, disclose, sublicense, or otherwise distribute this Software to third parties, whether or not paid therefor.
2. You may make one copy of this Software for backup purposes only.
3. You are not permitted to reverse engineer, disassemble, decompile, modify or create derivative works of this Software.
4. This EULA allows you to install one copy of this Software on one piece of Equipment.

Article 2. Disclaimers

To the extent not prohibited by law, in no event shall Anritsu be liable for direct, or any incidental, special, indirect or consequential damages whatsoever, including, without limitation, damages for loss of profits, loss of data, business interruption or any other commercial damages or losses, and damages claimed by third parties, arising out of or related to your use or inability to use this Software, unless the damages are caused due to Anritsu's intentional or gross negligence.

Article 3. Limitation of Liability

1. If a fault (bug) is discovered in this Software, failing this Software to operate as described in the operation manual or specifications even though you have used this Software as described in the manual, Anritsu shall at its own discretion, fix the bug, or replace the software, or suggest a workaround, free-of-charge, provided, however, that the faults caused by the following items and any of your lost or damaged data whatsoever shall be excluded from repair and the warranty.
   i) If this Software is deemed to be used for purposes not described in the operation manual or specifications.
   ii) If this Software has been used in conjunction with other non-Anritsu-approved software.
   iii) If this Software or the Equipment has been modified, repaired, or otherwise altered without Anritsu's prior approval.
   iv) For any other reasons out of Anritsu's direct control and responsibility, such as but not limited to, natural disasters, software virus infections, or any devices other than this Equipment, etc.
2. Expenses incurred for transport, hotel, daily allowance, etc., for on-site repairs or replacement by Anritsu engineers necessitated by the above faults shall be borne by you.
3. The warranty period for faults listed in Section 1 of this Article shall be either 6 months from the date of purchase of this Software or 30 days after the date of repair or replacement, whichever is longer.

Article 4. Export Restrictions

You shall not use or otherwise export or re-export directly or indirectly this Software except as authorized by the laws and regulations of Japan and the United States, etc. In particular, this Software shall not be exported or re-exported (a) into any Japan or US embargoed countries or (b) to anyone restricted by the Japanese export control regulations, or the US Treasury Department's list of Specially Designated Nationals or the US Department of Commerce Denied Persons List or Entity List. In using this Software, you warrant that you are not located in any such embargoed countries or on any such lists. You also agree that you will not use or otherwise export or re-export this Software for any purposes prohibited by the Japanese and US laws and regulations, including, without limitation, the development, design and manufacture or production of missiles or nuclear, chemical or biological weapons of mass destruction, and conventional weapons.

Article 5. Change of Terms

Anritsu may change without your approval the terms of this EULA if the changes are for the benefit of general customers, or are reasonable in light of the purpose of this EULA and circumstances of the changes. At the time of change, Anritsu will inform you of those changes and its effective date, as a general rule 45 days, in advance on its website, or in writing or by e-mail.

Article 6. Termination

1. Anritsu may terminate this EULA immediately if you violate any conditions described herein. This EULA shall also be terminated immediately by Anritsu if there is any good reason that it is deemed difficult to continue this EULA, such as your violation of Anritsu copyrights, patents, etc. or any laws and ordinances, or if it turns out that you belong to an antisocial organization or has a socially inappropriate relationship with members of such organization.
2. You and Anritsu may terminate this EULA by a written notice to the other party 30 days in advance.

Article 7. Damages

If Anritsu suffers any damages or loss, financial or otherwise, due to your violation of the terms of this EULA, Anritsu shall have the right to seek proportional damages from you.

Article 8. Responsibility after Termination

Upon termination of this EULA in accordance with Article 6, you shall cease all uses of this Software immediately and shall as directed by Anritsu either destroy or return this Software and any backup copies, full or partial, to Anritsu.

Article 9. Negotiation for Dispute Resolution

If matters of interpretational dispute or items not covered under this EULA arise, they shall be resolved by negotiations in good faith between you and Anritsu.

Article 10. Governing Law and Court of Jurisdiction

This EULA shall be governed by and interpreted in accordance with the laws of Japan without regard to the principles of the conflict of laws thereof, and any disputes arising from or in relation to this EULA that cannot be resolved by negotiation described in Article 9 shall be subject to and be settled by the exclusive agreed jurisdiction of the Tokyo District Court of Japan.

Revision History:

February 29th, 2020

CE Conformity Marking

Anritsu affixes the CE conformity marking on the following product(s) in accordance with the Decision 768/2008/EC to indicate that they conform to the EMC, LVD and RoHS directive of the European Union (EU).

CE marking

1. Product Model

Plug-in Units: MU196020A PAM4 PPG
MU196040A PAM4 ED
MU196040B PAM4 ED

2. Applied Directive and Standards

When the MU196020A PAM4 PPG, MU196040A PAM4 ED and MU196040B PAM4 ED are installed in the MP1900A, the applied directive and standards of this unit conform to those of the MP1900A main frame.

PS: About main frame
Please contact Anritsu for the latest information on the main frame types that MU196020A, MU196040A and MU196040B can be used with.

RCM Conformity Marking

Anritsu affixes the RCM mark on the following product(s) in accordance with the regulation to indicate that they conform to the EMC framework of Australia/New Zealand.

RCM marking

1. Product Model

Plug-in Units: MU196020A PAM4 PPG
MU196040A PAM4 ED
MU196040B PAM4 ED

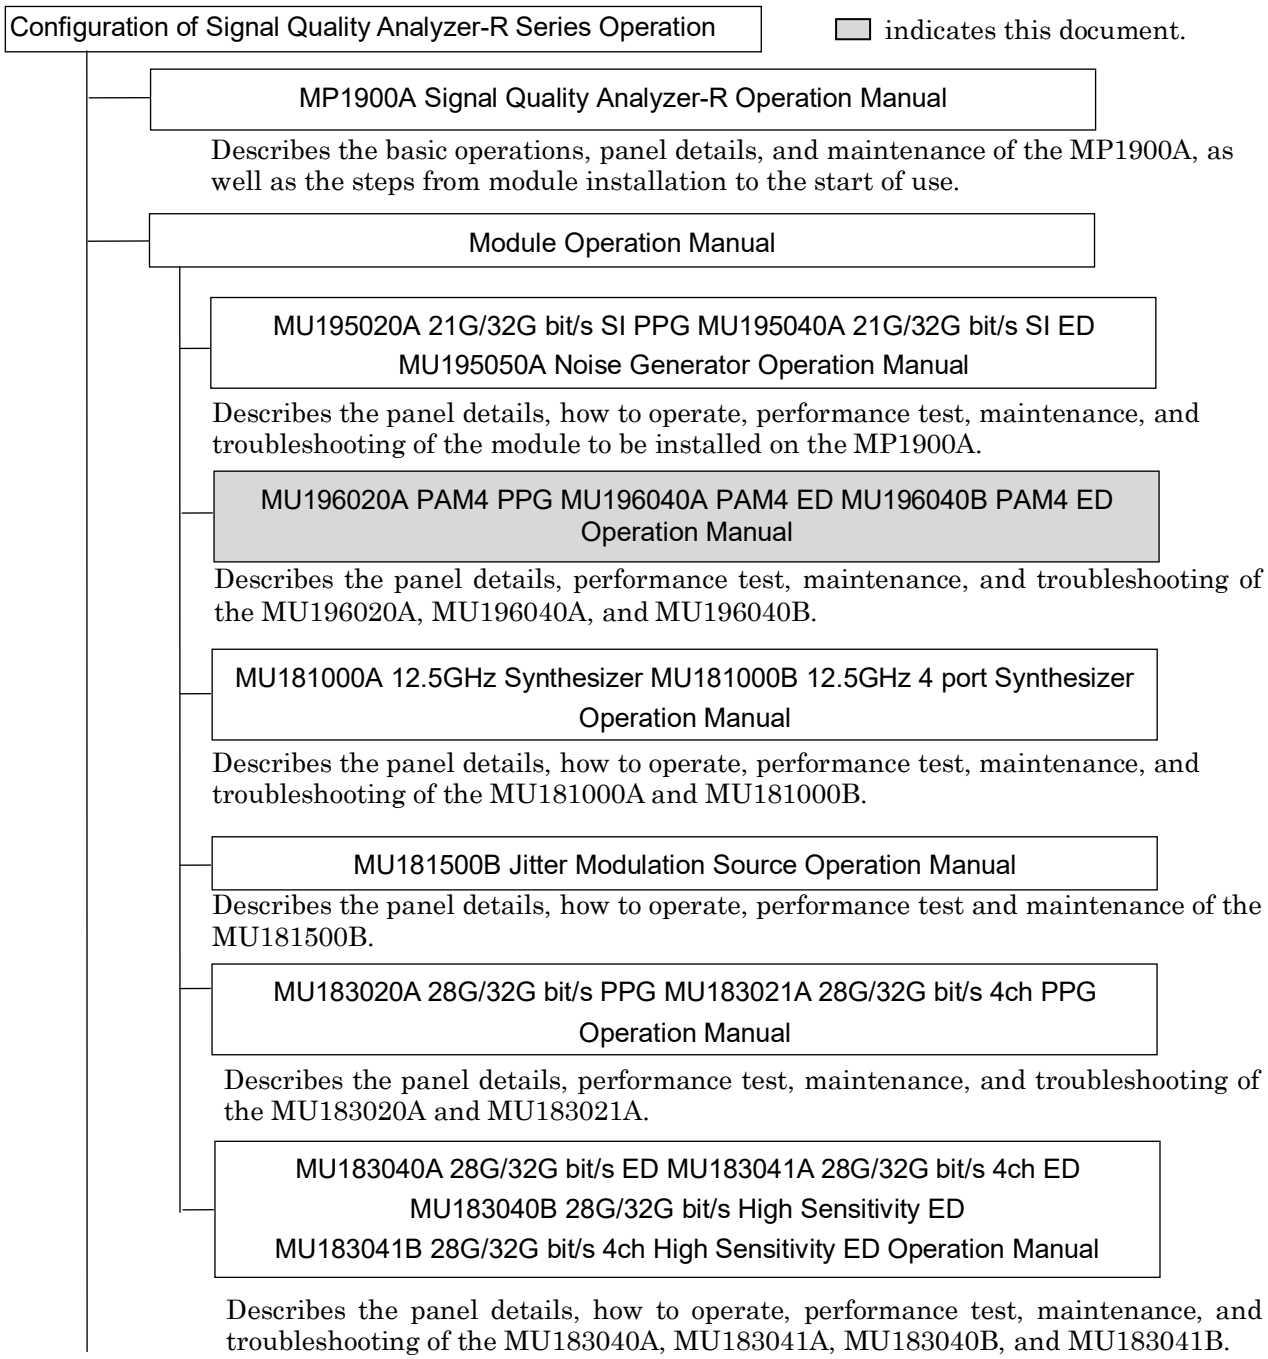
2. Applied Directive and Standards

When the MU196020A PAM4 PPG, MU196040A PAM4 ED and MU196040B PAM4 ED are installed in the MP1900A, the applied directive and standards of this unit conform to those of the MP1900A main frame.

PS: About main frame
Please contact Anritsu for the latest information on the main frame types that MU196020A, MU196040A and MU196040B can be used with.

About This Manual

A testing system combining an MP1900A Signal Quality Analyzer-R, module(s), and control software is called a Signal Quality Analyzer-R Series. The operation manuals of the Signal Quality Analyzer-R Series consist of separate documents for the MP1900A, module(s), and control software, as shown below.



Configuration of Signal Quality Analyzer-R Series Operation Manuals (Cont'd)

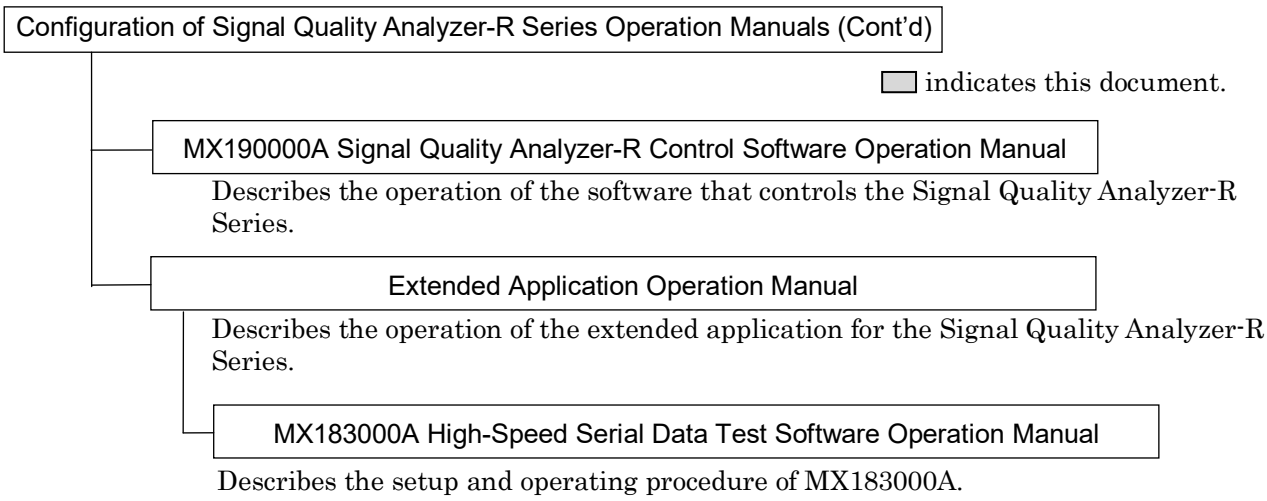


Table of Contents

Chapter 1 Overview

This chapter describes the overview of the following modules.

- MU196020A PAM4 PPG (hereafter, MU196020A)
- MU196040A PAM4 ED (hereafter, MU196040A)
- MU196040B PAM4 ED (hereafter, MU196040B)

1.1 Product Overview

The MU196020A, MU196040A, and MU196040B (hereinafter "MP1900A modules") are plug-in modules that can be built into the MP1900A Signal Quality Analyzer-R. MP1900A supports error measurement with PRBS patterns, DATA patterns and various PAM4 test patterns at the following bit rates or baud rates:

- MU196020A: Max. 64.2 Gbit/s or 64.2 Gbaud
- MU196040A: Max. 32.1 Gbit/s or 32.1 Gbaud
- MU196040B: Max. 64.2 Gbit/s or 58.2 Gbaud

Combination of MU196020A and MU195050A Noise Generator (hereinafter, MU195050A) supports generation of data which common mode noise, differential mode noise and white noise are applied to and which is optimal for signal integrity evaluation of up to 32.1 Gbaud.
Various option configurations are available for the MP1900A modules. This module is therefore useful for research, development, and production of various types of digital communication equipment, modules, and devices.
The features of the MP1900A modules are as follows:

MU196020A features

- Capable of generating one channel of NRZ or PAM4 signal at up to 64.2 Gbit/s or 64.2 Gbaud. (MU196020A-003)
- Capable of independently adjusting the amplitude of each eye of PAM4 signal.
- Capable of generating signals of PRBS pattern, DATA pattern and various PAM4 patterns.
- Capable of signal integrity evaluation using 4TAP Emphasis (MU196020A-x11)
- Capable of adding intersymbol interference (ISI) using 4TAP Emphasis. (MU196020A-x40)
- Capable of generating patterns and inserting errors, which support RS-FEC(544,514) and RS-FEC(528,514). (MU196020A-x42)
- Capable of synchronizing operations among channels using multiple MU196020As that are installed in MP1900A.
  This function allows generating synchronous data supported by the application that requires Multi Channel. (MU196020A-x50)

MU196040A features

- Supporting symbol measurement of one channel of PAM4 signal at up to 32.1 Gbaud using the built-in PAM4 Decoder circuit.
- Capable of measuring signals of PRBS pattern, DATA pattern and various PAM4 patterns.
- Long user-programmable patterns (256 Mbits, 256 Msymbol)
- Capable of evaluating serial communication by selecting MU196040A-001 that has one data input channel each for NRZ (32.1 Gbit/s) and PAM4 (32.1 Gbaud).
- Having the input sensitivity (typical values) of NRZ 23 mV (32.1 Gbit/s, Eye Height) and PAM4 23 mV (32.1 Gbaud, Eye Height, per eye) and optimal for signal evaluation.
- Capable of clock recovery on 25.5 to 32.1 Gbaud signals by installing MU196040A-x22.
- Capable of evaluating PAM4 signals by Symbol Error Rate (SER) by installing MU196040A-x41.

MU196040B features

- Supporting symbol measurement of one channel of PAM4 signal at up to 58.2 Gbaud using the built-in PAM4 Decoder circuit.
- Capable of measuring signals of PRBS pattern, DATA pattern and various PAM4 patterns.
- Long user-programmable patterns (256 Mbits, 256 Msymbols)
- Capable of capturing the data pattern of up to 8 Mbits or 4 Msymbols.
- Capable of capturing the data pattern, in which RS-FEC Symbol Error(s) occurred, and counting FEC Symbol Errors.
- Capable of evaluating serial communication by selecting MU196040B-002 or x12 that has one data input channel each for NRZ (64.2 Gbit/s) and PAM4 (58.2 Gbaud).
- Having the input sensitivity (typical values) of NRZ 23 mV (32.1 Gbit/s, Eye Height) and PAM4 23 mV (32.1 Gbaud, Eye Height, per eye) and optimal for signal evaluation.
- Capable of using the Equalizer function by adding the MU196040B-x11.
- Capable of clock recovery on 2.4 to 29.0 Gbaud signals by installing MU196040B-x21.
- Capable of clock recovery on 2.4 to 32.1 Gbaud signals by installing MU196040B-x22.
- Capable of clock recovery on 51.0 to 58.2 Gbaud signals by installing MU196040B-x23.
- Capable of evaluating PAM4 signals by Symbol Error Rate (SER) by installing MU196040B-x41.

1.2 Product Configuration

1.2.1 Standard configuration

Table 1.2.1-1 and Table 1.2.1-2 below show the standard configurations of the three MP1900A modules respectively.

Table 1.2.1-1 Standard Configuration of MU196020A

Item	Model Name	Product Name	Q'ty	Remarks
Mainframe	MU196020A	PAM4 PPG	1	
Accessories	J1632A	Terminator	4	Clock Output, Aux Output × 2, Gating Output
	V210	Terminator	2	Data Output × 2
	J1341A	Open	2	Ext Clock Input, AUX Input
	J1359A	Coaxial Adaptor (K-P.K-J, SMA)	1	Clock Output
	J1717A	Coaxial Adaptor (SMA-P, SAM-J)	5	Ext Clock Input, Aux Output × 2, Gating Output, AUX Input

Table 1.2.1-2 Standard Configuration of MU196040A

Item	Model Name	Product Name	Q'ty	Remarks
Mainframe	MU196040A	PAM4 ED	1	
Accessories	J1632A	Terminator	2	Aux Output × 2,
	J1341A	Open	2	Ext Clock Input, AUX Input
	J1359A	Coaxial Adaptor (K-P.K-J, SMA)	1	Ext Clock Input
	J1717A	Coaxial Adaptor (SMA-P, SAM-J)	3	Aux Output × 2, AUX Input
	When the MU196040A-001 is installed:			
	J1341A	Open	2	Data Input × 2
	J1359A	Coaxial Adaptor (K-P.K-J, SMA)	2	Data Input × 2

Table 1.2.1-3 Standard Configuration of MU196040B

Item	Model Name	Product Name	Q'ty	Remarks
Mainframe	MU196040B	PAM4 ED	1	
Accessories	V210	Terminator	2	Data Input × 2
	J1341A	Open	2	Ext Clock Input, AUX Input
	J1359A	Coaxial Adaptor (K-P.K-J, SMA)	1	Ext Clock Input
	J1632A	Terminator	2	Aux Output × 2,
	J1717A	Coaxial Adaptor (SMA-P, SAM-J)	3	Aux Output × 2, AUX Input
	41V-6	Precision Fixed Attenuator	2	Data Input × 2

1.2.2 Options

Table 1.2.2-1 and Table 1.2.2-2 show the options for the MP1900A modules. All options are sold separately.

Note:

Option name format is as follows:

MU196020A-x x x

Indicates function.
This value is recognized by the MP1900A.

Anritsu management number.
This value is not recognized by the mainframe.
0: Factory-installed option
1: Retrofit option.
(Must be returned to Anritsu (Japan) when installing.)
2: Retrofit option.
(Must be returned to Anritsu Service and Sales office when installing.)
3: Software option.
License registration is required when installing

Table 1.2.2-1 Options of MU196020A

Model Name	Product Name	Remarks
MU196020A-001	32G baud	*1
MU196020A-002	58G baud	*1
MU196020A-003	64G baud	*1
MU196020A-y12	32G to 58G baud Extension Retrofit	*2,*3
MU196020A-y13	32G to 64G baud Extension Retrofit	*2,*3
MU196020A-y23	58G to 64G baud Extension Retrofit	*2,*4
MU196020A-x11	4Tap Emphasis	*5
MU196020A-x30	Data Delay	*5
MU196020A-x40	Adjustable ISI	*5, *6
MU196020A-x42	FEC Pattern Generation	*5
MU196020A-x50	Inter-Module Synchronization	*5, *7

*1: Factory-installed hardware option. Select one from among them.

*2: Hardware retrofit options, which can be selected after shipping from our factory. (y = 1 or 2)

*3: It can be retrofitted when the Option 001 is installed.

*4: It can be retrofitted when the Option 002 is installed.

*5: Software option (x = 0, 1, or 2)

*6: It can be retrofitted when the Option x11 is installed.

*7: It can be retrofitted when the Option x30 is installed.

Table 1.2.2-2 Options of MU196040A

Model Name	Product Name	Remarks
MU196040A-001	32.1G baud Decoder	*1
MU196040A-x22	25.5G to 32.1G baud Clock Recovery	*2,*3
MU196040A-x41	SER Measurement	*2,*4

*1: Factory-installed hardware option

*2: x = 0, 1, or 2

*3: Hardware option

*4: Software option

Table 1.2.2-3 Options of MU196040B

Model Name	Product Name	Remarks
MU196040B-001	32G baud	*1,*2
MU196040B-002	58G baud	*1,*2
MU196040B-z11	Equalizer	*2,*11
MU196040B-y12	32G to 58G baud Extension	*2,*5,*6
MU196040B-x21	29G baud Clock Recovery	*3,*4,*7,*8
MU196040B-x22	32G baud Clock Recovery	*3,*4,*7,*8
MU196040B-x23	58G baud Clock Recovery Extension	*2,*4,*9
MU196040B-y24	32G baud Clock Recovery Extension	*3,*5,*10
MU196040B-z41	SER Measurement	*2,*11

*1: Factory-installed

*2: Software option

*3: Hardware option

*4: x = 0, 1, or 2

*5: y = 1 or 2

*6: MU196040B-001 must be installed.

*7: This option can be installed together with MU196040B-x23.

*8: One of MU196040B-x21 and MU196040B-x22 can be installed.

*9: MU196040B-002 or MU196040B-y12 must be installed.
MU196040B-x21 or MU196040B-x22 must be installed.

*10: MU196040B-x21 must be installed.

*11: z = 0, 1, 2, or 3

1.2.3 Optional Accessories

Table 1.2.3-1 shows the optional accessories for the MP1900A modules. All optional accessories are sold separately.

Table 1.2.3-1 Optional Accessories

Model Name	Product Name	Remarks
34VFK50	Precision Adapter	Conversion connector (V-F K-M)

1.3 Specifications

1.3.1 Specifications for MU196020A

Table 1.3.1-1 Operating Baud/Bit Rate

Item	Specifications
Operating Baud/Bit Rate	When the Option 001 is installed. PAM4: 2.4 to 32.1 Gbaud NRZ: 2.4 to 32.1 Gbit/s When the Option 002 or y12 is installed. PAM4: 2.4 to 58.2 Gbaud NRZ: 2.4 to 58.2 Gbit/s When the Option 003, y13, or y23 is installed. PAM4: 2.4 to 64.2 Gbaud NRZ: 2.4 to 64.2 Gbit/s The setting range of the baud rate (PAM4 output) and bit rate (NRZ output) is common. Only the baud rate is described hereafter.
Setting Range / Step	The setting range of the baud rate is determined by the linking module (valid only when installing to the same frame as MU196020A) and the Frequency in Table 1.3.1-12 Clock Output.
When linking with MU181000A/B *4	2.400 000 to 25.000 000 Gbaud, 0.000 002 Gbaud step*1, *2, *3 25.000 004 to 32.100 000 Gbaud, 0.000 004 Gbaud step*1, *2, *3 25.000 004 to 50.000 000 Gbaud, 0.000 004 Gbaud step*2, *3 50.000 008 to 58.200 000 Gbaud, 0.000 008 Gbaud step*2 50.000 008 to 64.200 000 Gbaud, 0.000 008 Gbaud step*3
When linking with MU181000A/B and MU181500B *4	2.400 000 to 3.125 000 Gbaud, 0.000 002 Gbaud step*1, *2, *3 3.200 002 to 6.250 000 Gbaud, 0.000 002 Gbaud step*1, *2, *3 6.400 002 to 12.500 000 Gbaud, 0.000 002 Gbaud step*1, *2, *3 12.800 002 to 25.000 000 Gbaud, 0.000 002 Gbaud step*1, *2, *3 25.600 004 to 32.100 000 Gbaud, 0.000 004 Gbaud step*1, *2, *3 25.600 004 to 50.000 000 Gbaud, 0.000 004 Gbaud step*2, *3 51.200 008 to 58.200 000 Gbaud, 0.000 008 Gbaud step*2 51.200 008 to 64.200 000 Gbaud, 0.000 008 Gbaud step*3

*1: When the Option 001 is installed.

*2: When the Option 002 or y12 is installed.

*3: When the Option 003, y13, or y23 is installed.

*4: Linking is not available when **Unit Sync** is **ON**.

Table 1.3.1-3 External Clock Input

Item	Specifications
Number of Inputs	1 (Single-Ended)
Input frequency range	1.2 to 16.05 GHz
Input amplitude	0.3 to 1.0 Vp-p (–6.5 to +4.0 dBm)
Termination	50 Ω, AC Coupling
Connector	SMA connector (f.)

Table 1.3.1-4 Aux Input

Item	Specifications
Number of Inputs	1 (Single-Ended)
Variation	Error Injection, Burst, Unit Sync
Minimum Pulse Width	1/256 of data rate
Input level	• 0/–1 V (H: –0.25 to 0.05 V, L: –1.1 to –0.8 V) • 0/–0.5 V (H: –0.05 to 0.05 V, L: –0.55 to –0.45 V) • Vth 0 V (Input amplitude: 0.5 to 1.0 Vp-p) Select one of the above.
Termination	50 Ω, GND
Connector	SMA connector (f.)

Table 1.3.1-5 Aux Output

Item	Specifications
Number of Outputs	2 (Differential output)
Output control	ON/OFF switching
Variation	1/n Clock (n = 8, 12, 16, 20...1020, 1024), Pattern Sync, Burst Out2
Pattern Sync PRBS, PRGM	Position: 1 to {(Least common multiple of Pattern Length' and 256) –263}, in 8 steps When the pattern length is 1023 bits or less, Pattern Length' is the length as an integer multiple so that it becomes 1024 bits or more.
Burst Out2 Burst Trigger Delay Pulse Width	 0 to (Burst Cycle – 256) bits, 8 bits step 16 to (Burst Cycle – 256) bits, 8 bits step
Output level	0/–0.6 V (H: –0.25 to 0.05 V, L: –0.80 to –0.45 V)
Termination	50 Ω, GND
Connector	SMA connector (f.)

Table 1.3.1-6 Gating Output

Item	Specifications
Number of Outputs	1 (Single-Ended)
Output control	ON/OFF switching
Variation	Burst, Repeat
Burst	Burst Output
Burst Trigger Delay	0 to (Burst Cycle – 256) bits, 8 bits step
Enable Pulse Width	16 to (Burst Cycle – 256) bits, 8 bits step
Output Level	0/–1 V (H: –0.25 to 0.05 V, L: –1.25 to –0.8 V)*
Repeat	Timing Signal Output
Timing Signal Cycle	INT ($\frac{\text{Pattern length'}}{256}$) × 256
Timing Signal Delay	0 to {(Least common multiple of Pattern Length' and 256) –256} The maximum settable number is 68 719 476 480, in 8-bit steps When the pattern length is 1023 bits or less, Pattern Length' is the length as an integer multiple so that it becomes 1024 bits or more.
Timing Signal Pulse Width	256 to {(Least common multiple of Pattern Length' and 256) –256} The maximum settable number is 68 719 476 480, in 8-bit steps When the pattern length is 1023 bits or less, Pattern Length' is the length as an integer multiple so that it becomes 1024 bits or more.
Output Level	0/–1 V (H: –0.25 to 0.05 V, L: –1.25 to –0.8 V)*
Unit Sync Output	Outputs the timing signal when **Unit Sync** is set to **ON**.
Termination	50 Ω, GND
Connector	SMA connector (f.)

*: L: Output Enable, H: Output Disable

Table 1.3.1-7 Generated Pattern

Item	Specifications
PRBS	
Pattern Length	2^n-1 (n = 7, 9, 10, 11, 13, 15, 20, 23, 31)
Mark ratio	1/2 (1/2INV is supported by a logical inversion.)
PRBS generator polynomial	n = 7: $1 + X^6 + X^7$ n = 9: $1 + X^5 + X^9$ n = 10: $1 + X^7 + X^{10}$ n = 11: $1 + X^9 + X^{11}$ n = 13: $1 + X + X^2 + X^{12} + X^{13}$ n = 15: $1 + X^{14} + X^{15}$ n = 20: $1 + X^3 + X^{20}$ n = 23: $1 + X^{18} + X^{23}$ n = 31: $1 + X^{28} + X^{31}$
PRBS Inversion	This is available in PAM4 mode only. Logical inversion of PRBS can be set independently for MSB and LSB.
Zero-Substitution	This is available in NRZ mode only.
Additional bit	0 bit, 1 bit
Pattern Length	2^n (n = 7, 9, 10, 11, 15, 20, 23) 2^n-1 (n = 7, 9, 10, 11, 15, 20, 23)
Start position	Bit after the longest run of zero bits
Length of Consecutive Zero Bits	1 to (Pattern Length – 1) bits If the bit coming after Zero-substitution is “0”, then it is replaced with “1”.
Data	
Data Length	NRZ: 2 to 268 435 456 bits, 1 bit step PAM4: 2 to 268 435 456 symbols, 1 symbol step
Bit Shift	This is available in PAM4 mode only. Bit shift of MSBs can be controlled in the range of ±256 bits (in 1-bit steps).
PAM4 Standard Pattern	Standard-compliant PAM4-mode patterns
CEI	QPRBS13-CEI, QPRBS31-CEI
IEEE	IEEE802.3bs/cd: PRBS13Q, PRBS31Q, SSPRQ, Square Wave IEEE802.3bj: QPRBS13, JP03A, JP03B, Transmitter Linearity
InfiniBand	PRBS13Q (InfiniBand), PRBS23Q, PRBS31Q (InfiniBand)
Fibre Channel	PRBS31Q (Fibre Channel)
RS-FEC	When the MU196020A-x42 is installed. RS-FEC Scrambled Idle 50G 1Lane, RS-FEC Scrambled Idle 100G 1Lanes, RS-FEC Scrambled Idle 100G 2Lanes, RS-FEC Scrambled Idle 200G 4Lanes, RS-FEC Scrambled Idle 400G 4Lanes, RS-FEC Scrambled Idle 400G 8Lanes
NRZ Standard Pattern	Standard-compliant NRZ-mode pattern
CEI	SSPR
RS-FEC	When the MU196020A-x42 is installed. RS-FEC Scrambled Idle 25G 1Lane, RS-FEC Scrambled Idle 100G 4Lanes

Table 1.3.1-8 Pattern Sequence

Item	Specifications
Sequence	Repeat, Burst
Repeat	Continuous Pattern
Burst	This is available only when Coding is NRZ.
Source	Internal, External-Trigger (Aux Input), External-Enable (Aux Input)
Data Sequence	Restart, Consecutive, Continuous
Enable period	Internal: 12 800 to 2 147 483 136 bits, 256 bits step Ext Trigger/Enable: 12 800 to 2 147 483 648 bits, 256 bits step
Burst Cycle	25 600 to 2 147 483 648 bits, 1 024 bits step

Table 1.3.1-9 Coding

Item	Specifications
Coding	NRZ, PAM4
NRZ	Normal, Invert
PAM4 Gray Coding	ON, OFF
PAM4 Precoding (1/(1 + D) mod 4)*	ON, OFF

*: (1/(1+D) mod 4) is a generator polynomial defined in the IEEE802.3.

Table 1.3.1-10 Error Addition

Item	Specifications
Type	Bit, Error on MSB, Error on LSB, Error on LSB&MSB, RS-FEC Symbol Error*
Bit	This is available only when Coding is NRZ.
Source	Internal, External-Trigger (Rise edge trigger), External-Disable (L: Disable)
Error Variation	Repeat, Single (Cannot be selected when Source is External-Trigger.)
Error Rate	*E–n (* = 1 to 9, n = 3 to 12), Upper limit: 3.0E–3
Error Route	Select 1 to 32, Scan
Bit/Burst	Switching between Bit and Burst
Burst Length	1 to 256, 1 step
RS-FEC Symbol Error*	This is available whether Coding is NRZ or PAM4. When Coding is PAM4, an error is inserted to make the PAM4 signal change by one level only. NRZ: An error is inserted every 10 bits. PAM4: An error is inserted every 10 or 20 PAM4 symbols.
Source	Internal, External-Trigger (Rise edge trigger), External-Disable (L: Disable)
Error Variation	Repeat, Single (Cannot be selected when Source is External-Trigger.)
Symbol error per codeword	1 to 20 (When Coding is NRZ and PAM4.)

*: When the MU196020A-x42 is installed.

Table 1.3.1-10 Error Addition (Cont'd)

Item	Specifications
RS-FEC Symbol Error* (Cont'd)	
Error Rate	*E–n (* = 1 to 9, n = 3 to 12), Upper limit: 3.0E–3
Error Addition Method	Type1: Level 0 → Level 1, Level 1 → Level 2, Level 2 → Level 3, Level 3 → Level 2 Type2: Level 0 → Level 1, Level 1 → Level 2, Level 2 → Level 1, Level 3 → Level 2 Type3: Level 0 → Level 1, Level 1 → Level 0, Level 2 → Level 1, Level 3 → Level 2 MSB Only: Level 0 → Level 2, Level 1 → Level 3, Level 2 → Level 0, Level 3 → Level 1 LSB Only: Level 0 → Level 1, Level 1 → Level 0, Level 2 → Level 3, Level 3 → Level 2
Error on MSB	Adds the specified symbol error. This is available only when Coding is PAM4. The set error is added to MSB only.
Source	Internal, External-Trigger (Rise edge trigger), External-Disable (L: Disable)
Error Variation	Repeat, Single (Cannot be selected when Source is External-Trigger.)
Symbol Error Rate	*E–n (* = 1 to 9, n = 3 to 12), Upper limit: 3.0E–3
Symbol/Burst	Switching between Symbol and Burst
Burst Length	1 to 256, 1 step
Error on LSB	Adds the specified symbol error. This is available only when Coding is PAM4. The set error is added to LSB only.
Source	Internal, External-Trigger (Rise edge trigger), External-Disable (L: Disable)
Error Variation	Repeat, Single (Cannot be selected when Source is External-Trigger.)
Symbol Error Rate	*E–n (* = 1 to 9, n = 3 to 12), Upper limit: 3.0E–3
Symbol/Burst	Switching between Symbol and Burst
Burst Length	1 to 256, 1 step

Table 1.3.1-10 Error Addition (Cont'd)

Item	Specifications
Error on LSB&MSB	Adds the specified symbol error. This is available only when Coding is PAM4. An error is inserted to make the PAM4 signal change by one level only.
Source	Internal, External-Trigger (Rise edge trigger), External-Disable (L: Disable)
Error Variation	Repeat, Single (Cannot be selected when Source is External-Trigger.)
Symbol Error Rate	*E–n (* = 1 to 9, n = 3 to 12), Upper limit: 3.0E–3
Symbol/Burst	Switching between Symbol and Burst
Burst Length	1 to 256, 1 step
Error Addition Method	Type1: Level 0 → Level 1, Level 1 → Level 2, Level 2 → Level 3, Level 3 → Level 2 Type2: Level 0 → Level 1, Level 1 → Level 2, Level 2 → Level 1, Level 3 → Level 2 Type3: Level 0 → Level 1, Level 1 → Level 0, Level 2 → Level 1, Level 3 → Level 2
FEC Standard	When Coding is NRZ: RS-FEC Scrambled Idle 25G 1Lane, RS-FEC Scrambled Idle 100G 4Lanes When Coding is PAM4: RS-FEC Scrambled Idle 50G 1Lane, RS-FEC Scrambled Idle 100G 1Lanes, RS-FEC Scrambled Idle 100G 2Lanes, RS-FEC Scrambled Idle 200G 4Lanes, RS-FEC Scrambled Idle 400G 4Lanes, RS-FEC Scrambled Idle 400G 8Lanes

Table 1.3.1-11 Data Output

Item	Specifications*1
Number of Outputs	2 (Data, XData) Cannot be varied independently
Waveform	NRZ, PAM4
NRZ Eye Amplitude	
Setting Range	NRZ: 70 to 800 mVp-p, 2 mV step (Single-Ended)
Accuracy	When using the J1789A: ±35 mV ±12% (Single-Ended)*2 When using the J1790A: ±35 mV ±12% (Single-Ended)*3, *4, *5
PAM4 Eye Amplitude	
PAM4 (0/3 Level) Setting Range	PAM4(0/3 Level):70 to 800 mVp-p, 1 mV step (Single-Ended)*6
PAM4 (0/3 Level) Accuracy	When using the J1789A: ±35 mV ±12% of Amplitude*2, *7 When using the J1790A: ±35 mV ±12% of Amplitude*3, *4, *5, *7
PAM4 (0/1, 1/2, 2/3 Level) Independently variable	Provided, 20% to 50%, 1 mV Step (Eye amplitude conversion) (PAM4 Amplitude 0/3 level is assumed to be 100%.)
PAM4 (0/1, 1/2, 2/3 Level) Setting Range	PAM4(0/1 Level):23 to 266 mVp-p, 1 mV step (Single-Ended) PAM4(1/2 Level):24 to 268 mVp-p, 1 mV step (Single-Ended) PAM4(2/3 Level):23 to 266 mVp-p, 1 mV step (Single-Ended)
PAM4 (0/1, 1/2, 2/3 Level) Accuracy	When using the J1789A: ±35mV ±12% of Amplitude*8 When using the J1790A: ±35 mV ±12% of Amplitude*9, *10, *11
Offset	
Setting Range	–2.0–Eye Amplitude/2 to +3.3–Eye Amplitude/2 Vth, 1 mV step (Single-Ended)
Accuracy	±65 mV ±10% of offset (Vth) ± (Eye Amplitude Accuracy / 2) (Except when Emphasis is turned On with the MU196020A-x11 installed.) (For PAM4, when setting each of PAM4 Amplitude (3/2, 2/1 and 1/0) equally to 33%.)
Cross Point	Typ. 50% (fixed)
Tr/Tf	When using the J1789A: Typ. 9 ps (20-80%)*12 Typ. 8.5 ps (20-80%)*13 When using the J1790A: Typ. 9.5 ps (20-80%)*12 Typ. 8.8 ps (20-80%)*13

*1: Unless otherwise specified, these are specified with the conditions of PRBS2^{31}–1, Mark ratio 1/2, and Cross Point 50%.

The values shall be observed by using an optional accessory, J1789A or J1790A, and a 70-GHz bandwidth sampling oscilloscope.

*2: Setting Range ≤ 700 mVp-p

*3: Setting Range ≤ 700 mVp-p
(≤ 32.1 Gbit/s, when the Options 001, 002, y12, 003, y13 and y23 are installed)

*4: Setting Range ≤ 600 mVp-p
(≤ 58.2 Gbit/s, when the Options 002, y12, 003, y13 and y23 are installed

*5: Setting Range ≤ 550 mVp-p
(≤ 64.2 Gbit/s, when the Options 003, y13 and y23 are installed)

*6: When PAM4 output signal is directly input to the ED, the lower limit for the error-free amplitude depends on the performance of the ED used.

When using MP1862A as ED, the lower limit for the error-free amplitude (reference data) is as follows:
125 mV (0/3 Level, ≤ 32.1 Gbaud, when the Option 001 is installed)
250 mV (0/3 Level, ≤ 58.2 Gbaud, when the Options 002, y12, 003, y13 and y23 are installed)
Pattern: PRBS15, at a constant temperature between 20 and 30°C

*7: Single-Ended, PAM4 0/3 Level, and when setting each of PAM4 Amplitude (3/2, 2/1 and 1/0) equally to 33%

*8: Setting Range ≤ 234 mVp-p, Single-Ended, at each amplitude level (Upper, Middle, Lower)

*9: Setting Range ≤ 234 mVp-p, Single-Ended, at each amplitude level (Upper, Middle, Lower)
(≤ 32.1 Gbit/s, when the Options 001, 002, y12, 003, y13 and y23 are installed)

*10: Setting Range ≤ 200 mVp-p, Single-Ended, at each amplitude level (Upper, Middle, Lower)
(≤ 58.2 Gbit/s, when the Options 002, y12, 003, y13 and y23 are installed

*11: Setting Range ≤ 184 mVp-p, Single-Ended, at each amplitude level (Upper, Middle, Lower), when using the J1790A coaxial cable (0.8m)
(≤ 64.2 Gbit/s, when the Options 003, y13 and y23 are installed)

*12: NRZ, 32.1 Gbit/s, Eye Amplitude 0.5 Vp-p (Single-Ended), only when Coding is NRZ and Emphasis is Off.

*13: NRZ, 58.2 Gbit/s (when the Options 002 and y12 are installed), 64.2 Gbit/s (when the Options 003, y13 and y23 are installed), Eye Amplitude 0.5 Vp-p (Single-Ended), only when Coding is NRZ and Emphasis is Off.

Table 1.3.1-11 Data Output (Cont'd)

Item	Specifications*1
Half Period Jitter	
Setting Range	–20 to +20, 1 step
Accuracy	Typ. ±0.04 UI*14
Jitter	
Measurement conditions	NRZ, Bit rate 32.1 Gbit/s (When the Option 001 is installed), 58.2 Gbit/s (When the Options 002 and y12 are installed), 64.2 Gbit/s (When the Options 003, y13 and y23 are installed) Eye Amplitude 0.5 Vp-p (Single-Ended) At a constant temperature between 20 and 30°C, measure with a 70-GHz bandwidth sampling oscilloscope with residual jitter of less than 200 fs (RMS).
Peak-to-Peak Jitter	Typ. 6 ps p-p (Count of measured jitters: 30)
Jitter RMS	Typ. 600 fs rms (Count of measured jitters: 30)
Intrinsic RJ (RMS)	Typ. 170 fs (Repeating pattern of 1,0) *15
Waveform Distortion (0-peak)	Typ. ±110 mV*16
PAM4 Level Separation Mismatch Ratio (R_{LM})	0.95 (min.) *17

*14: 2.4, 8, 16, 26.562 5, 32.1 Gbit/s (When the Option 001 is installed),
2.4, 8, 16, 26.562 5, 32.1, 40, 53.125, 58.2 Gbit/s (When the Options 002 and y12 are installed)
2.4, 8, 16, 26.562 5, 32.1, 40, 53.125 ,58.2 ,64.2 Gbit/s (When the Options 003, y13 and y23 are installed), Eye Amplitude 0.5 Vp-p (Single-Ended)

*15: NRZ, Bit rate 58.2 Gbit/s (When the Options 002 and y12 are installed),
64.2 Gbit/s (When the Options 003, y13 and y23 are installed)

*16: NRZ, Bit rate 32.1 Gbit/s (When the Option 001 is installed),
58.2 Gbit/s (When the Options 002 and y12 are installed),
64.2 Gbit/s (When the Options 003, y13 and y23 are installed)
Eye Amplitude 0.5 Vp-p (Single-Ended)

*17: PAM4, 26.5625 Gbaud (When the Option 001 is installed),
53.125 Gbaud (When the Options 002, y12, 003, y13 and y23 are installed),
1.0 Vp-p (Differential), refer to the IEEE P802.3bs for equation to calculate.

Table 1.3.1-11 Data Output (Cont'd)

Item	Specifications*1
PAM4 Signal to noise and distortion ratio (SNDR)	33 dB (min.) *18, *19
Electrical TDECQ	0.9 dB*20
Output ON/OFF	ON/OFF switching available
Data / XData Skew	±1 ps Cable error not included.
Termination	AC, DC switching For DC: GND, –2V, +1.3V, +3.3V, Open (LVDS), 50 Ω
Connector	V connector (f.)
Offset Reference	Vth
Level Guard	Amplitude, Voh and Vol can be set.
External ATT Factor	–40 to 0 dB, 0.1 dB step When the fixed attenuator is connected, the amplitude and offset of the signal output via the fixed attenuator are displayed.
Emphasis	When the Option x11 is installed
Emphasis Tap	4 (1post-cursor, 2pre-cursor) 4 Tap parameter values for all eyes (Upper, Middle and Lower) become identical. This means that 4 Tap parameters for Upper, Middle and Lower Eyes cannot be controlled independently.
Cursor Setting Range / Step	–20 to +20 dB, 0.01 dB step (Post-Cursor: $20\log_{10}Va/Vb$, Pre-Cursor: $20\log_{10}Vc/Vb$)  Provided that the maximum amplitude is restricted by the setting range of emphasis peak voltage.
Accuracy	Typ. ±1 dB (16 Gbaud, Amplitude 0.5 Vp-p (Single-Ended), De-Emphasis, Pre-Cursor1 = 6 dB, Post Cursor1 = 3.5 dB)
Setting Range of Emphasis Peak Voltage	70 to 800 mVp-p (Single-Ended)
Emphasis ON/OFF	ON/OFF switching

*18: PAM4, 26.5625 Gbaud (When the Option 001 is installed),
53.125 Gbaud (When the Options 002, y12, 003, y13 and y23 are installed),
1.0 Vp-p (Differential), refer to the IEEE P802.3cd for equation to calculate.

*19: 60-GHz bandwidth sampling oscilloscope

*20: 26.5625 Gbaud (When the Option 001 is installed),
53.125 Gbaud (When the Options 002, y12, 003, y13 and y23 are installed),
Using an equalizer, Single, Pattern: SSPRQ

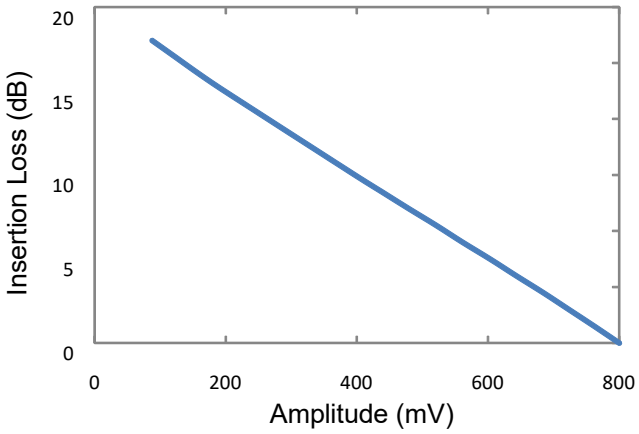
Table 1.3.1-11 Data Output (Cont'd)

Item	Specifications*1
Channel Emulator*21, *22	Normal: Outputs the PPG Data signal whose waveform emulates the connected transmission line with the loaded S parameter. Inverse: Outputs the PPG Data signal whose inverse characteristics emulate the transmission line with the loaded S parameter.
Response	Normal, Inverse
S-Parameter file	S2P file (Extension: "*.s2p"), S4P file (Extension: "*.s4p") Supports output files from the MS4640B Series Vector Network Analyzer.
Channel Emulator ON/OFF	ON/OFF switching
Gain Adjust	Adjusts the loss to emulate and loss of the loaded S parameter at the specified frequency, when Response is Normal. 0GHz, 1GHz, Nyquist Frequency switching
Adjustable ISI*21	Sets the loss of the channel which generates ISI and outputs the PPG data signal whose waveform emulates the setting.
Loss Channel	This is available for MU196020A in combination with the following. Not Specified: an external loss channel board J1800A×1 Short Channel: one J1800A (optional accessory) J1800A×2 Middle Channel: two J1800As (optional accessory) J1800A×3 Long Channel: three J1800As (optional accessory) J1758A: a J1758A (optional accessory) MU195050A Noise: an MU195050A Noise Module
Frequency	Insertion Loss can be set at Nyquist or 1/2 Nyquist Frequency.
Insertion Loss	Displays the absolute loss that is sum of the loss selected for Loss Channel and the setting value of Tuning Insertion Loss at Nyquist Frequency and 1/2 Nyquist Frequency.
Tuning Insertion Loss	The relative loss from the loss value of Loss Channel can be set. –8.00 to 8.00 dB, 0.01 dB step, Nyquist Frequency –8.00 to 8.00 dB, 0.01 dB step, 1/2 Nyquist Frequency
Insertion Loss Accuracy	±1.0 dB Nominal @Nyquist Frequency 6 dB, Repeating pattern of "1,0" *23, *25, *26 ±1.5 dB Nominal @Nyquist Frequency 6 dB, Repeating pattern of "1,0" *24, *25, *26 ±1.0 dB Nominal @1/2Nyquist Frequency 3 dB, Repeating pattern of "1,1,0,0" *23, *25, *26 ±1.5 dB Nominal @1/2Nyquist Frequency 3 dB, Repeating pattern of "1,1,0,0" *24, *25, *26
Adjustable ISI ON/OFF	ON/OFF switching

*21: When the Option x40 is installed.

*22: It is assumed to use for the purpose of compensating the loss of the transmission line.

The following graph shows typical limits for adjustable insertion loss. However, it does not mean that all the responses emulated from the S-Parameter file are compensated as the graph shows.



*23: Baud Rate 26.6 Gbaud (when Option 001, 002, y12, 003, y13, and y23 installed)

*24: Baud Rate 53.1 Gbaud (when Option 002, y12, Option 003, y13, and y23 installed)

*25: Eye Amplitude 0.5 Vp-p, at each spectrum, at a constant temperature between 20 and 30°C

*26: The frequency characteristics of Insertion Loss Accuracy when setting 6 dB@Nyquist Frequency and 3 dB@1/2 Nyquist Frequency are shown below.

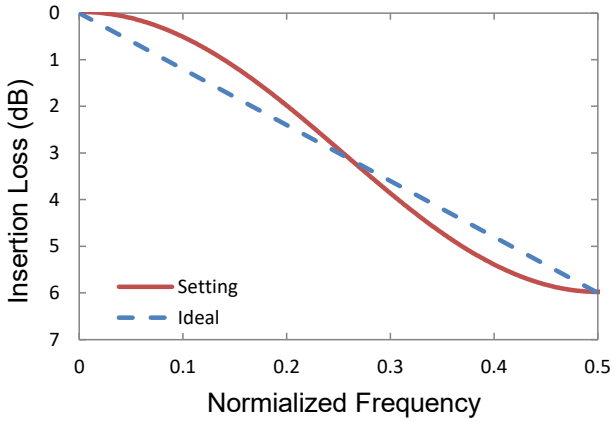


Table 1.3.1-12 Clock Output

Item	Specifications*
Frequency	
Full Rate	Operation Baud Rate = Clock Output Frequency 2.4 to 32.1 GHz (Option 001)
Half Rate	Operation Baud Rate = (Clock Output Frequency) × 2 1.2 to 16.05 GHz (Option 001) 1.2 to 29.1 GHz (When the Options 002 and y12 are installed) 1.2 to 32.1 GHz (When the Options 003, y13 and y23 are installed)
Quarter Rate	Operation Baud Rate = (Clock Output Frequency) × 4 0.6 to 8.025 GHz (Option 001) 0.6 to 14.55 GHz (When the Options 002 and y12 are installed) 0.6 to 16.05 GHz (When the Options 003, y13 and y23 are installed)
Number of Outputs	1
Amplitude	Min. 0.3 Vp-p, Max. 1.0 Vp-p (Output Frequency ≤ 16.05 GHz) Min. 0.4 Vp-p, Max. 1.0 Vp-p (Output Frequency > 16.05 GHz)
Output control	ON, OFF switching
Termination	50 Ω, AC Coupling
Connector	K connector (f.)

*: These values are monitored using an optional accessory (J1439A) at a sampling oscilloscope bandwidth of 70 GHz.

Table 1.3.1-13 Data Delay*1

Item	Specifications
Phase variable range	–1000 to +1000 mUI, 2 mUI step
Accuracy	±50 mUIp-p*2,*3,*4 ±100 mUIp-p*2,*3,*5
mUI – ps switching	Available (internally converted into ps)
Calibration	Available (when jitter modulation is off)
Calibration indicator	This is displayed when one of the following conditions is met: ● 1/1 Clock frequency change by ±250 kHz. ● Ambient temperature change by ±5°C.

*1: When the Option x30 is installed.

*2: Measured with a sampling oscilloscope with residual jitter of less than 200 fs (RMS), at a constant amplitude setting.

*3: Typical value

*4: Baud rate ≤ 32.1 Gbaud

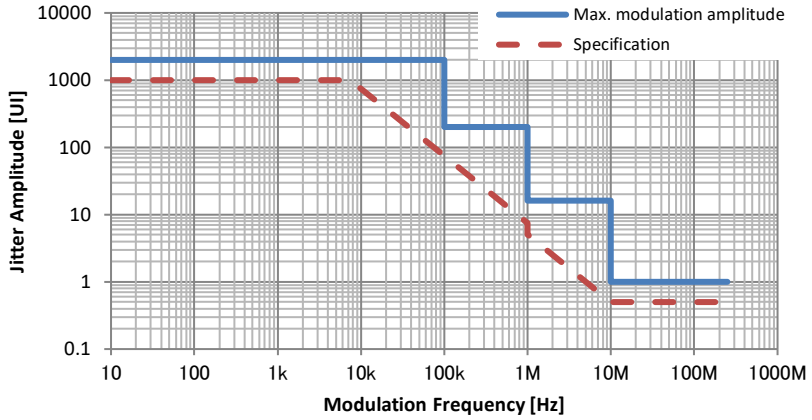
*5: Baud rate > 32.1 Gbaud

Table 1.3.1-14 Jitter tolerance

Item	Specifications
Jitter tolerance	For NRZ output, Bit rate: 32.1 Gbit/s (Option 001) 58.2 Gbit/s (When the Options 002 and y12 are installed) 64.2 Gbit/s (When the Options 003, y13 and y23 are installed) Pattern: PRBS2^{31}–1 With MU181500B, SSC with frequency of 33 kHz and deviation of 5300 ppm can be applied simultaneously with RJ with amplitude of 0.3 UI. These specifications are defined assuming the following conditions: Loopback connection to MU196040A (32.1 Gbit/s) or MP1862A + MU183040B (58.2 Gbit/s, 64.2 Gbit/s), at a constant temperature between 20 and 30°C . When RJ + BUJ is bigger than 0.5 UIp-p or SJ1 + Built-in SJ2 + RJ + BUJ is bigger than the standard value + 0.3 UIp-p, “Overload” is displayed on the MU181500B screen. For details on the maximum modulation jitter that depends on the bit rate, refer to “Table 1.3.1-2 Jitter Setting Range”. 32.1 Gbit/s  **Modulation frequency [Hz] / Max. modulation amplitude [UIp-p] / Specification [UIp-p]** 10 — 2 000 — 2 000 7 500 — 2 000 — 2 000 100 000 — 2 000 — 150 1 000 000 — 200 — 15 10 000 000 — 16 — 1 250 000 000 — 1 — 1

Table 1.3.1-14 Jitter tolerance (Cont'd)

Item	Specifications
Jitter tolerance mask (Cont'd)	58.2 Gbit/s, 64.2 Gbit/s



Modulation frequency [Hz]	Max. modulation amplitude [UIp-p]	Specification [UIp-p]
10	2 000	1 000
7 500	2 000	1 000
100 000	2 000	75
1 000 000	200	7.5
10 000 000	16	0.5
250 000 000	1	0.5

Table 1.3.1-15 Multichannel Operation*1

Item	Specifications
Multi-Module Synchronization	A function to synchronize timing of generating patterns among multiple modules*2, *3, *4, *5, *6 Baud Rate ≤ 32.1 Gbaud: Capable of synchronizing bit generation timing with an accuracy of less than 1 UI Baud Rate > 32.1 Gbaud: Capable of synchronizing bit generation timing with an accuracy of less than 5 UI
Inter-Module 2ch Combination	This is available only for NRZ. Generates signals of which the first bit generation timing is synchronized between modules. And, generates signals with the bit-interleaved generation bit patterns between modules. Slot1 Data 1 3 5 7 Slot2 Data 2 4 6 8
Inter-Module CH Synchronization	Generates signals of which the first bit generation timing is synchronized between modules. Slot1 Data 1 2 3 4 Slot2, 3, 4 Data 1 2 3 4

*1: When the Option x30 and x50 are installed.

*2: The following options must be the same among the modules to be synchronized.

Option 001
Option 002 or y12
Option 003, y13, or y23

*3: Slot 1 to 2: Inter-Module 2ch Combination (only for NRZ)

*4: Slot 1 to 4: Inter-Module CH Synchronization

*5: The modules to be synchronized must be installed successively from Slot 1.

*6: In the range of ±3°C from the temperature when performing the Multi Channel Calibration function, the bit generation timing is guaranteed.

Table 1.3.1-15 Multichannel Operation*1 (Cont'd)

Item	Specifications
Output Phase setting range Phase setting resolution	Only the items to be changed when Multi-Module Synchronization is set are described. –64 000 to +64 000 mUI*7 2 mUI*7
Pattern Data length	 When CH Combination is set: 4 to 536,870,912 bits, 2 bits step When CH Synchronization is set: same as Sync OFF
Unit Sync*8, *9	ON/OFF switching available
Number of Units	Synchronous control available between up to two MP1900As. Synchronous control of up to 8 channels is available with two MP1900As each installed with four MU196020As.
Unit Sync Output*10	To output a timing signal from the Gating Out connector when **Unit Sync** is touched Provided with an inter-unit synchronization status indicator. The status indicator at Unit Sync turns orange when it requires to be timed to the other.
Unit Sync Input*10	To input a timing signal from the AUX In connector
Bit phase difference between MP1900As	Within ±1024 UI Timing difference between bit generations that occurs when **Unit Sync** is touched 
*7: Each channel can be set independently.

*8: Available on MX190000A version 3.02.00 or later.

*9: Available only when using inter-module synchronization.

*10: Available only when **Unit Sync** is **ON**.

Table 1.3.1-16 General

Item	Specifications
Dimensions	21 mm (H), 234 mm (W), 175 mm (D) Excluding protrusions
Mass	2.5 kg max.
Operating Temperature	15 to 30°C MP1900A's ambient temperature. MU196020A shall operate when installed.
Storage Temperature	–20 to 60°C MU196020A installed to MP1900A shall comply with MIL-T-28800E Class 5.

Table 1.3.1-17 Extended Functions

Item	Specifications
PCIe	Supports the following PCIe tests when controlled by the MX183000A. The supported installer versions are: • MX190000A V4.09.00 or later • MX183000A V4.09.00 or later
Applicable Standards	PCI Express Base Specification Revision 4.0 Version1.0 PCI Express Base Specification Revision 5.0 Version1.0 Bit rate: PCIe 1/2/3/4/5 Number of lanes: x1 Subjects of Testing: Root Complex, End Point
Required Options	Option x11
Required Software	MX183000A-PL021: Can support negotiation with the DUT and can put the DUT into Loopback state according to the LTSSM of PCIe 1 to PCIe 4. State transition of LTSSM can be analyzed as a log.(One MU196020A and one MU195040A are required.) MX183000A-PL025: Can extend the functionality of the PL021 option to PCIe 5. When the MX183000A-PL001 is installed in addition to the MX183000A-PL021 and MX183000A-PL025, the MX183000A can control the MU196020A, MU181500B, and MU195040A and support Jitter Tolerance Test.

1.3.2 Specifications for MU196040A

Table 1.3.2-1 Operating Baud Rate

Item	Specifications
Operating Baud Rate	When the Option 001 is installed. PAM4 input: 2.4 to 32.1 Gbaud NRZ input: 2.4 to 32.1 Gbit/s

Table 1.3.2-2 System Clock

Item	Specifications
System Clock	External, Recovered Clock (When the Option 022 is installed) External: Clock input from the Ext Clock Input connector Recovered Clock: Clock recovered from the data input from the Data Input connector

Table 1.3.2-3 Data Input

Item	Specifications
Number of inputs	2 (Data, XData) (Differential)
Input Condition	Single-Ended, Differential 50 Ohm, Differential 100 Ohm When set to Differential 50 Ohm or Differential 100 Ohm: Independent, Tracking, Alternate*1 When set to Alternate: Data-XData, XData-Data*2 When set to Single-Ended: Data, XData*3
Signal Type LSB/MSB Diagnostics	NRZ, PAM4 When set to PAM4, the PAM4 mode can be switched between as follows: Diagnostics Mode OFF: Treats signals as symbols by receiving LSB and MSB while synchronizing them with each other. Diagnostics Mode ON: Asynchronously receives LSB and MSB.
Amplitude	NRZ: The range in which the Auto Adjust function operates. PAM4: The range in which the Auto Search PAM4 Fine function operates. NRZ: 0.05 to 1.0 Vp-p*4 PAM4: 0.3 to 1.0 Vp-p*5
Threshold	NRZ, PAM4 Middle Eye Threshold: –3.5 to +3.3 V, 1 mV step *2, *6 PAM4 Upper Eye Threshold: –3.9 to +3.7 V, 1 mV step *7 PAM4 Lower Eye Threshold: –3.9 to +3.7 V, 1 mV step *7

*1: Tracking is available only for NRZ.

*2: The absolute value of the difference between Data and XData Threshold values shall be 1.5 V or less.

*3: PAM4 Upper Eye and Lower Eye can be set by relative values to Middle Eye in the range of –0.4 V to +0.4 V.

*4: Single-Ended, Differential

*5: 0/3 Level, PRBS31, Single-Ended, Differential, when connecting directly to the MU196020A.

*6: Data and XData can be set independently.

*7: Data and XData cannot be set independently, and can be set in the range of ±0.4 V from Middle Eye Threshold.

Table 1.3.2-3 Data Input (Cont'd)

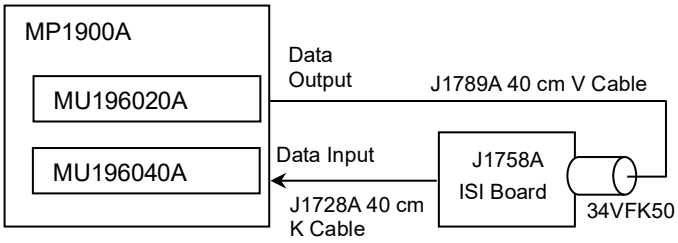
Item	Specifications
Sensitivity	Single-Ended , Mark Ratio1/2, when connecting directly to the MU196020A with J1789A. When the Option-001 is installed, 34VKF50 shall be included. At a constant temperature between 20 and 30°C
Eye Amplitude	NRZ, PRBS31 Typ. 32 mVp-p, ≤ 50 mVp-p*8 (26.5625 Gbit/s, 32.1 Gbit/s)
Eye Height	NRZ, PRBS31 Typ. 23 mV*8 (26.5625 Gbit/s, 32.1 Gbit/s) PAM4 0/1 1/2 2/3 Level, PRBS31, Eye Height where BER is 1E–06, when using External Clock Typ. 23 mV, ≤ 50 mV*8 (26.5625 Gbaud, 32.1 Gbaud)
Phase Margin	When connecting directly to the MU196020A with J1789A. When the Option-001 is installed, 34VKF50 shall be included. At a constant temperature between 20 and 30°C, when using External Clock NRZ, PRBS31, Differential, Mark Ratio 1/2, when inputting 1.0 Vp-p Typ. 25.8 ps*8 (26.5625 Gbit/s) Typ. 18.0 ps*8 (32.1 Gbit/s) PAM4 0/3 Level, Eye Width where BER is 1E–06, PRBS31, Single-Ended, Mark Ratio1/2, when inputting 0.5 Vp-p, Emphasis ON (Best values in the range of 1Pre ≤ 5 dB and 1Post ≤ 5 dB) Typ. 5.3 ps*8 (26.5625 Gbaud) Typ. 4.5 ps*8 (32.1 Gbaud)

*8: When the Option 001 is installed.

Table 1.3.2-3 Data Input (Cont'd)

Item	Specifications
Stressed Margin*9	
Stressed Eye Height	PAM4 0/1 1/2 2/3 Level, QPRBS13-CEI, Eye Height where BER is 1E–06, when using External Clock ≥ 32 mV*10
Stressed Eye Width	PAM4 0/1 1/2 2/3 Level, QPRBS13-CEI, Eye Width where BER is 1E–06, when using External Clock ≥ 7.15 ps*10
Termination	50 Ω, GND, Variable
Termination Voltage	When set to Variable: –2.5 to +3.5 V, 10 mV step
Connector	K connector (f.) (When the Option 001 is installed)

*9: Differential, Mark Ratio1/2, when connecting J1758A and MU196020A by using J1789A, 34VKF50 and J1728A.



At a constant temperature between 20 and 30°C, measure with a 70-GHz bandwidth sampling oscilloscope with residual jitter of less than 200 fs (RMS).

Adjust De-Emphasis (2 Pre Cursors and 1 Post Cursor) of MU196020A so that the product of Eye Height (1E–06) and Eye Width (1E–06) can be maximized in the differential waveform.

Calculate the 4th-order Bessel Filter (Cutoff Frequency 50 GHz) + CTLE (+1 dB Peaking at 14 GHz) and calibrate it to a PAM4 waveform with Eye Amplitude of 0.88 Vp-p (Diff) or less and Eye Linearity RLM 0.85 or more.

*10: 28 Gbaud, when the Option 001 is installed, BER 1E–12

Table 1.3.2-4 Clock Input

Item	Specifications
External Clock Input	Operation Baud Rate = Clock Input Frequency (When the Option 001 is installed)
Number of inputs	1 (Single-Ended)
Frequency range	When the Option 001 is installed: 2.4 to 32.1 GHz
Amplitude	0.3 to 1.0 Vp-p (–6.5 to +4.0 dBm) (Input Frequency ≤ 16.05 GHz) 0.4 to 1.0 Vp-p (–3.9 to +4.0 dBm) (Input Frequency > 16.05 GHz)
Termination	50 Ω, AC Coupling
Connector	K connector (f.)

Table 1.3.2-5 Aux Input

Item	Specifications
Number of inputs	1 (Single-Ended)
Variation	External Mask, Burst
Minimum pulse width	1/256 of Data rate
Input level	• 0/–1 V (H: –0.25 to 0.05 V, L: –1.1 to –0.8 V) • 0/–0.5 V (H: –0.05 to 0.05 V, L: –0.55 to –0.45 V) • Vth 0 V (Input amplitude 0.5 to 1.0 Vp-p) Select one of the above.
Termination	50 Ω, GND
Connector	SMA connector (f.)

Table 1.3.2-6 Aux Output

Item	Specifications
Number of outputs	2 (Differential)
Variation	1/n Clock (n = 8, 12, 16, 20…1020, 1024), Pattern Sync, Sync Gain, Error Output
Pattern Sync PRBS, PRGM	Position: 1 to {(Least common multiple of Pattern Length' and 128) – 135}, 8 step (When the Option 001 is installed) Pattern Length' shall be the value obtained by multiplying Pattern Length setting until it becomes 1024 or more if it is 1023 or less.
Output level	0/–0.6 V (H: –0.25 to 0.05V, L: –0.80 to –0.45 V)
Termination	50 Ω, GND
Connector	SMA connector (f.)

Table 1.3.2-7 Pattern Detection

Item	Specifications
PRBS	
Pattern length	2^n-1 (n = 7, 9, 10, 11, 13, 15, 20, 23, 31)
Mark ratio	1/2, 1/2inv
PRBS generator polynomial	n=7: $1 + X^6 + X^7$ n=9: $1 + X^5 + X^9$ n=10: $1 + X^7 + X^{10}$ n=11: $1 + X^9 + X^{11}$ n=13: $1 + X + X^2 + X^{12} + X^{13}$ n=15: $1 + X^{14} + X^{15}$ n=20: $1 + X^3 + X^{20}$ n=23: $1 + X^{18} + X^{23}$ n=31: $1 + X^{28} + X^{31}$
PRBS Inversion	This is available in PAM4 mode only. Logically inverted PRBS can be set independently for MSB and LSB.
Zero-Substitution	This is available in NRZ mode only.
Additional Bit	0 bit, 1 bit
Pattern length	2^n or 2^n-1 (n = 7, 9, 10, 11, 15, 20, 23)
Start position	Substitutes the bit coming after the maximum “0” successive bits.
Zero-Length	1 to (Pattern Length–1) bits If the bit coming after Zero-substitution is “0,” then it is replaced with “1.”
Data	
Data length	NRZ: 2 to 268 435 456 bits, 1 bit step PAM4: 2 to 268 435 456 symbols, 1 symbol step
Coding	NRZ, PAM4
NRZ	Normal, Invert
PAM4 Gray Coding	ON, OFF
PAM4 Precoding (1/(1 + D) mod 4)*	ON, OFF
PAM4 Standard Pattern	Standard-compliant PAM4-mode patterns
CEI	QPRBS13-CEI, QPRBS31-CEI
IEEE	IEEE802.3bs/cd: PRBS13Q, PRBS31Q, SSPRQ, Square Wave IEEE802.3bj: QPRBS13, JP03A, JP03B, Transmitter Linearity
InfiniBand	PRBS13Q (InfiniBand), PRBS23Q, PRBS31Q (InfiniBand)
Fibre Channel	PRBS31Q (Fibre Channel)
NRZ Standard Pattern	Standard-compliant NRZ-mode pattern
CEI	SSPR

*: (1/(1+D) mod 4) is a generator polynomial defined in the IEEE802.3.

Table 1.3.2-8 Pattern Sequence

Item	Specifications
Sequence	Repeat, Burst
Repeat	Continuous Pattern
Burst	This is available only when Coding is NRZ.
Source	Internal, External-Enable (Aux Input), External-Trigger (Aux Input)
Delay	Internal: 0 to 2 147 483 640 bits, 8 bits step Ext Trigger, Enable: 0 to 2 147 483 520 bits, 8 bits step Adjust Method: Auto, Manual
Enable Period	Internal: 12 800 to 2 147 482 624 bits, 256 bits step Ext Trigger: 12 800 to 2 147 483 136 bits, 256 bits step
Burst Cycle	25 600 to 2 147 483 648 bits, 1024 bits step

Table 1.3.2-10 Error Analysis

Item	Specifications
Block Window Setting resolution	Excludes the specified data pattern from measurement. Pattern length (bits) — Step (bits) 2 to 2 097 152 — 1 2 097 153 to 4 194 304 — 2 4 194 305 to 8 388 608 — 4 8 388 609 to 16 777 216 — 8 16 777 217 to 33 554 432 — 16 33 554 433 to 67 108 864 — 32 67 108 865 to 134 217 728 — 64 134 217 729 to 268 435 456 — 128
Bit Window	Excludes any channels among internal 32 channels from measurement. (Available only in NRZ mode.)
External Mask	H: Measurement L: Mask

Table 1.3.2-11 Auto Measurement

Item	Specifications
Auto Adjust	NRZ: Vth direction only (Phase direction not supported.)*1 PAM4: MSB Vth direction only (Phase direction not supported.)*1, *2
Auto Search	NRZ: Available*1 PAM4 (LSB/MSB Diagnostics OFF/ON): Available*1, *2

*1: PRBS Pattern, Mark Ratio 1/2

*2: Each of amplitudes shall be equal.

Table 1.3.2-12 Variable Clock Delay

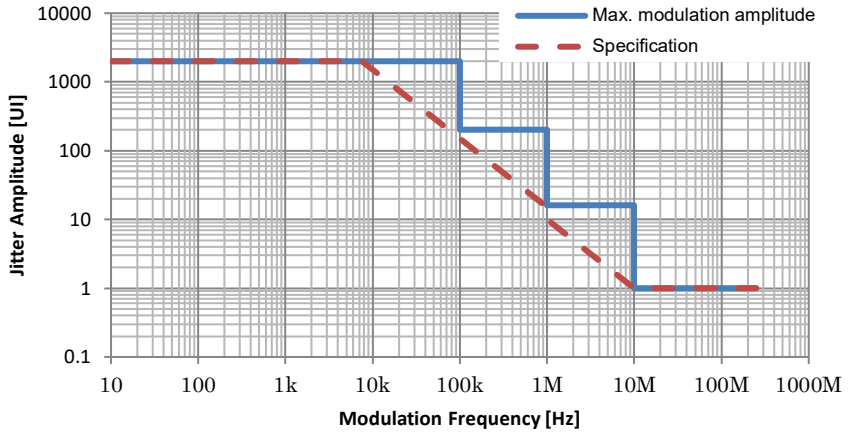
Item	Specifications
Phase variable range	–1000 to +1000 mUI, 2 mUI step
Accuracy	±50 mUIp-p*1,*2
mUI – ps switching	Available (internally converted into ps)
Calibration	Available (when jitter modulation is off)
Calibration indicator	This indicator is on when Calibration is required due to: ● Change in 1/1Clock frequency by ±250 kHz. ● Change in the ambient temperature by ±5°C.

*1: Measure using an oscilloscope with residual jitter of less than 200 fs (RMS).

*2: Typical value

Table 1.3.2-13 Jitter Tolerance

Item	Specifications
Jitter tolerance	For NRZ output Bit rate: 32.1 Gbit/s Pattern: PRBS2^{31}–1 With MU181500B, SSC with frequency of 33 kHz and deviation of 5300 ppm can be applied simultaneously with RJ with amplitude of 0.3 UI. These specifications are defined assuming the following conditions: Loopback connection to the MU196020A, at a constant temperature between 20 and 30°C. When RJ+BUJ is bigger than 0.5 UIp-p or SJ + RJ + BUJ is bigger than the standard value + 0.3 UIp-p, "Overload" is displayed on the MU181500B screen.



Modulation frequency [Hz]	Max. modulation amplitude [UIp-p]	Specification [UIp-p]
10	2 000	2 000
7 500	2 000	2 000
100 000	2 000	150
1 000 000	200	15
10 000 000	16	1
250 000 000	1	1

Item	Specifications
System Clock	External, Recovered Clock (When the Option x21, x22, x23, or y24 is installed) External: Clock input from the Ext Clock Input connector For PAM4, select from 2.4 to 32.1 Gbaud, 32.1 to 58.2 Gbaud and Auto. For NRZ, select from 2.4 to 32.1 Gbit/s, 32.1 to 64.2 Gbit/s and Auto. Recovered Clock: Clock recovered from the data input from the Data Input connector

Table 1.3.3-3 Data Input

Item	Specifications
Number of inputs	2 (Data, XData) (Differential)
Input Condition	Single-Ended, Differential 50 Ohm, Differential 100 Ohm When set to Differential 50 Ohm or Differential 100 Ohm: Independent, Tracking, Alternate*1 When set to Alternate: Data-XData, XData-Data*2 When set to Single-Ended: Data, XData*3
Signal Type LSB/MSB Diagnostics	NRZ, PAM4 When set to PAM4, the PAM4 mode can be switched between as follows: Diagnostics Mode OFF: Treats signals as symbols by receiving LSB and MSB while synchronizing them with each other. Diagnostics Mode ON: Asynchronously receives LSB and MSB.
Amplitude	NRZ: The range in which the Auto Adjust function and the Auto Search function operate. 0.05 to 1.0 Vp-p*4,*5 0.1 to 1.0 Vp-p*4,*6 PAM4: The range in which the Auto Search PAM4 Fine function operates. 0.3 to 1.0 Vp-p*7,*8 0.4 to 1.0 Vp-p*7,*9
Threshold	NRZ, PAM4 Middle Eye Threshold: –3.5 to +3.3 V, 1 mV step *2,*10 PAM4 Upper Eye Threshold: –3.9 to +3.7 V, 1 mV step *11 PAM4 Lower Eye Threshold: –3.9 to +3.7 V, 1 mV step *11

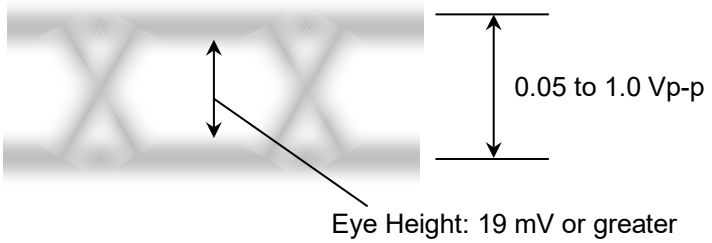
*1: Tracking is available only for NRZ.

*2: The absolute value of the difference between Data and XData Threshold values shall be 1.5 V or less.

*3: PAM4 Upper Eye and Lower Eye can be set by relative values to Middle Eye in the range of –0.4 V to +0.4 V.

*4: Single-Ended, Differential, Mark Ratio1/2, the Eye Height shall meet the specification.

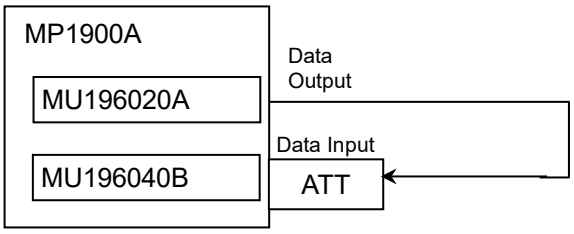
Example of waveform input to MU196040B when bit rate is 32.1 Gbit/s



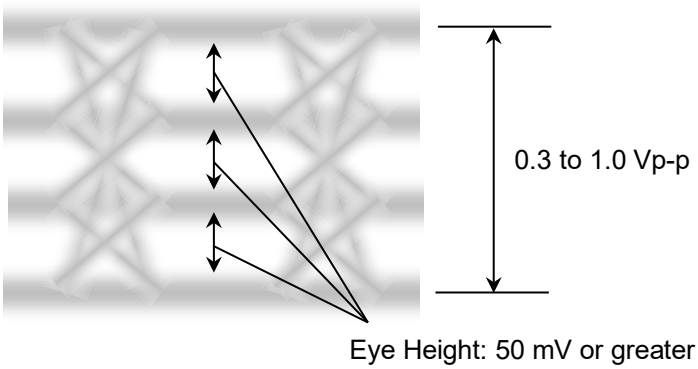
*5: Bit rate ≤32.1 Gbit/s

*6: Bit rate >32.1 Gbit/s

*7: 0/3 Level, PRBS31, Mark Ratio1/2, with connected to the MU196020A using an attenuator, with Emphasis adjusted so that the Eye Height meets the specification



Example of waveform input to MU196040B when baud rate is 32.1 Gbaud



*8: Single-Ended, Differential, Baud rate ≤32.1 Gbaud

*9: Differential, Baud rate >32.1 Gbaud

*10: Data and XData can be set independently.

*11: Data and XData cannot be set independently, and can be set in the range of ±0.4 V from Middle Eye Threshold.

Table 1.3.3-3 Data Input (Cont'd)

Item	Specifications
Sensitivity	Single-Ended , Mark Ratio1/2, PRBS31, when connecting directly to the MU196020A using J1789A and an attenuator, Emphasis ON, unused connectors on the MU196020A and MU196040B are terminated, At a constant temperature between 20 and 30°C
Eye Amplitude	NRZ Typ. 25 mVp-p, ≤ 50 mVp-p*12 (26.5625 Gbit/s, 32.1 Gbit/s) Typ. 31 mVp-p, ≤ 55 mVp-p*13 (53.125 Gbit/s) Typ. 43 mVp-p, ≤ 60 mVp-p*13 (64.2 Gbit/s)
Eye Height	NRZ Typ. 19 mV*12 (26.5625 Gbit/s, 32.1 Gbit/s) Typ. 21 mV*13 (53.125 Gbit/s) Typ. 32 mV*13 (64.2 Gbit/s) PAM4 0/1 1/2 2/3 Level, PRBS31, when using External Clock Typ. 23 mV, ≤ 50 mV*12 (26.5625 Gbaud, 32.1 Gbaud) Typ. 36 mV, ≤ 60 mV*13 (53.125 Gbaud) Typ. 49 mV, ≤ 70 mV*13 (58.2 Gbaud) Note that 53.125 Gbaud and 58.2 Gbaud are defined by the Eye Height value that results in a differential waveform having BER of 1E-06 by changing the test pattern to QPRBS13-CEI after setting the test pattern to PRBS31 and setting the amplitude value.
Phase Margin	Differential, Mark Ratio 1/2, PRBS31, when inputting 0.5 Vp-p, when connecting directly to the MU196020A using J1789A and an attenuator. At a constant temperature between 20 and 30°C, when using External Clock NRZ*14 Typ. 25.8 ps*12 (26.5625 Gbit/s) Typ. 18.0 ps*12 (32.1 Gbit/s) Typ. 10.5 ps*13 (53.125 Gbit/s) Typ. 8.7 ps*13 (64.2 Gbit/s) PAM4 Typ. 5.3 ps*12 (26.5625 Gbaud) Typ. 4.5 ps*12 (32.1 Gbaud) Typ. 4.1 ps*13,*14 (53.125 Gbaud) Typ. 2.5 ps*13,*14 (58.2 Gbaud)

*12: When the Option 001, 002, or y12 is installed.

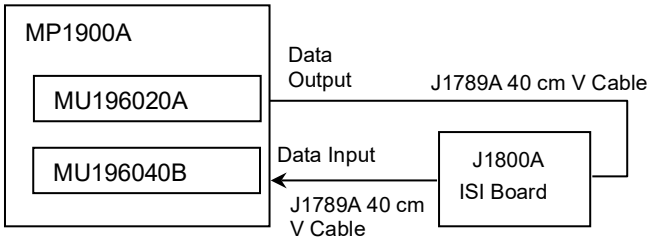
*13: When the Option 002 or y12 is installed.

*14: Value including RJ equivalent to BER 1E–12 of input signal

Table 1.3.3-3 Data Input (Cont'd)

Item	Specifications
Stressed Margin	
Stressed Eye Height	PAM4 0/1 1/2 2/3 Level, QPRBS13-CEI, Eye Height where BER is 1E–06, when using External Clock ≥ 32 mV*15,*16 ≥ 37 mV*17,*18
Stressed Eye Width	PAM4 0/1 1/2 2/3 Level, QPRBS13-CEI, Eye Width where BER is 1E–06, when using External Clock ≥ 7.53 ps*15,*16 ≥ 3.76 ps*17,*18
Termination	50 Ω, GND, Variable
Termination Voltage	When set to Variable: –2.5 to +3.5 V, 10 mV step
Connector	V connector (f.)
Decision Feedback Equalizer	With a built-in Decision Feedback Equalizer (DFE)*19
Tap	1
Coefficient	
Setting Range	0 to 30, 1 step
Loss Compensation	Nom. 1.4 dB*20
Low Frequency Equalizer	With a built-in Low Frequency Equalizer *19
Gain	
Setting Range	–2.0 to 0 dB, 0.5 dB step
Accuracy	Typ. ±1.0 dB
Ideal Frequency Response	
*15: 26.5625 Gbaud, when installed with the Option 001, 002 or y12 and the Option z11, BER 1E–12

*16: 26.5625 Gbaud, Differential, Mark Ratio1/2, when J1789A is used to connect J1800A (1 pc) and MU196020A



At a constant temperature between 20 and 30°C, measure with a 70-GHz bandwidth sampling oscilloscope with residual jitter of less than 200 fs (RMS).

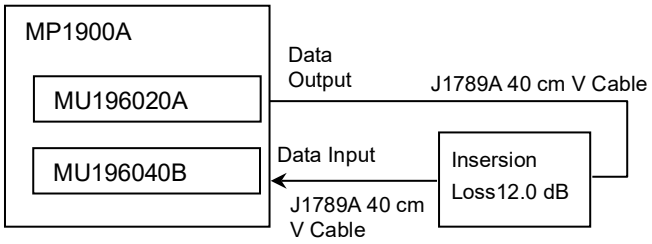
Adjust De-Emphasis (2 Pre Cursors and 1 Post Cursor) of MU196020A so that the product of Eye Height (1E–06) and Eye Width (1E–06) can be maximized in the differential waveform.

Calculate the 4th-order Bessel Filter (Cutoff Frequency 40 GHz) + CTLE (+1 dB Peaking at 14 GHz) and calibrate it to a PAM4 waveform with Eye Amplitude of 0.88 Vp-p (Diff) or less and Eye Linearity R_{LM} 0.85 or more.

Activate the DFE and Low Frequency Equalizer in the MU196040B, and perform adjustment.

*17: 53.125 Gbaud, when the Option 002, y12 and z11 are installed, BER 1E–8 nom.

*18: 53.125 Gbaud, Differential, Mark Ratio1/2, when connecting a device with 12.0 dB insertion loss and MU196020A.



At a constant temperature between 20 and 30°C, measure with a 70-GHz bandwidth sampling oscilloscope with residual jitter of less than 200 fs (RMS).

Adjust De-Emphasis (2 Pre Cursors and 1 Post Cursor) of MU196020A so that the product of Eye Height (1E–06) and Eye Width (1E–06) can be maximized in the differential waveform.

Calculate the 4th-order Bessel Filter (Cutoff Frequency 43 GHz) + CTLE (+1 dB Peaking at 28 GHz) and calibrate it to a PAM4 waveform with Eye Amplitude of 0.88 Vp-p (Diff) or less and Eye Linearity R_{LM} 0.85 or more.

Activate the DFE and Low Frequency Equalizer in the MU196040B, and perform adjustment.

*19: When the Option z11 is installed.

*20: 53.125 Gbaud, Calculated from the following three:

- The BER result obtained when DFE is OFF under the condition of *18.
- The BER result obtained when DFE is OFF under the condition of *18 and 1.8 dB additional loss.
- The best BER result obtained when DFE is ON under the condition of *18 and 1.8 dB additional loss.

Table 1.3.3-4 Clock Input

Item	Specifications
External Clock Input	Operation Baud Rate = Clock Input Frequency × 2
Number of inputs	1 (Single-Ended)
Frequency range	1.2 to 32.1 GHz
Amplitude	0.3 to 1.0 Vp-p (–6.5 to +4.0 dBm) (Input Frequency ≤ 16.05 GHz) 0.4 to 1.0 Vp-p (–3.9 to +4.0 dBm) (Input Frequency > 16.05 GHz)
Termination	50 Ω, AC Coupling
Connector	K connector (f.)

Table 1.3.3-5 Aux Input

Item	Specifications
Number of inputs	1 (Single-Ended)
Variation	External Mask, Burst, Capture External Trigger
Minimum pulse width	1/256 of Data rate
Input level	● 0/–1 V (H: –0.25 to 0.05 V, L: –1.1 to –0.8 V) ● 0/–0.5 V (H: –0.05 to 0.05 V, L: –0.55 to –0.45 V) ● Vth 0 V (Input amplitude 0.5 to 1.0 Vp-p) Select one of the above.
Termination	50 Ω, GND
Connector	SMA connector (f.)

Table 1.3.3-6 Aux Output

Item	Specifications
Number of outputs	2 (Differential)
Variation	1/n Clock (n = 8, 12, 16, 20…1020, 1024), Pattern Sync, Sync Gain, Error Output, Capture Trigger
Pattern Sync PRBS, PRGM	Position: 1 to {(Least common multiple of Pattern Length' and 256) – 263}, 8 steps (When the Option 001 is installed) Pattern Length' shall be the value obtained by multiplying Pattern Length setting until it becomes 1024 or more if it is 1023 or less.
Output level	0/–0.6 V (H: –0.25 to 0.05V, L: –0.80 to –0.45 V)
Termination	50 Ω, GND
Connector	SMA connector (f.)

Table 1.3.3-7 Pattern Detection

Item	Specifications
PRBS	
Pattern length	2^n-1 (n = 7, 9, 10, 11, 13, 15, 20, 23, 31)
Mark ratio	1/2, 1/2inv
PRBS generator polynomial	n=7: $1 + X^6 + X^7$ n=9: $1 + X^5 + X^9$ n=10: $1 + X^7 + X^{10}$ n=11: $1 + X^9 + X^{11}$ n=13: $1 + X + X^2 + X^{12} + X^{13}$ n=15: $1 + X^{14} + X^{15}$ n=20: $1 + X^3 + X^{20}$ n=23: $1 + X^{18} + X^{23}$ n=31: $1 + X^{28} + X^{31}$
PRBS Inversion	This is available in PAM4 mode only. Logically inverted PRBS can be set independently for MSB and LSB.
Zero-Substitution	This is available in NRZ mode only.
Additional Bit	0 bit, 1 bit
Pattern length	2^n or 2^n-1 (n = 7, 9, 10, 11, 15, 20, 23)
Start position	Substitutes the bit coming after the maximum “0” successive bits.
Zero-Length	1 to (Pattern Length–1) bits If the bit coming after Zero-substitution is “0,” then it is replaced with “1.”
Data	
Data length	NRZ: 2 to 268 435 456 bits, 1 bit step PAM4: 2 to 268 435 456 symbols, 1 symbol step
Coding	NRZ, PAM4
NRZ	Normal, Invert
PAM4 Gray Coding	ON, OFF
PAM4 Precoding (1/(1 + D) mod 4)*	ON, OFF
PAM4 Standard Pattern	Standard-compliant PAM4-mode patterns
CEI	QPRBS13-CEI, QPRBS31-CEI
IEEE	IEEE802.3bs/cd: PRBS13Q, PRBS31Q, SSPRQ, Square Wave IEEE802.3bj: QPRBS13, JP03A, JP03B, Transmitter Linearity
InfiniBand	PRBS13Q (InfiniBand), PRBS23Q, PRBS31Q (InfiniBand)
Fibre Channel	PRBS31Q (Fibre Channel)
NRZ Standard Pattern	Standard-compliant NRZ-mode pattern
CEI	SSPR

*: (1/(1+D) mod 4) is a generator polynomial defined in the IEEE802.3.

Table 1.3.3-8 Pattern Sequence

Item	Specifications
Sequence	Repeat, Burst
Repeat	Continuous Pattern
Burst	This is available only when Coding is NRZ.
Source	Internal, External-Enable (Aux Input), External-Trigger (Aux Input)
Delay	Internal: 0 to 2 147 483 640 bits, 8 bits step Ext Trigger, Enable: 0 to 2 147 483 520 bits, 8 bits step Adjust Method: Auto, Manual
Enable Period	Internal: 12 800 to 2 147 482 624 bits, 256 bits step Ext Trigger: 12 800 to 2 147 483 136 bits, 256 bits step
Burst Cycle	25 600 to 2 147 483 648 bits, 1024 bits step

Table 1.3.3-9 Measurement (Cont'd)

Item	Specifications	
Gating	Time, Clock Count, Error Count	
Gating Unit	Time:	1 second to 99 days 23 hours 59 minute 59 seconds
	Clock Count:	>E+4 to >E+16
	Error Count:	>E+4 to >E+16
Cycle	Single, Repeat, Untimed	
Current	On, Off can be set.	
	Calculation:	Progressive, Immediate
	Interval:	100 ms, 200 ms
Auto Sync	On, Off can be set.	
	Synchronization threshold:	INT, E–2 to E–8
Sync Control	PRBS:	Automatic Synchronization
	Data:	Frame On
Frame Length	NRZ:	4 to 64 bits, 4 bits step
	PAM4:	4 to 64 symbols, 4 symbols step
Frame Mask	Available	
Frame Position	NRZ:	1 to (Pattern Length – Frame Length +1) bits, 1 bit step
	PAM4:	1 to (Pattern Length – Frame Length +1) symbols, 1 symbol step
Error/Alarm Conditions		
Error Detection	NRZ: Insertion/Omission, Transition/Non Transition	
	PAM4: Not available	
EI/EFI Interval	1 ms, 10 ms, 100 ms, 1 s	

Table 1.3.3-10 Error Analysis

Item	Specifications
Block Window	Excludes the specified data pattern from measurement.
Setting resolution	Pattern length (bits) / Step (bits) 2 to 2 097 152 / 1 2 097 153 to 4 194 304 / 2 4 194 305 to 8 388 608 / 4 8 388 609 to 16 777 216 / 8 16 777 217 to 33 554 432 / 16 33 554 433 to 67 108 864 / 32 67 108 865 to 134 217 728 / 64 134 217 729 to 268 435 456 / 128
Bit Window	Excludes any channels among internal 32 channels from measurement. (Available only in NRZ mode.)
External Mask	H: Measurement L: Mask
Capture	NRZ, PAM4 (Only FEC Symbol Capture is available when LSB/MSB Diagnostics is set to ON.) PAM4 is available when the Option z41 SER Measurement is installed.
Capture Mode	Sync Mode Capture Performs error judgment. Synchronization is required between input data and pattern setting. Raw Data Capture Does not perform error judgment. Synchronization is not required between input data and pattern setting. FEC Symbol Capture*1, *2 Performs FEC Symbol error judgment. Synchronization is required between input data and pattern setting. Judgement is made on whether the number of FEC Symbol errors exceeds the threshold.
Auto Launch	Select the result screen you want to display automatically when data is captured. ● Capture Data Displays the captured pattern data numerically or by a string (Bin, Hex, Symbol). ● Error Mapping Displays the captured error data as a map. This cannot be selected when Capture Mode is Raw Data Capture or FEC Symbol Capture. ● Disable Does not automatically display the result screen.
Number of Blocks	1, 2, 4, 8, 16, 32, 64, 128
Block Length	NRZ: 8 Mbits / n (n=Number of blocks) PAM4: 4 Msymbols / n (n=Number of blocks)

*1: Each FEC Symbol consists of data of 10 or 20 bits.

*2: Occurrence of one or more bit errors in one FEC Symbol is counted as one FEC Symbol error.

<tr><td>Bit Length in a FEC Symbol</td><td>10. 20 bits</td></tr>
</table>

*3: Consecutive Error Detect: Starts capturing when the number of consecutive FEC Symbol Errors equals to or exceeds the threshold regardless of codeword.

*4: Intermittent Error Detect: Starts capturing when the number of FEC Symbol Errors that occurred within one codeword exceeds the threshold.

Table 1.3.3-10 Error Analysis (Cont'd)

Item	Specifications
Capture (Cont'd)	
FEC Symbol Errors in a Codeword	When Trigger is Consecutive Error Detect: 1 to 32 FEC Symbols, 1 FEC Symbol step When Trigger is Intermittent Error Detect: 1 to n, 1 FEC Symbol step (n = Number of FEC Symbols in a Codeword)
Comparison	Greater than or equal to, Equal to
Capture Result	
Capture Data	Displays captured results by bit or symbol sequence in NRZ or PAM4 mode. When Capture Mode is Sync Mode Capture or FEC Symbol Capture, error bits and symbols are displayed with background color.
Viewer Mode	Sets the view mode of the captured result pattern. NRZ: BIN, HEX PAM4: Symbol, BIN(MSB/LSB) Waveform display can be turned on and off.
Error display	NRZ: Insertion Error, Omission Error PAM4(Symbol): Lower Eye Error, Middle Eye Error, Upper Eye Error, Middle/Lower Eye Error, Upper/Middle Eye Error, Upper/Middle/Lower Eye Error PAM4(MSB/LSB): Insertion Error, Omission Error This is available only when Capture Mode is Sync Mode Capture or FEC Symbol Capture.
Error Search	First: Fist error Pre: Previous error Next: Next error Last: Last error In PAM4 mode only, a search target can be selected from All, Upper Eye, Middle Eye and Lower Eye. This is available only when Capture Mode is Sync Mode Capture or FEC Symbol Capture.
Continuous Error	Searches for continuous error bits / symbols. NRZ: 1 to 256 bits PAM4(Symbol): 1 to 256 symbols PAM4(MSB/LSB) : 1 to 256 bits This is available only when Capture Mode is Sync Mode Capture or FEC Symbol Capture.

Table 1.3.3-10 Error Analysis (Cont'd)

Item	Specifications
Capture (Cont'd)	
File Save	Saves the captured results and pattern to a file. NRZ: BIN/HEX Text: Captured result file (It can be opened in the Capture Data screen.) BIN/HEX Text(export): Pattern file including error information (It can be opened in Pattern Editor.) PAM4: Symbol Text: Captured result file (It can be opened in the Capture Data screen.) Symbol Text(export): Pattern file including error information (It can be opened in Pattern Editor.)
File Open	Redisplays the captured results. NRZ: BIN/HEX Text: Captured result file PAM4: Symbol Text: Captured result file
Error Mapping	Visually maps errors using bits with colored-background in NRZ or PAM4 mode. This is available only when Capture Mode is Sync Mode Capture.
Error display	NRZ: Insertion Error, Omission Error PAM4: Lower Eye Error, Middle Eye Error, Upper Eye Error, Middle/Lower Eye Error, Upper/Middle Eye Error, Upper/Middle/Lower Eye Error
File Open	Remaps the captured results (errors). NRZ: BIN/HEX Text: Captured result file PAM4: Symbol Text: Captured result file

Table 1.3.3-11 Auto Measurement

Item	Specifications
Bath-Tub	NRZ/PAM4: Available*1
Eye Contour	NRZ/PAM4: Available*2, *3
Auto Adjust	NRZ: Vth direction only*4 PAM4: MSB Vth direction only*4, *5
Auto Search	NRZ: Available*4 PAM4 (LSB/MSB Diagnostics OFF/ON): Available*4, *6
Advanced Search	Supports adjustment of PRBS Inv, Logic, Gray Coder, Eye Threshold (Middle, Upper, Lower), Delay, DFE and LFEQ.*7, *8
BER/SER Logging	NRZ: With BER Logging PAM4: With SER Logging

*1: When PAM4 is selected, measurement can be performed by selecting one from Upper, Middle, and Lower Eyes, and SER.

*2: When PAM4 is selected, measurement can be performed by selecting one from Upper, Middle, and Lower Eyes.

*3: The PAM4 waveform is displayed by optimizing the delay in the phase direction inside the measuring instrument of each of Upper/Middle/Lower eyes.

*4: PRBS Pattern, Mark Ratio 1/2

*5: Each of amplitudes shall be equal.

*6: Each of 0/1, 1/2 and 2/3 levels is equal.

*7: The Option z11 is required for adjustment of DEF and LFEQ.

*8: PRBS Inv, Logic, Gray Coder, and Eye Threshold (Upper, Lower) are available only when Modulation Type is PAM4.

Table 1.3.3-12 Variable Clock Delay

Item	Specifications
Phase variable range	–1000 to +1000 mUI, 2 mUI step
Accuracy	±50 mUIp-p*1, *2 (Baud rate ≤32.1 Gbaud) ±100 mUIp-p*1, *2 (Baud rate >32.1 Gbaud)
mUI – ps switching	Available (internally converted into ps)
Calibration	Available (when jitter modulation is off)
Calibration indicator	This indicator is on when Calibration is required due to: • Change in 1/1Clock frequency by ±250 kHz. • Change in the ambient temperature by ±5°C.

*1: Measure using an oscilloscope with residual jitter of less than 200 fs (RMS).

*2: Typical value

Table 1.3.3-13 Jitter Tolerance

Item	Specifications
For NRZ input	Bit rate: 32.1 Gbit/s, 64.2 Gbit/s*1 Pattern: PRBS2^{31}–1 32.1 Gbits: With MU181500B, SSC with frequency of 33 kHz and deviation of 5300 ppm can be applied simultaneously with RJ with amplitude of 0.3 UI. 64.2 Gbits: With MU181500B, SSC with frequency of 33 kHz and deviation of 3300 ppm can be applied simultaneously with RJ with amplitude of 0.3 UI. These specifications are defined assuming the following conditions: Loopback connection to the MU196020A, at a constant temperature between 20 and 30°C. When RJ+BUJ is bigger than 0.5 UIp-p or SJ + RJ + BUJ is bigger than the standard value + 0.3 UIp-p, "Overload" is displayed on the MU181500B screen. 32.1 Gbit/s  **Modulation frequency [Hz] / Max. modulation amplitude [UIp-p] / Specification [UIp-p]** 10 — 2 000 — 2 000 7 500 — 2 000 — 2 000 100 000 — 2 000 — 150 1 000 000 — 200 — 15 10 000 000 — 16 — 1 150 000 000 — 1 — 1

Item	Specifications
Dimensions	21 mm (H), 234 mm (W), 175 mm (D), Excluding protrusions
Mass	2.5 kg max.
Operating temperature	15 to 30°C MP1900A's ambient temperature. MU196040B shall operate when installed.
Storage temperature	–20 to 60°C MU196040B installed to MP1900A shall comply with MIL-T-28800E Class 5.

Chapter 2 Before Use

This chapter describes preparations required before using the MP1900A modules.

2.1 Installation to MP1900A

For information on how to install the MP1900A modules to the MP1900A and how to turn on the power, refer to Chapter 3 “Preparation before Use” in the *MP1900A Signal Quality Analyzer-R Operation Manual*.

2.2 How to Operate Application

The modules connected to the MP1900A are controlled by operating the MX190000A Signal Quality Analyzer-R Control Software (hereinafter, referred to as “MX190000A”).

For information on how to start up, shut down, and operate the MX190000A, refer to the *MX190000A Signal Quality Analyzer-R Control Software Operation Manual.*

2.3 Preventing Damage

Always observe the ratings when connecting to the input and output connectors of the MP1900A modules. If an out-of-range signal is input, the MP1900A modules may be damaged.

⚠ CAUTION

- **When signals are input to the MP1900A modules, avoid excessive voltage beyond the rating. Otherwise, the circuit may be damaged.**
- **When output is used at the 50 Ω GND terminator, never feed any current or input signals to the output.**
- **As a countermeasure against static electricity, ground other devices to be connected (including experimental circuits) with ground wires before connecting the I/O connector.**
- **The outer conductor and core of the coaxial cable may become charged as a capacitor. Use any metal to discharge the outer conductor and core before use.**
- **Never open the MP1900A modules. If you open it and MP1900A modules have failed or sufficient performance cannot be obtained, we may decline to repair the MP1900A modules.**
- **The MP1900A modules have many important circuits and parts including hybrid ICs. These parts are extremely sensitive to static electric charges, so never open the case of the MP1900A modules.**
- **The hybrid ICs used in the MP1900A modules are sealed in airtight containers; never open them. If you open it and the MP1900A modules have failed or sufficient performance cannot be obtained, we may decline to repair the MP1900A.**

⚠ CAUTION

- **To protect the MP1900A modules from electrostatic discharge failure, a conductive sheet should be placed onto the workbench, and the operator should wear an electrostatic discharge wrist strap. Always ground the wrist strap to the workbench antistatic mat or the frame ground of the MP1900A modules.**

- **When connecting an external device such as a Bias-T to the output connectors of MP1900A modules, if the output signal includes any DC voltage, variations in the output of the DC power supply or load may change the level of the output signal, risking damage to the internal circuits.**

  - **Do not connect or disconnect any external devices while DC voltage is impressed.**

  - **Only switch DC power sources ON and OFF when all equipment connections have been completed.**

  <Recommended procedure>

  Measurement Preparation 1:

  1. **Connect all equipment.**
  2. **Set the DC power supply output to ON.**
  3. **Set the MP1900A modules output to ON and complete measurement.**

  Measurement Preparation 2

  1. **Set the equipment output to OFF.**
  2. **Set the DC power supply output to OFF.**
  3. **Disconnect the MP1900A modules, or change the DUT connections.**

  Since even unforeseen fluctuations in DC voltage and load (open or short circuits at the MP1900A modules output side and changes caused by using a high-frequency probe, etc.,) can damage the DUT and equipment, we recommend connecting a 50–ohm resistance in series with the DC terminal of the Bias-T to prevent risk of damage.

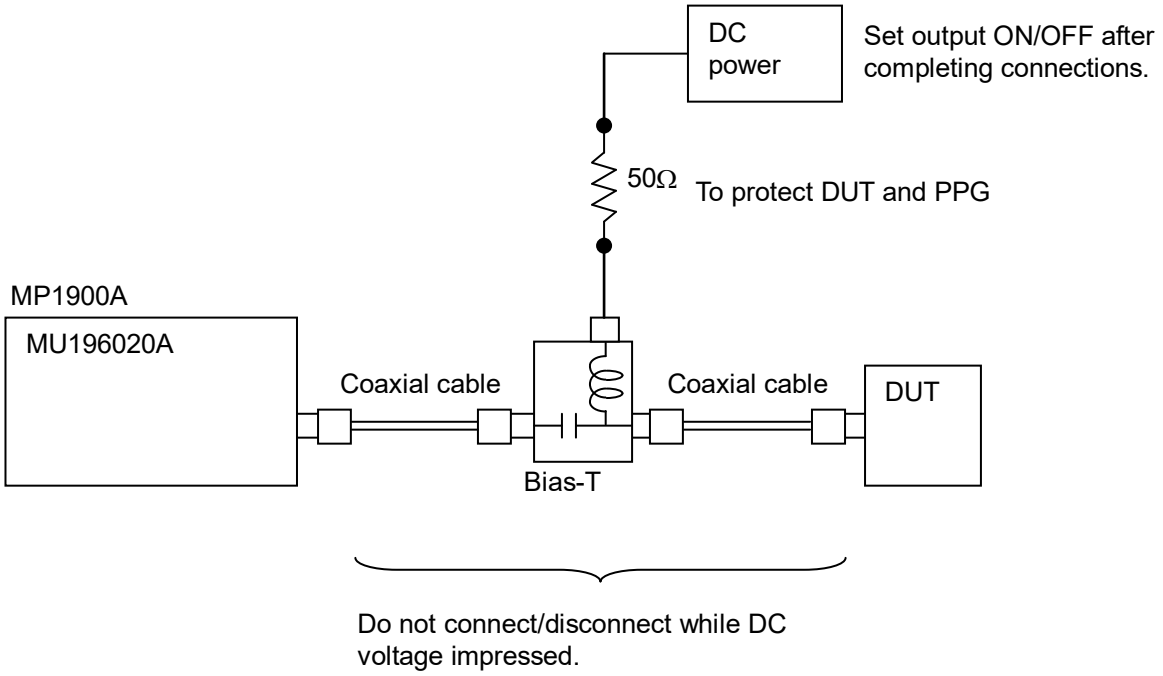

Figure 2.3-1 Bias-T Connection Example

Chapter 3 Panel Layout and Connectors

This chapter describes the panel and connectors of the MP1900A modules.

3.1 Panel Layout

3.1.1 MU196020A

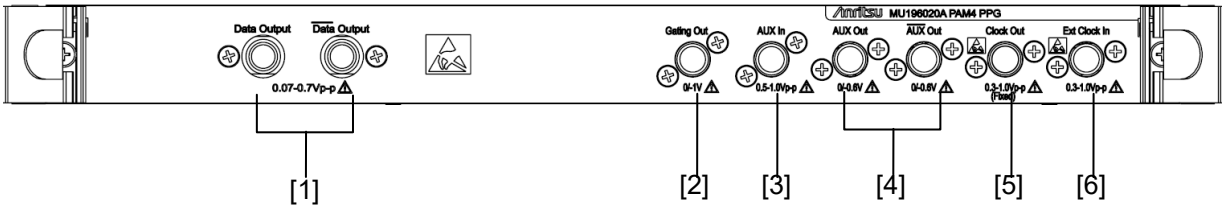

Figure 3.1.1-1 Panel layout (MU196020A-x10)

Table 3.1.1-1 Connectors on panel

No.	Name	Description
[1]	Data Output, $\overline{\text{Data}}$ Output	Outputs differential Data and $\overline{\text{Data}}$ signals. Various interface signals can be output, depending on the installed option (s). Because of differential output, be sure to terminate the unused connector with the coaxial terminator (V210).
[2]	Gating Out	In case of Repeat: Outputs the timing signals. In case of Burst: Outputs the timing signals for Burst.
[3]	AUX In	Inputs auxiliary signals. Variation: Error Injection, Burst
[4]	$\overline{\text{AUX}}$ Out, $\overline{\text{AUX}}$ Out	Outputs auxiliary signals. Variation: 1/N Clock, Pattern Sync, Burst Output2 Because of differential output, be sure to terminate the unused connector with the coaxial terminator (J1632A).
[5]	Clock Out	Outputs clock signals.
[6]	Ext Clock In	Inputs clock signals from these units: MU181000A 12.5GHz Synthesizer MU181000B 12.5GHz 4 Port Synthesizer MU181500B Jitter Modulation Source External Synthesizer*

*: We recommend using the MG3690C series as an external synthesizer.

For details about the MG3690C series, contact Anritsu or our sales representative.

3.1.2 MU196040A

Figure 3.1.2-1 Panel layout (MU196040A)

Table 3.1.2-1 Connectors on panel

No.	Name	Description
[1]	Data Input, $\overline{\text{Data}}$ Input	Input Data, $\overline{\text{Data}}$ data signals. Support both differential and single-ended input signals.
[2]	AUX In	Inputs auxiliary signals. Variation: External Mask, Burst
[3]	AUX Out, $\overline{\text{AUX}}$ Out	Outputs auxiliary signals. Variation: 1/N Clock, Pattern Sync, Sync Gain, Error Output Because of differential output, be sure to connect the coaxial terminator (J1632A) to unused side connector.
[4]	Ext Clock In	Inputs clock signals. Mainly connected to the Clock Out connector of the PAM4 PPG.

3.1.3 MU196040B

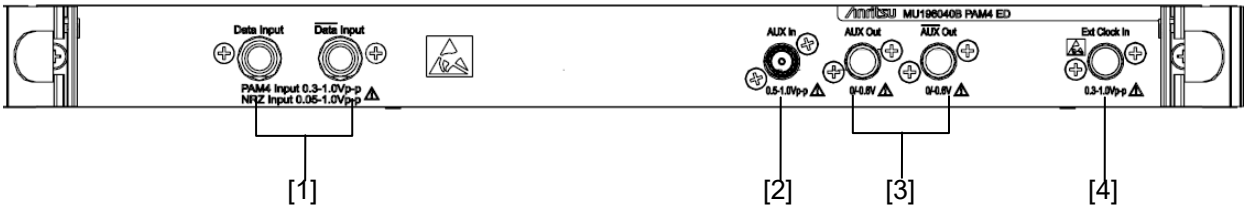

Figure 3.1.3-1 Panel layout (MU196040B)

Table 3.1.3-1 Connectors on panel

No.	Name	Description
[1]	Data Input, $\overline{\text{Data}}$ Input	Input Data, $\overline{\text{Data}}$ data signals. Support both differential and single-ended input signals. Be sure to terminate the unused connector with the coaxial terminator (V210).
[2]	AUX In	Inputs auxiliary signals. Variation: External Mask, Burst, Capture External Trigger
[3]	AUX Out, $\overline{\text{AUX}}$ Out	Outputs auxiliary signals. Variation: 1/N Clock, Pattern Sync, Sync Gain, Error Output Because of differential output, be sure to connect the coaxial terminator (J1632A) to unused side connector.
[4]	Ext Clock In	Inputs clock signals. Mainly connected to the Clock Out connector of the PAM4 PPG.

3.2 Inter-Module Connection

Avoid static electricity when handling the devices.

⚠ WARNING

- **When signals are input to this MP1900A modules, avoid excessive voltage beyond the rating. Otherwise, the circuit may be damaged.**
- **As a countermeasure against static electricity, ground other devices to be connected (including experimental circuits) with ground wires before connecting the I/O connector.**
- **The outer conductor and core of the coaxial cable may become charged as a capacitor. Use any metal to discharge the outer conductor and core before use.**
- **The power supply voltage rating for the MP1900A is shown on the rear panel. Be sure to operate the MP1900A within the rated voltage range. The MP1900A may be damaged if a voltage out of the rating range is applied.**
- **To protect the MP1900A modules from electrostatic discharge failure, a conductive sheet should be placed onto the workbench, and the operator should wear an electrostatic discharge wrist strap. Always ground the wrist strap to the workbench antistatic mat or the frame ground of the MP1900A.**
- **When removing a cable from a connector on the front panel of the MP1900A modules, be careful not to add excessive stress to the connector.**
  Addition of excessive stress to a connector may result in characteristic degradation or a failure. Use a torque wrench (recommended torque: 0.9 N-M) when attaching or removing a cable.

⚠ CAUTION

The maximum data input level of MU196040A/B is 1.00 Vp-p.

When connecting the Data Output connector of MU195020A/MU183020A directly to the Data Input connector of MU196040A/B to verify operation, make sure that the data output level of MU195020A/MU183020A is 1.00 Vp-p or under.

Avoid inputting the signal exceeding the maximum input level to the Data Input connector of MU196040A/B. Failure to do so can cause damage.

3.2.1 Measuring Errors

This section describes a connection example of MU196020A, MU181000B 12.5GHz 4 ports synthesizer (hereafter MU181000B), and MU196040A/B that are installed to an MP1900A.

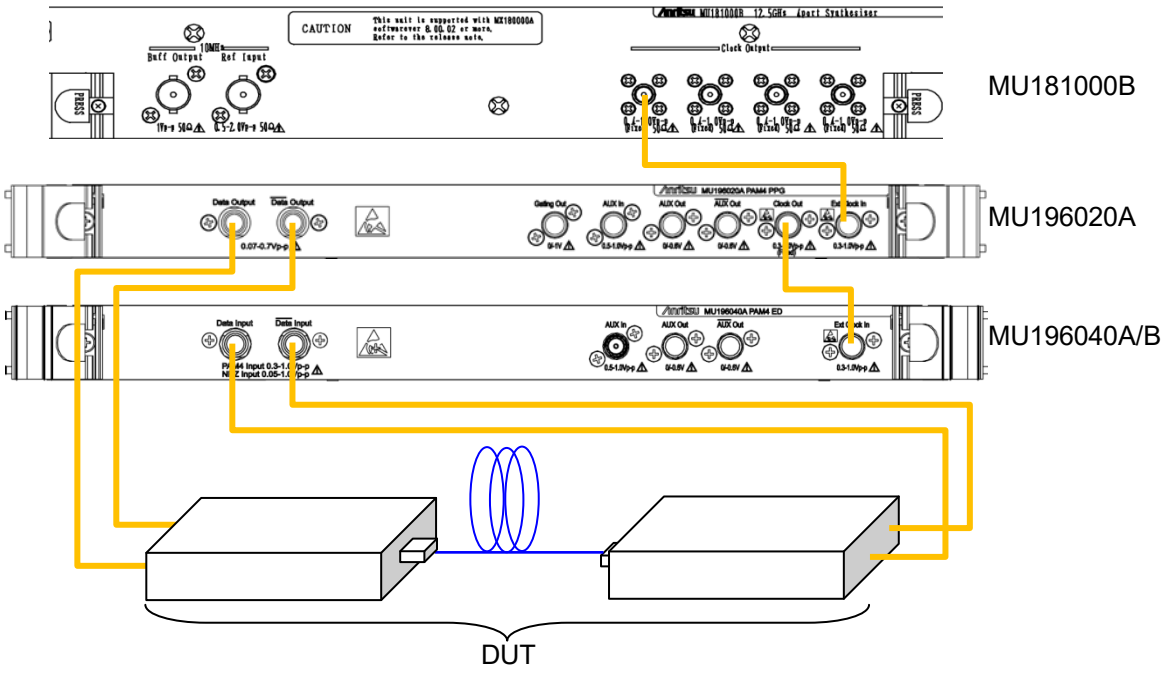

Figure 3.2.1-1 Inter-module connection example

1. Using a coaxial cable, connect the Clock Output connector of the MU181000B and the Ext Clock Input connector of the MU196020A.
2. Using a coaxial cable, connect the Clock Output connector of the MU196020A and the Ext Clock Input connector of the MU196040A/B.
3. Using a coaxial cable, connect the Data Output connector of the MU196020A and the Data Input connector of the device under test (DUT). Also, using a coaxial cable, connect the $\overline{\text{Data}}$ Output connector of the MU196020A and the $\overline{\text{Data}}$ Input connector of the DUT.
4. Using a coaxial cable, connect the Data Output connector of the DUT and the Data Input connector of the MU196040A/B. Also, using a coaxial cable, connect the $\overline{\text{Data}}$ Output connector of the DUT and the $\overline{\text{Data}}$ Input connector of the MU196040A/B.
5. Launch MX190000A, and touch **Standard BERT for PAM4** in the Application Selector screen.

   Configure the module settings including bit rate, pattern and amplitude.

3.2.2 Measuring Errors with Noise Added

This section describes a connection example of MU196020A, MU181000B, MU181500B Jitter Modulation Source (hereafter MU181500B), MU195050A, and MU196040A/B that are installed to an MP1900A. To connect MU196020A and the Data1 connector of MU195050A, use J1792A (optional accessory).

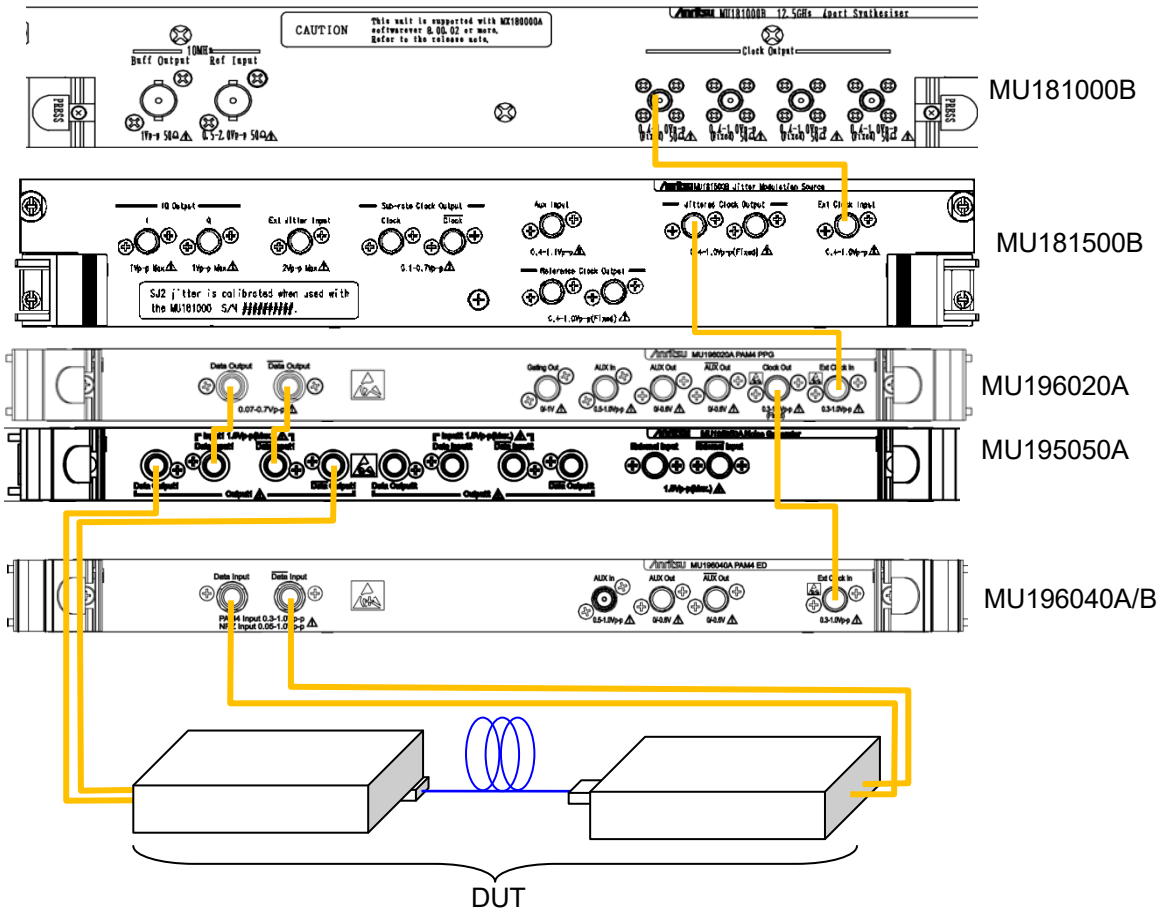

Figure 3.2.2-1 Inter-module connection example

1. Using a coaxial cable, connect the Clock Output connector of the MU181000B and the Ext Clock Input connector of the MU196020A.
2. Using the J1792A skew match pair semirigid cables (V-K connector, Data Input1), connect the Data Output and $\overline{\text{Data}}$ Output connectors of the MU196020A to the Data Input and $\overline{\text{Data}}$ Input connectors of the MU195050A.
3. Using a coaxial cable, connect the Data Output connector of the MU195050A and the Data Input connector of the device under test (DUT). Also, using a coaxial cable, connect the $\overline{\text{Data}}$ Output

connector of the MU195050A and the $\overline{\text{Data}}$ Input connector of the DUT.

4. Using a coaxial cable, connect the Data Output connector of the DUT and the Data Input connector of the MU196040A/B. Also, using a coaxial cable, connect the $\overline{\text{Data}}$ Output connector of the DUT and the $\overline{\text{Data}}$ Input connector of the MU196040A/B.
5. Launch MX190000A, and touch **Standard BERT for PAM4** in the Application Selector screen.

   Configure the module settings including bit rate, pattern and amplitude.
6. On the **Output** tab of the MU196020A, set **Ext ATT Factor** to 3.3 dB (typ.) as the loss of the MU195050A.

3.2.3 Adding Jitter to Output Signal

To add jitter to signals output from PAM4 PPG, use MU181000B and MU181500B.

Figure 3.2.3-1 shows a connection example of MU181000B, MU181500B, MU196020A, and MU196040A/B. MU196040A/B-001 supports up to 32.1 Gbit/s and 32.1 Gbaud.

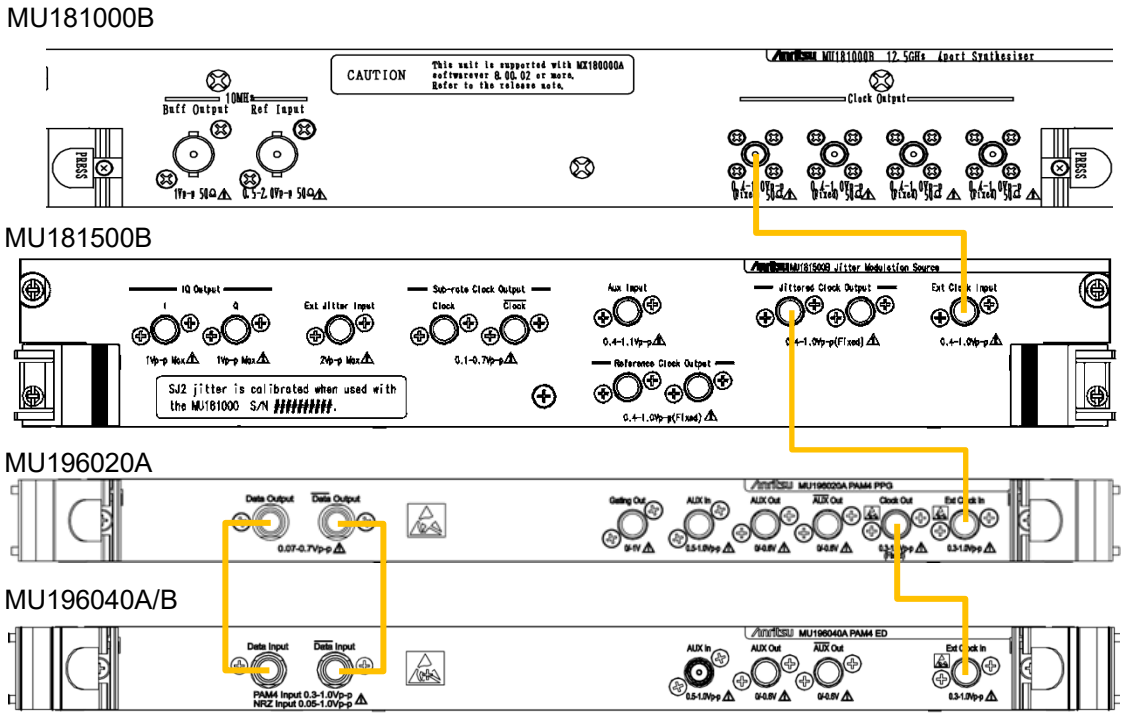

Figure 3.2.3-1 Connection example when adding jitter to output signal

1. Using a coaxial cable, connect the Clock Output connector of the MU181000B and the Ext Clock Input connector of the MU181500B.
2. Using a coaxial cable, connect the Jittered Clock Output connector of the MU181500B and the Ext Clock Input connector of the MU196020A.
3. Using a coaxial cable, connect the Clock Output connector of the MU196020A and the Ext Clock Input connector of the MU196040A/B.
4. Using coaxial cables, connect Data Output and $\overline{\text{Data}}$ Output connectors of the MU196020A with Data Input and $\overline{\text{Data}}$ Input connectors of the MU196040A/B (2 connections).
5. Launch MX190000A, and touch **Standard BERT for PAM4** in the Application Selector screen.

   Configure the module settings including bit rate, pattern and amplitude.

3.2.4 Synchronizing Multiple Channels of PPG

To synchronize multiple MU196020As installed to MP1900A, use MU181000A/B or external clock.
The following figure shows a connection example when synchronizing two units of MU196020A using MU181000B.

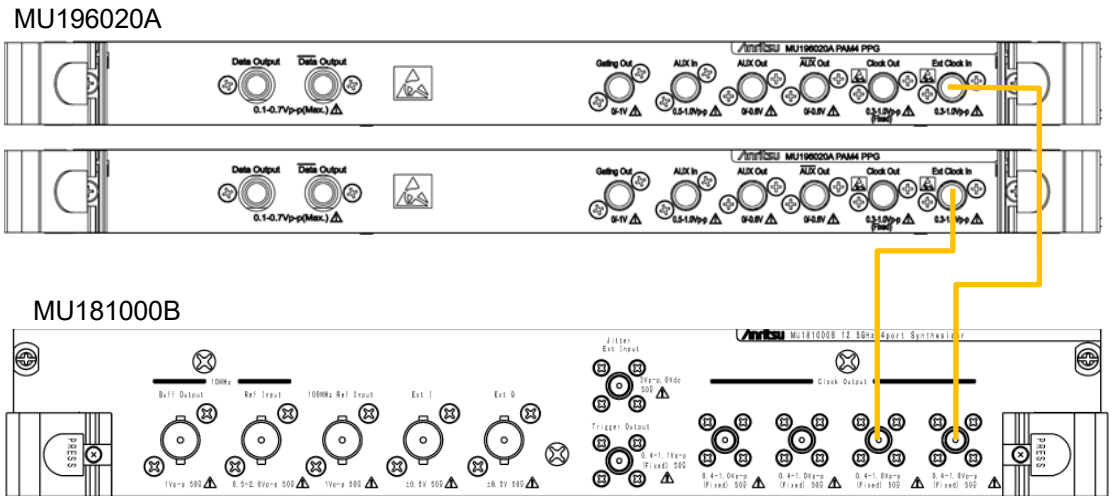

Figure 3.2.4-1 Connection Example When Synchronizing Two Units of PPGs

1. Connect two Clock Output connectors on MU181000B to the Ext Clock In connector on each MU196020A with two coaxial cables.
2. Start MX190000A and select **Menu** → **Combination Setting** on the menu bar. Set Sync ON/OFF of Inter module Combination to **Channel Synchronization**.

Notes:

- Insert units of MU196020A into slots in order from Slot 1.
- Make sure that the cable phase difference is 10 ps or under.

The following figure shows a connection example when synchronizing four units of MU196020A using MU181000B and MU181500B.

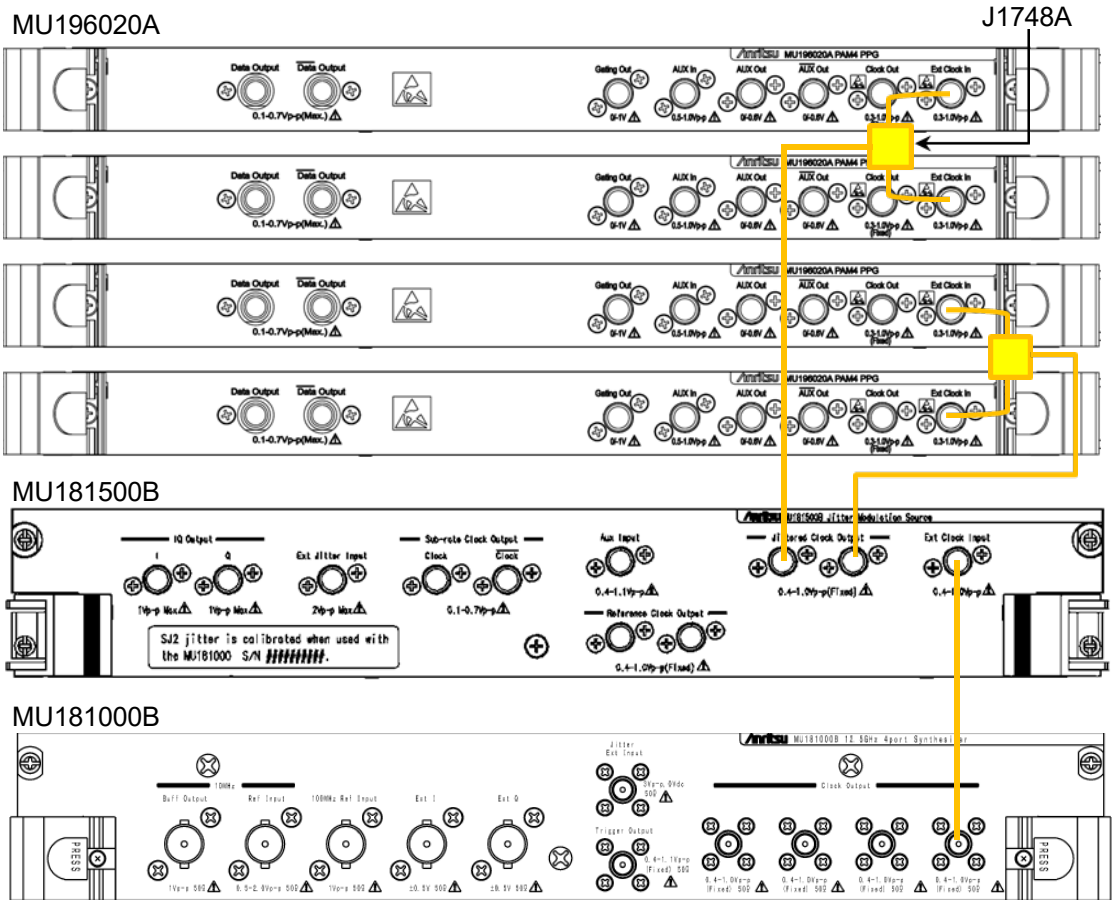

Figure 3.2.4-2 Connection Example When Synchronizing Four Units of PPGs

1. Connect the Clock Output connector of MU181000B and the Ext Clock Input connector of MU181500B with a coaxial cable.
2. Connect one Jittered Clock Output connecter on MU181500B to the J1748A Power Splitter (1.5G-18GHz), which is an optional accessory, and the other Jittered Clock Output connector on MU181500B to other J1748A, using two coaxial cables.
3. Connect two J1748As to the Ext Clock In connector on four MU196020As using four coaxial cables.
4. Start MX190000A and select **Menu** → **Combination Setting** on the menu bar. Set Sync ON/OFF of Inter module Combination to **Channel Synchronization**.

Notes:

- Insert units of MU196020A into slots in order from Slot 1.
- Make sure that the cable phase difference is 10 ps or under.

Chapter 4 Usage Examples

This chapter describes usage examples of measurement using the MP1900A modules.

4.1 Evaluating Optical Components in 400GbE Transceiver

This section explains how to evaluate optical components used in a 400GbE optical transceiver by using MU196020A and MU196040A.
The optical components are as follows:

- TOSA (transmitter optical subassembly) consisting of a laser diode, driver amp, EML and other parts
- ROSA (receiver optical subassembly) consisting of a photodiode, TIA (transimpedance amplifier) and other parts

The following is the block diagram of this test that uses MP1900A, MU181000B, MU196020A and MU196040A.
If a DUT has four optical channels (lanes) as shown below, the lanes are evaluated one by one.
If four MU196020As or MU196040As are used, the four lanes can be evaluated at a time. Up to four MU196020As or MU196040As can be installed on an MP1900A. For details on the connections, refer to 3.2.4 “Synchronizing Multiple Channels of PPG”.

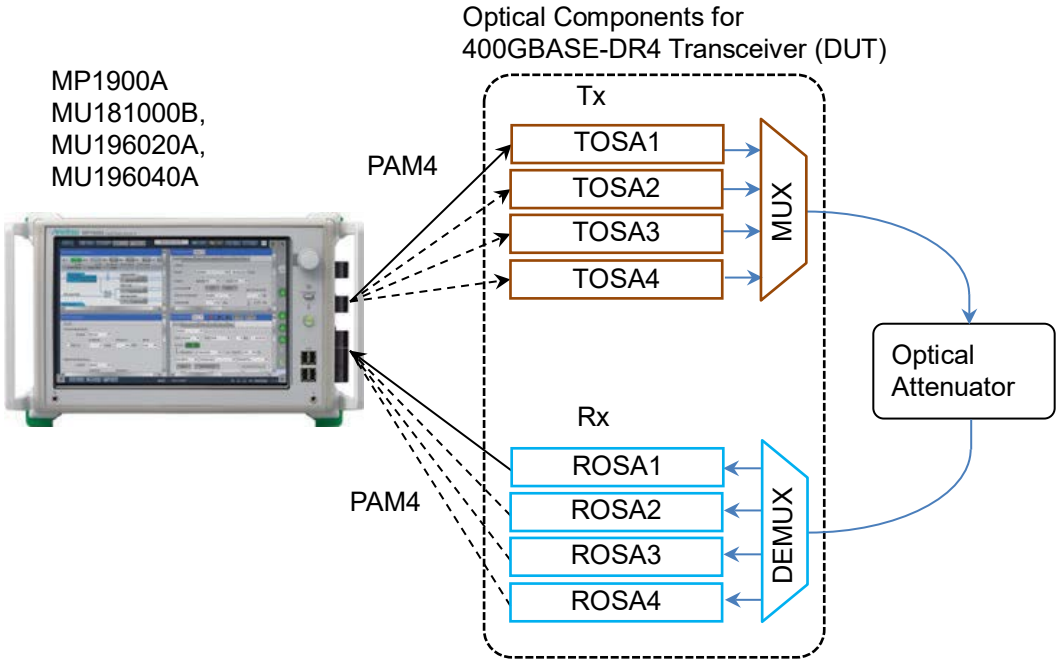

Figure 4.1-1 Block Diagram for Optical Component Evaluation

Measurement

1. Connect the MP1900A and DUT to GND.
2. Use a coaxial connector to connect the Clock Output connector of the MU181000B and the Ext. Clock In connector of the MU196020A.
3. Use a coaxial connector to connect the Clock Out connector of the MU196020A and the Ext. Clock In connector of the MU196040A.
4. Use coaxial cables to connect the Data Output connector and $\overline{\text{Data}}$ Output connector of the MU196020A to the Data Input connectors of the DUT (TOSA) (two connections).

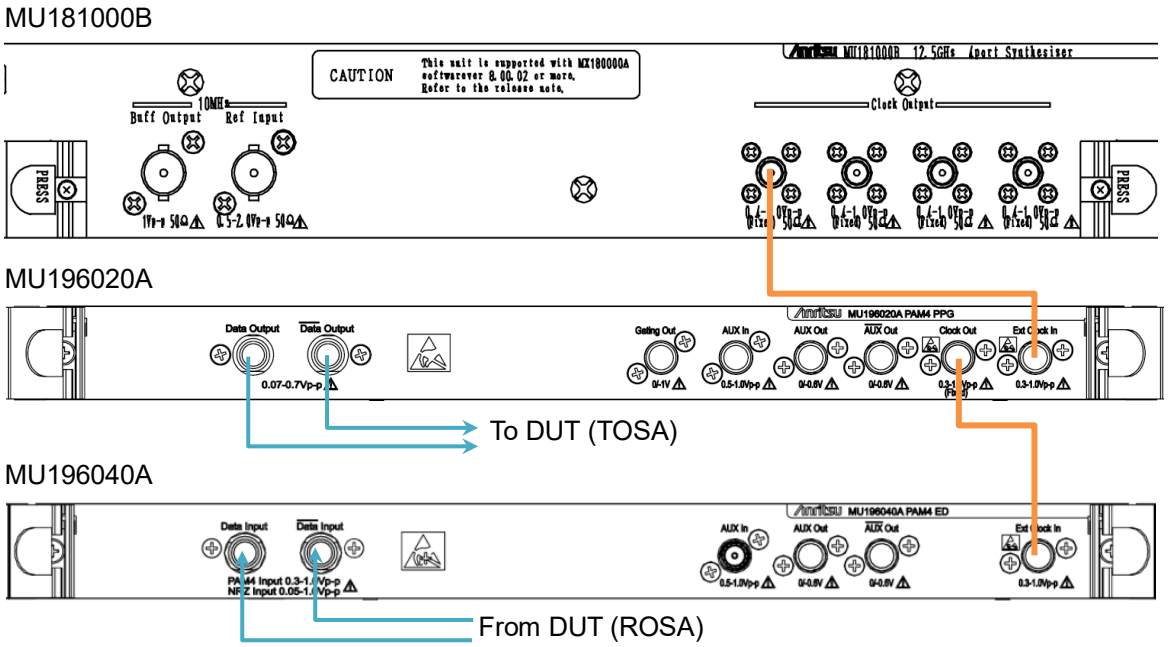

Figure 4.1-2 Module Connection Diagram

5. Use coaxial cables to connect the Data Input connector and $\overline{\text{Data}}$ Input connector of the MU196040A to the Data Output connectors of the DUT (ROSA) (two connections).
6. Connect the DUT and the optical attenuator. Minimize the attenuation.

Test method

1. Connect the power cord of the MP1900A.
2. Turn on the MP1900A.
3. Turn **OFF** data output. Match MU196020A data output interface to DUT's input by adjusting the amplitude and offset on the **Output** tab.
4. On the **Pattern** tab of the MU196020A and MP196040A, set the pattern by selecting a test pattern.
5. On the **Output** tab of the MU196020A, set the operation bit rate.
6. Adjust the data input interface of the MU196040A to the output interface of the DUT.
   On the **Input** tab of the MU196040A, select a terminal condition at the Input Condition. Since the DUT is connected by the differential interface, select **Differential 100 Ohm**, and then **Tracking**.
7. Turn on the DUT.
   Be sure to turn on the MP1900A first, and then the DUT.

⚠ CAUTION

The DUT may be damaged if a signal line is connected or disconnected while the output is ON. Be sure to turn off the MP1900A before changing the cable connection.

8. On the **Output** tab of the MU196020A, set Data/XData to **ON**, and then touch the Output button at the top of the screen to turn it from grey to green (
).
9. Adjust the threshold voltage of the MU196040A.
   Touch the **Auto Search** module function button. Select the module and mode, and start. If the input level is low, manually adjust it.
10. On the **Result** tab of the MU196040A, start the measurement and check the BER measurement result.
11. Check that the DUT is operating normally, and then adjust the attenuation of the optical attenuator to measure the sensitivity of the DUT (ROSA).
12. Change the connection of TOSA and ROSA, and then repeat steps 3 to 11.

4.2 Evaluating Devices for 400GbE Transceiver

In the evaluation of SERDES for 400GbE transceiver, the jitter tolerance of the CDR (Clock Data Recovery) is measured. This test requires the emphasis settings to be configured in order to compensate the frequency characteristics of the transmission channel and devices.
This section provides a test example with the configuration where MU196020A is installed to MP1900A.

If four MU196020As or MU196040As are used, the four lanes can be evaluated at a time. Up to four MU196020As or MU196040As can be installed on an MP1900A. For details on the connections, refer to 3.2.4 "Synchronizing Multiple Channels of PPG".

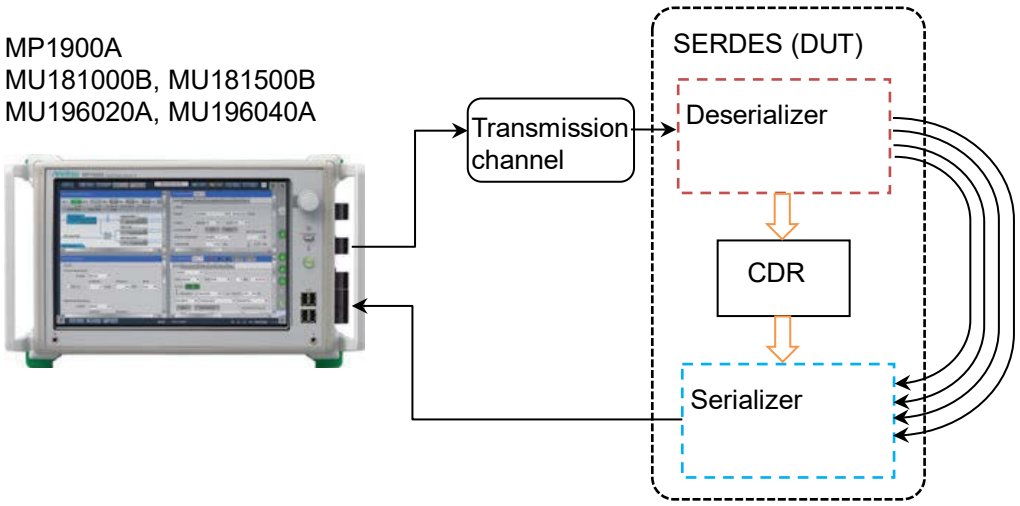

Figure 4.2-1 Block Diagram of SERDES Evaluation

Measurement

1. Connect the MP1900A and DUT to GND.
2. Use a coaxial connector to connect the Clock Output connector of the MU181000B and the Ext. Clock Input connector of the MU181500B.
3. Use a coaxial connector to connect the Jittered Clock Output connector of the MU181500B and the Ext. Clock In connector of the MU196020A.
4. Use coaxial cables to connect the Clock Out connector of the MU196020A to the Ext. Clock In connectors of the MU196040A.
5. Use coaxial cables to connect the Data Output connector and $\overline{\text{Data}}$ Output connector of the MU196020A to the Data Input connectors of the DUT (two connections).

6. Use coaxial cables to connect the Data Input connector and $\overline{\text{Data}}$ Input connector of the MU196040A to the Data Output connectors of the DUT (two connections).
7. To input the reference clock to the DUT, connect the Sub-rate Clock Output connector of MU181500B and the Clock Input connector of the DUT with a coaxial cable.

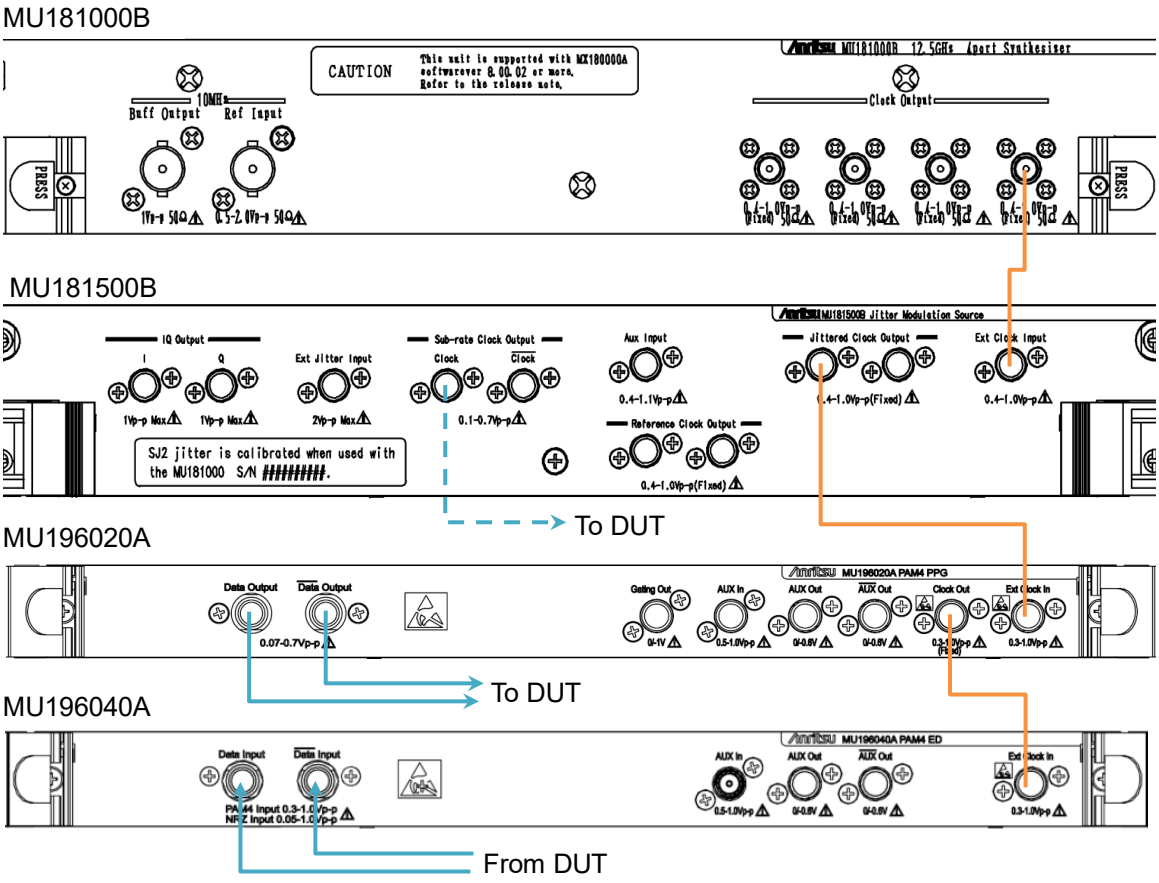

Figure 4.2-2 Module Connection Diagram

Test method

1. Connect the power cord of the MP1900A.
2. Turn on the MP1900A.
3. Set the frequency and amplitude of the jitter to be added by MU181500B.
   To input the reference clock to the DUT, set the amplitude and division ratio of the Sub-rate Clock Output.
4. Turn **OFF** data output. Match MU196020A data output interface to DUT's input by adjusting the amplitude and offset on the **Output** tab.
5. On the **Output** tab of the MU196020A, set the operation bit rate to **28 Gbit/s.**
6. On the **Pattern** tab of the MU196020A, select a test pattern.

7. On the **Output** tab of the MU196020A, set Data Output to **ON**, and then touch the Output button on the top of the screen to turn it from grey to green (

).
8. Adjust the threshold voltage of the MU196040A.
   Touch the **Auto Search** module function button. Select the module and mode, and start. If the input level is low, manually adjust it.
9. On the **Result** tab of the MU196040A, start the measurement, and check the BER measurement result.
10. On the **Emphasis** tab of the MU196020A, configure the emphasis settings.
11. While checking the BER measurement results of the MU196040A, edit the emphasis settings for the MU196020A so that the BER can be optimal.
12. While checking the BER measurement results of the MU196040A, adjust the frequency and amplitude of the jitter to be added by MU181500B so that the BER can be optimal.

Chapter 5 Performance Test

This chapter describes the performance testing of the MP1900A modules.

5.1 Timing of Performance Tests

Performance test is conducted to check that the major performance of the MP1900A modules meets the required specifications.
Conduct performance tests at acceptance inspection, operation check after repair, and periodic testing (once every six months).

5.2 Devices Required for Performance Tests

Before starting performance test, warm up the MP1900A and the measuring instruments for at least 30 minutes. Table 5.2-1 shows the required devices for performance test.

Table 5.2-1 Devices Required for Performance Tests

Device Name	Model	Required Performance
Error detector	MP1900A + MU196040A-001 or MP1900A + MU196040B	Operating frequency: 2.4 to 32.1 GHz NRZ Data input sensitivity: 50 mVp-p or less*1 PAM4 Data input sensitivity: 300 mVp-p or less*2
Sampling oscilloscope		Electrical channel: 70 GHz or more band
Signal generator	MP1900A + MU196020A + MU181000A/B or MG3690 series	When using Ext Clock: Operating frequency: 1.2 to 16.05 GHz Output level: 300 to 1000 mVp-p Waveform: Rectangular wave or sine wave
Electrical Length Specified Coaxial Cable (0.4m, V connector)	J1789A	Bandwidth: 65 GHz, For connecting data signals
Electrical Length Specified Coaxial Cable (0.8m, V connector)	J1790A	Bandwidth: 65 GHz, For connecting data signals
Coaxial Cable 0.3 m (SMA connector)	J1624A	Bandwidth: 18 GHz, For connecting clock signals
Coaxial cable 1 m	J1625A	Bandwidth: 18GHz, For connecting trigger signals
Coaxial Attenuator	J0541E	Attenuation: 6 dB
Precision Fixed Attenuator 20 dB	41V-20	Attenuation: 20 dB
Precision Adaptor	34VFK50	For the Data Input connector of MU196040A-001
Power Meter	ML2437A or ML2438A	
Power Sensor + cable	MA2444D	

*1: PRBS31, 26.5625 Gbit/s, 32.1 Gbit/s, when MU196040A-001 is installed.

*2: PAM4 0/1 1/2 2/3 Level, PRBS31, Eye height where BER is 1E–06, when using External Clock, 26.5625 Gbaud, when MU196040A-001 is installed.

Note:

Before starting the performance test, warm up the device under test and the measuring instruments for at least 30 minutes, and wait until they become sufficiently stabilized unless otherwise specified.

Maximum measurement accuracy is assured under the following

conditions:

- Measurement is performed at room temperature.
- Fluctuations of AC power supply voltage are small.
- Noise, vibration, dust, and humidity are insignificant.

5.3 Performance Test Items

This section describes the following test items.

- Operating Frequency Range
- Waveform Evaluation Test
- Input Level
- Pattern
- Error Detection

5.3.1 Operating Frequency Range

(1) Specifications

Table 5.3.1-1 Specifications

Option	Specifications
MU196020A-001	2.4 to 32.1 Gbit/s (Gbaud)
MU196020A-002, y12	2.4 to 58.2 Gbit/s (Gbaud)
MU196020A-003, y23	2.4 to 64.2 Gbit/s (Gbaud)
MU196040A or MU196040B-001	2.4 to 32.1 Gbit/s (Gbaud)
MU196040B-002, y12	2.4 to 58.2 Gbaud 2.4 to 64.2 Gbit/s

(2) Device connection

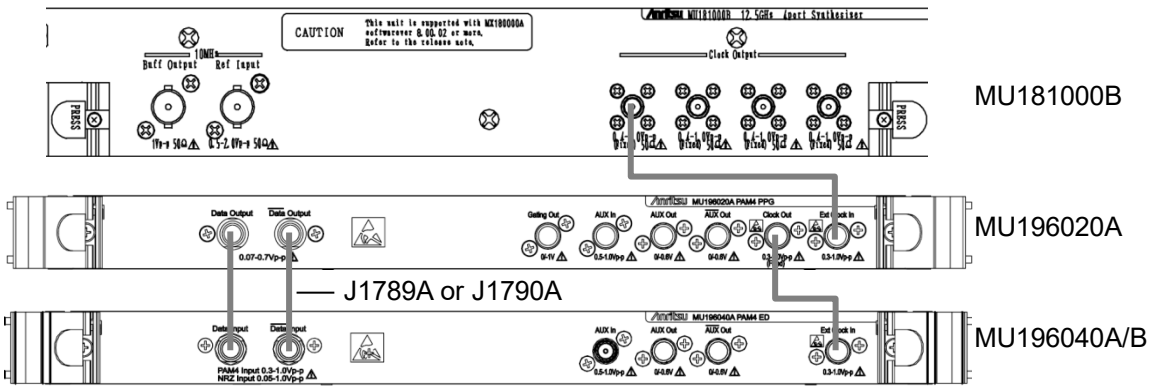

Figure 5.3.1-1 Connection Diagram for Operating Frequency Range Test

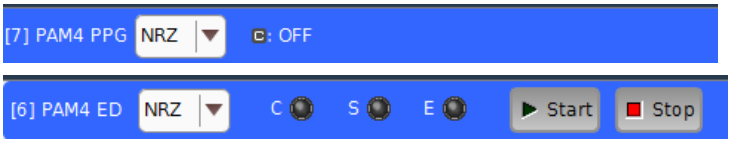
When using the MU181000A instead of MU181000B, attach the 6 dB Coaxial Attenuator to the Clock Output connector.

(3) Procedure

1. Mount the MU196020A onto the MP1900A, and turn on the MP1900A with the cables unconnected.
2. Set the modulation mode of MU196020A and MU196040A/B to **NRZ**.



3. On the **Output** tab of the MU196020A, set **Amplitude** to 0.500 Vp-p, and **Offset** to 0.000 V and Vth.
4. On the **Pattern** tab of the MU196020A, set **Test Pattern** to **PRBS** and **Length** to **2^31–1**.
5. Turn off the MP1900A when setting the parameters completely.
6. Connect the measuring instrument cables as shown in Figure 5.3.1-1.
7. Turn on the MP1900A and the measuring instruments, and warm them up.
8. Enable the MP1900A signal output (ON) to output signals from the MU196020A. The signals can be tested in the range of 2.4 to 32.1 Gbit/s (Gbaud).
9. Adjust the phase and threshold voltage of the MU196040A/B to the optimum values.
10. Check that no error is detected by the MU196040A/B.
11. While varying the operating frequency in the following range different by model and option, check that no error has occurred in the range.

    MU196040A and MU196040B-001: 2.4 to 32.1 Gbit/s (Gbaud)

    MU196040B-002: 2.4 to 64.2 Gbit/s (Gbaud)

    MU196040A and MU196040B-001 do not support the test of the operating frequency exceeding 32.1 Gbit/s (Gbaud).

    To check the MU196020A's performance at more than 32.1 Gbit/s when using the MU196040A and MU196040B-001, refer to 5.3.2, "Waveform Evaluation Test".

5.3.2 Waveform Evaluation Test

(1) Specifications

Table 5.3.2-1 Specifications for MU196020A

Item	Conditions	Specification
Amplitude	0.07 to 0.70 Vp-p*1, *2, *3, *4 0.07 to 0.60 Vp-p*5 0.07 to 0.55 Vp-p*6	±35 mV ±12% of amplitude
Offset (Vth)	$-2.0-\frac{\text{Amp}}{2}$ to $+3.3-\frac{\text{Amp}}{2}$ V	±65 mV ±10% of offset (Vth) ±(Eye Amplitude Accuracy / 2) *7,*8
Cross point*11	Amplitude: 0.50 Vp-p	Fixed at 50%
Tr/Tf*11	Amplitude: 0.50 Vp-p	9.0 ps (20 to 80%)*1,*7,*9 8.5 ps (20 to 80%)*2,*3,*7,*9 9.5 ps (20 to 80%)*4,*7,*9 8.8 ps (20 to 80%)*5,*6,*7,*9
Jitter*10,*11,*12	Amplitude: 0.50 Vp-p	6.0 ps p-p*1,*2,*3,*4,*5,*6,*9 600 fs rms*1,*2,*3,*4,*5,*6,*9

*1: When using the J1789A cable with MU196020A-001, at 32.1 Gbit/s

*2: When using the J1789A cable with MU196020A-002, at 58.2 Gbit/s

*3: When using the J1789A cable with MU196020A-003, at 64.2 Gbit/s

*4: When using the J1790A cable with MU196020A-001, at 32.1 Gbit/s

*5: When using the J1790A cable with MU196020A-002, at 58.2 Gbit/s

*6: When using the J1790A cable with MU196020A-003, at 64.2 Gbit/s

*7: Except when **Emphasis** is turned **On** with the MU196020A-x11 installed.

*8: For PAM4, when setting each of PAM4 Amplitude (3/2, 2/1 and 1/0) equally to 33%.

*9: Typical value

*10: The jitter specification value is defined assuming that the oscilloscope with residual jitter less than 200 fs (RMS) is used.

*11: NRZ

*12: Count of measured jitters: 30, at a constant temperature between 20 and 30°C

(2) Device connection

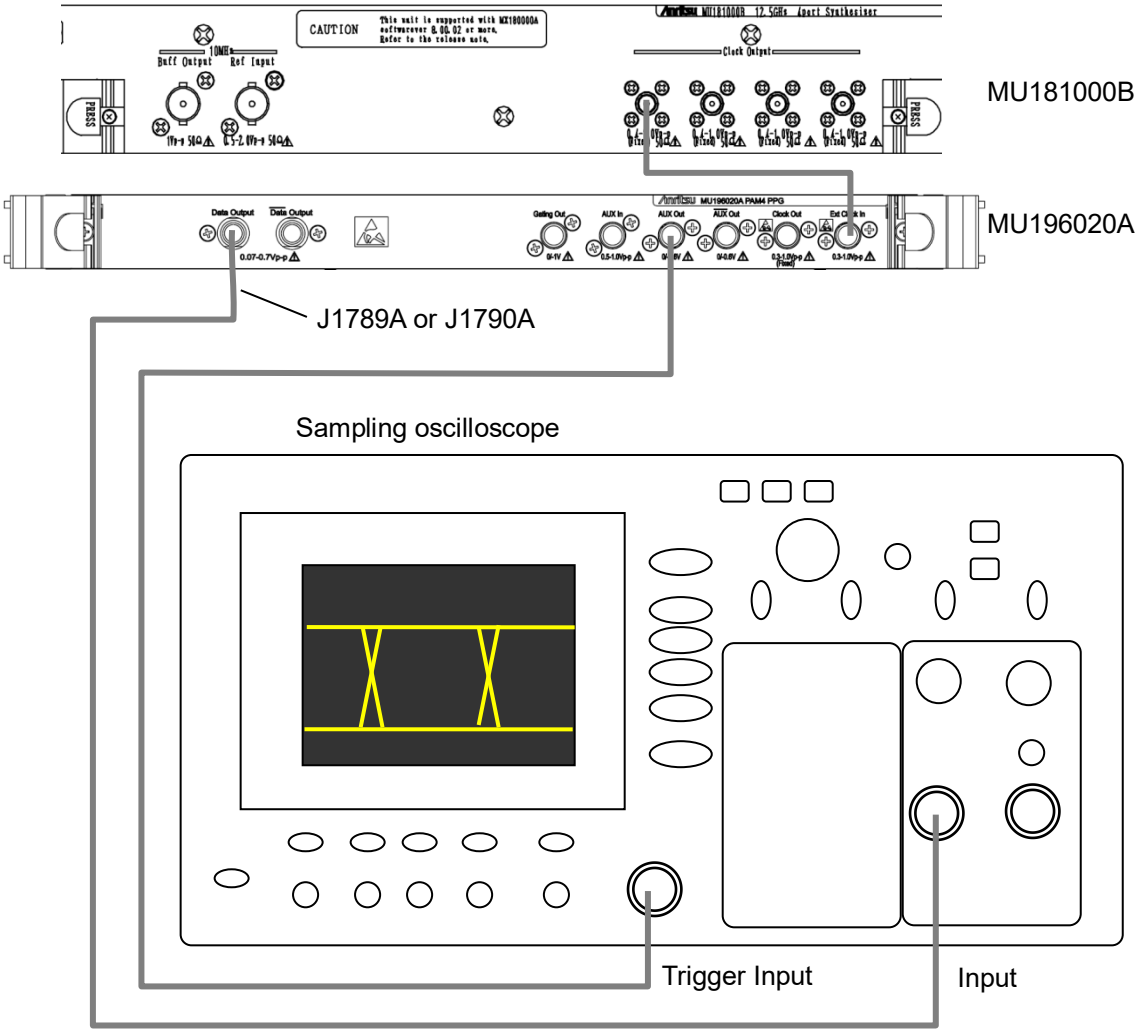


Figure 5.3.2-1 Connection Diagram for Waveform Test

When using the MU181000A instead of MU181000B, attach the 6 dB Coaxial Attenuator to the Clock Output connector.
For waveform test, use a sampling oscilloscope that has a 70 GHz band and that has a residual jitter of less than 200 fs (RMS).

(3) Procedure

1. Mount the MU196020A onto the MP1900A, and turn on the MP1900A with the cables unconnected.
2. Set the modulation mode of the MU196020A to **NRZ**.
3. On the **Output** tab of the MU196020A, set as follows:

   Bit Rate

MU196020A-001	32.100 000
MU196020A-002	58.200 000
MU196020A-003	64.200 000

Ext ATT Factor	0.000
Amplitude	0.070
Offset	AC OFF, 0.000, Vth
Half Period Jitter	0
Delay	0

In the **Cable for Data Output** box, select the model name of the cable used for connection to the sampling oscilloscope.

4. On the **Output** tab of the MU196020A, set the Data output amplitude, offset, and cross point to be tested.
5. On the **Pattern** tab of the MU196020A, set the test pattern.

   Since the specification parameters are evaluated by the eye pattern observation, set the test pattern to PRBS, 2^31–1.
6. Select a trigger signal to input to the sampling oscilloscope. Select 1/N Clock in the AUX Output dropdown list on the **Misc1** tab of the MU196020A, and set the division ratio according to the sampling oscilloscope used.
7. Turn off the MP1900A when setting the parameters completely.
8. Connect the measuring instrument cables as shown in Figure 5.3.2-1. Be sure to connect the V210 terminators (standard accessories) to the Output connectors to which cables are not connected.
9. Turn on the MP1900A and the measuring instruments, and warm them up.
10. Enable the MP1900A signal output (ON) and output signals.
11. Measure the amplitude with the sampling oscilloscope, and record it.
12. On the **Output** tab of the MU196020A, set the value for **Amplitude**.

When using MU19020A-002 and J1790A cable:	0.600
When using MU19020A-003 and J1790A cable:	0.550
Other than those above:	0.700

13. Measure the amplitude with the sampling oscilloscope, and record it.
14. On the **Output** tab of the MU196020A, set the value for **Offset**.

When using MU19020A-002 and J1790A cable:	–2.300
When using MU19020A-003 and J1790A cable:	–2.275
Other than those above:	–2.350

15. Measure the middle level of the eye with the sampling oscilloscope, and record it.

16. On the **Output** tab of the MU196020A, set **Amplitude** to 0.070 and **Offset** to 3.265.
17. Measure the middle level of the eye with the sampling oscilloscope, and record it.
18. On the **Output** tab of the MU190020A, set **Amplitude** to 0.500 and **Offset** to 0.000.
19. Measure the cross point, Tr/Tf and jitter with the sampling oscilloscope, and record them.
20. Set the modulation mode of the MU196020A to **PAM4**.
21. On the **Output** tab of the MU196020A, set **Total Amplitude** to 0.070 and touch **Even**.
22. Measure the amplitude with the sampling oscilloscope, and record it.
23. On the **Output** tab of the MU196020A, set the value for **Total Amplitude**.

    When using MU19020A-002 and J1790A cable: 0.600
    When using MU19020A-003 and J1790A cable: 0.550
    Other than those above: 0.700
24. Measure the amplitude with the sampling oscilloscope, and record it.
25. On the **Output** tab of the MU196020A, set the value for **Offset**.

    When using MU19020A-002 and J1790A cable: –2.300
    When using MU19020A-003 and J1790A cable: –2.275
    Other than those above: –2.350
26. Measure the middle level of Level 2/1 with the sampling oscilloscope, and record it.
27. On the **Output** tab of the MU196020A, set **Total Amplitude** to 0.070 and **Offset** to 3.265.
28. Measure the middle level of Level 2/1 with the sampling oscilloscope, and record it.
29. Use a coaxial cable to connect the $\overline{\text{Data}}$ Output connector of the MU196020A and the Input connector of the sampling oscilloscope. Be sure to connect the V210 terminators (standard accessories) to the Output connectors to which cables are not connected. Repeat the procedure from steps 3 to 28.

5.3.3 Input Level

(1) Specifications

Table 5.3.3-1 Specifications

Option	Specifications	
MU196040A-001	NRZ Input amplitude: PAM4 Input amplitude: Threshold voltage:	0.05 to 1.0 Vp-p 0.3 to 1.0 Vp-p –3.5 to +3.3 V
MU196040B-001	NRZ Input amplitude: PAM4 Input amplitude: Threshold voltage:	0.05 to 1.0 Vp-p 0.3 to 1.0 Vp-p –3.5 to +3.3 V
MU196040B-002, MU196040B-001+y12	NRZ Input amplitude (≤32.1 Gbit/s): NRZ Input amplitude (>32.1 Gbit/s): PAM4 Input amplitude (≤32.1 Gbaud): PAM4 Input amplitude (>32.1 Gbaud): Threshold voltage:	0.05 to 1.0 Vp-p 0.1 to 1.0 Vp-p 0.3 to 1.0 Vp-p 0.4 to 1.0 Vp-p –3.5 to +3.3 V

(2) Connection

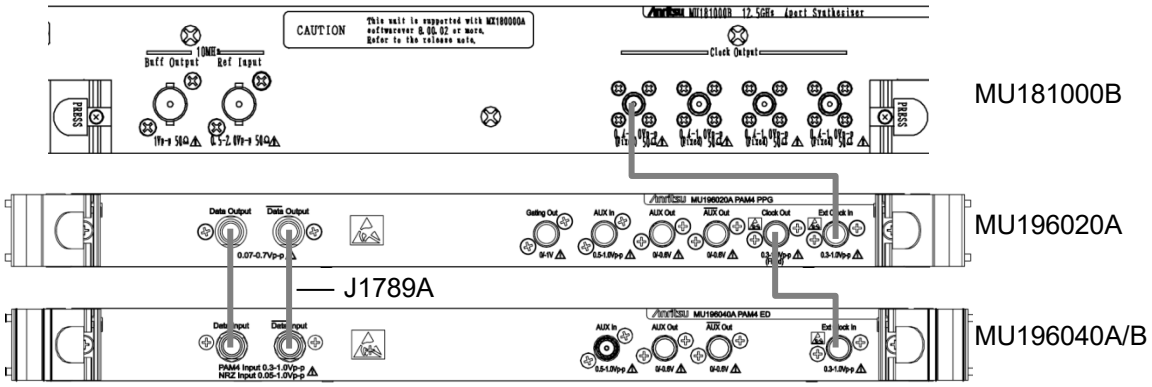

Figure 5.3.3-1 Connection Diagram for Input Level Test

(3) Procedure

1. Connect devices and configure the settings in the same manner as shown in steps 1 to 5 in Section 5.3.1.
2. Connect the measuring instrument cables as shown in Figure 5.3.3-1.
3. Turn on the MP1900A and the measuring instruments, and warm them up.
4. Configure the settings for the MU196020A and MU196040A/B as shown in items 1 to 4 of Table 5.3.3-2.

   To perform a test at more than 32.1 Gbit/s when using the MU196040B, configure the settings as shown in items 1, 3, 5 and 6 of Table 5.3.3-2.
5. Set the output of the MU196020A to ON and touch **Start** of the MU196040A/B.

6. Touch **Auto Search**. In the **Mode** list, select **Fine**, and then touch **Start**. Check that the threshold voltage and phase are adjusted to optimum values and that no error occurs.
7. Set the modulation mode of MU196020A and MU196040A/B to **PAM4**.
8. Configure the settings for the MU196020A and MU196040A/B as shown in items 1 to 4 of Table 5.3.3-3.

   To perform a test at more than 32.1 Gbaud when using the MU196040B, configure the settings as shown in items 1, 3, 5 and 6 of Table 5.3.3-3. Also, on the **Input** tab of the MU196040B, in the **Input Condition** box, select **Differential**.
9. Disconnect the cable from the Data Input connector, but leave t the $\overline{\text{Data}}$ Input connector connected. Be sure to connect the V210 terminator (standard accessory) to the Output connector of MU196020A to which a cable is not connected.
10. On the **Input** tab of the MU196040A/B, set **Single-Ended** and **XData** for **Input Condition**. Repeat steps 4 to 8 to make sure that no errors have occurred.

Table 5.3.3-2 NRZ Input Level Test Setting (MU196040A/B)

	MU196020A			MU196040A/B	
No.	Termination	Amplitude [Vp-p]	Offset (Vth) [V]	Termination	Threshold voltage [V]*3
1	GND	0.7	–2.35	GND	–2.350
2		0.05*1	–0.225*1		–0.225
3		0.7	+2.95		+2.950
4		0.05*2	+0.305*2		+0.305
5		0.1	–2.05		–2.650
6		0.1	+3.25		+3.250

*1: To output a signal with an amplitude of 0.05 Vp-p and an offset of −0.225 V, connect the Precision Fixed Attenuator 20 dB (optional accessory: 41V-20) and the Precision Adaptor (optional accessory: 34VFK50) respectively to the Data Output and $\overline{\text{Data}}$ Output connectors of the MU196020A. And, set the MU196020A as follows:

Amplitude: 0.5 Vp-p
Offset: −2.25 V

*2: To output a signal with an amplitude of 0.05 Vp-p and an offset of +0.305 V, connect the Precision Fixed Attenuator 20 dB (optional accessory: 41V-20) and the Precision Adaptor (optional accessory: 34VFK50) respectively to the Data Output and $\overline{\text{Data}}$ Output connectors of the MU196020A. And, set the MU196020A as follows:

Amplitude: 0.5 Vp-p
Offset: +3.05 V

*3: In the **Mode** list, select **Fine (NRZ)**, and then start Auto Search to adjust the threshold voltage and phase to optimum values.

Table 5.3.3-3 PAM4 Input Level Test Setting (MU196040A/B)

	MU196020A			MU196040A/B	
No.	Termination	Amplitude [Vp-p]	Offset (Vth) [V]	Termination	Threshold voltage [V]*
1	GND	0.7	–2.35	GND	Upper: –2.350 + 0.233 (–2.117) Middle: –2.350 Lower: –2.350 – 0.233 (–2.583)
2		0.3	–2.15		Upper: –2.150 + 0.100 (–2.050) Middle: –2.150 Lower: –2.150 – 0.100 (–2.250)
3		0.7	+2.95		Upper: +2.950 + 0.233 (+3.183) Middle: +2.950 Lower: +2.950 – 0.233 (+2.717)
4		0.3	+3.15		Upper: +3.150 + 0.100 (+3.250) Middle: +3.150 Lower: +3.150 – 0.100 (+3.050)
5		0.4	–2.20		Upper: –2.20 + 0.133 (–2.067) Middle: –2.200 Lower: –2.200 – 0.133 (–2.333)
6		0.4	+3.10		Upper: +3.100 + 0.133 (+3.333) Middle: +3.100 Lower: +3.100 – 0.133 (+2.967)

*: In the **Mode** list, select **Fine (PAM4)**, and then start Auto Search to adjust the threshold voltage and phase to optimum values.

Note:

When changing the termination condition, configure the settings of the MU196020A and the MU196040A/B in the following order. The MU196020A and the MU196040A/B may be damaged if the settings are configured in an incorrect order or the termination condition is not set correctly.

(1) Set the output of the MU196020A to OFF.

(2) Set the termination condition for the MU196040A/B to GND.

(3) Change the termination condition for the MU196020A.

(4) Set the termination condition for the MU196040A/B to that for the MU196020A.

5.3.4 Pattern

(1) Specifications

- PRBS pattern (NRZ, PAM4)
- Zero Substitution pattern (NRZ)
- SSPRQ pattern (PAM4)

(2) Connection

Refer to Figure 5.3.3-1 for the device connection.

(3) Procedure

1. Configure the settings in the same manner as shown in steps 1 to 5 in Section 5.3.1.
2. Connect the measuring instrument cables as shown in Figure 5.3.3-1.
3. Turn on the MP1900A and the measuring instruments, and warm them up.
4. Set the modulation mode of MU196020A and MU196040A/B to **NRZ**.
5. Set the output of the MU196020A to ON and touch **Start** of the MU196040A/B. Adjust the phase as required, and check that no error occurs.
6. On the **Pattern** tab of both of the MU196040A/B and the MU196020A, switch the PRBS pattern length to the following values in order, and check that no error occurs.

   2^7–1, 2^9–1, 2^10–1, 2^11–1, 2^13–1, 2^15–1, 2^20–1, 2^23–1, 2^31–1.
7. Set the PRBS pattern length of both MU196040A/B and MU196020A to 2^31–1. Then, check that no error occurs for the following four modulation type and logic combinations:

Table 5.3.4-1 Modulation Type and Logic Settings

	Modulation Type	Logic	Logic MSB	Logic LSB
1	NRZ	POS	–	–
2	NRZ	NEG	–	
3	PAM4	–	POS	POS
4	PAM4	–	NEG	NEG

8. Set the modulation mode of MU196020A and MU196040A/B to **NRZ**.
9. For both the MU196040A/B and the MU196020A, set the test pattern to Zero Substitution, then, switch the Length to the following values in order, and check that no error occurs.

   2^7, 2^9, 2^10, 2^11, 2^15, 2^20, 2^23,2^7–1, 2^9–1, 2^10–1, 2^11–1, 2^15–1, 2^20–1, 2^23–1.

10. Set the modulation mode of MU196020A and MU196040A/B to **PAM4**.
11. Change the test patterns of both MU196040A/B and MU196020A to SSPRQ, and check that no error occurs.

5.3.5 Error Detection

(1) Specifications

Error rate:	0.0000×10^{-16} to 1.0000
Error count:	0 to 1×10^{16}
Error free interval (EFI):	0.0000 to 100.0000%
Error interval (EI):	0 to 1×10^{16}
Clock frequency:	
MU196040A-001	2.4 to 32.1 GHz,
MU196040B-001	2.4 to 32.1 GHz,
MU196040B-002	2.4 to 64.2 GHz,
Accuracy	±(10 ppm + 1 kHz)

(2) Connection

Refer to Figure 5.3.3-1 for the device connection.

(3) Procedure

1. Configure the settings in the same manner as shown in steps 1 to 5 in Section 5.3.1.
2. Connect the measuring instrument cables as shown in Figure 5.3.3-1.
3. Turn on the MP1900A and the measuring instruments, and warm them up.
4. Set the frequency of the MU181000B to 10 GHz.
5. Set the modulation mode of MU196020A and MU196040A/B to **NRZ**.
6. Check that MU196020A is set to NRZ 20 Gbit/s, turn **ON** the Output, and then touch **Start** of the MU196040A/B. Adjust the phase as required, and check that no error occurs.
7. Turn On error insertion of the MU196020A, and make sure that the ER measurement results on the **Result** tab of the MU196040A/B match the values set on the **Error Addition** tab on the MU196020A.
8. Set "Single" for error insertion of the MU196020A (set Variation to **Single** on the MU196020A **Error Addition** tab).
9. In the Gating field of the **Measurement** tab of the MU196040A/B, set **Cycle** to **Single**, and set the measurement time to 10 seconds.

10. Touch the **Start** button of the MU196040A/B. While the measurement is running for 10 seconds, touch **Single** once on the **Error Addition** tab of the MU196020A.

    When the measurement has finished, check that the measurement results are as follows.

Error rate (ER):	5.0000E–12
Error count (EC):	1.0000E–00
Error free interval (%EFI):	99.9900%
Error interval (EI):	1

Chapter 6 Maintenance

This chapter describes maintenance of the MP1900A modules.

6.1 Daily Maintenance

- Wipe off any external stains with a cloth damped with diluted mild detergent.
- Vacuum away any accumulated dust or dirt with a vacuum cleaner.
- Tighten any loose parts fixed with screws, using the specified tools.

6.2 Cautions on Storage

Wipe off any dust, soil, or stain on the MP1900A modules prior to storage. Install the supplied Opens or Terminators to the connectors on the panel.

Avoid storing the MP1900A modules in any of the following locations:

- In direct sunlight for extended periods
- Outdoors
- In excessively dusty locations
- Where condensation may occur
- In liquids, such as water, oil, or organic solvents, and medical fluids, or places where these liquids may adhere
- In salty air or in place chemically active gases (sulfur dioxide, hydrogen sulfide, chlorine, ammonia, nitrogen dioxide, or hydrogen chloride etc.) are present
- Where toppling over may occur
- In the presence of lubricating oil mists
- In places at an altitude of more than 2,000 m
- In the presence of frequent vibration or mechanical shock, such as in cars, ships, or airplanes
- Under the following temperature and humidity conditions:
  Temperature range of ≤ –20°C or ≥ 60°C
  Humidity range of ≥ 85%

Recommended storage conditions

In addition to the abovementioned storage cautions, the following environment conditions are recommended for long-term storage.

- Temperature range of 5 to 30°C
- Humidity range of 40 to 75%
- Slight daily fluctuation in temperature and humidity

6.3 Transportation

Use the original packing materials, if possible, when packing the MP1900A modules for transport. If you do not have the original packing materials, pack the MP1900A modules according to the following procedure. When handling the MP1900A modules, always wear clean gloves, and handle it gently so as not to damage it.

<Procedure>

1. Use a dry cloth to wipe off any stain or dust on the exterior of the MP1900A module.
2. Check for loose or missing screws.
3. Provide protection for structural protrusions and parts that can easily be deformed, and wrap the MP1900A module with a sheet of polyethylene. Finally, cover with moisture-proof paper.
4. Place the wrapped MP1900A module into a cardboard box, and tape the flaps with adhesive tape. Furthermore, store it in a wooden box as required by the transportation distance or method.
5. During transportation, place it under an environment that meets the conditions described in 6.2 “Cautions on Storage”.

6.4 Calibration

Regular maintenance such as periodic inspections and calibration is essential for the Signal Quality Analyzer-R series for long-term stable performance. Regular inspection and calibration are recommended for using the Signal Quality Analyzer Series in its prime condition at all times. The recommended calibration cycle after delivery of the Signal Quality Analyzer Series is twelve months.

If you require support after delivery, contact an Anritsu Service and Sales office. Contact information can be found on the last page of the printed version of this manual, and is available in a separate file on the PDF version.

We may not provide calibration or repair if any of the following cases apply.

- Seven or more years have elapsed after production and parts for the instrument are difficult to obtain, or it is determined that reliability cannot be maintained after calibration/repair due to significant wear.
- Circuit changes, repair, or modifications are done without our approval.
- It is determined that the repair cost would be higher than the price of a new item

Chapter 7 Troubleshooting

This chapter describes how to determine if a failure has occurred when a problem occurs during the MP1900A module operation.

7.1 Problems That Occur When Replacing Modules

Table 7.1-1 Remedies for Problems That Occur When Replacing MP1900A Modules

Symptom	Check Item	Remedy
Module recognition failed.	Is the module(s) installed properly?	Reinstall the module according to 3.3 "Installing and Removing Modules" in the *MP1900A Signal Quality Analyzer-R Operation Manual*.
	Are the appropriate modules installed?	Confirm the MP1900A software version and the supported modules by visiting the MP1900A Series Signal Quality Analyzers-R product information page in the Anritsu web site (https://www.anritsu.com). If the appropriate modulus are not recognized, it may have failed. Contact an Anritsu Service and Sales office. Contact information can be found on the last page of the printed version of this manual, and is available in a separate file on the PDF version.

7.2 Problems That Occur During Output Waveform Observation

Table 7.2-1 Remedies for Problems That Occur During Waveform Observation

Symptom	Check Item	Remedy
Output waveform cannot be monitored normally.	Is the **Data** or **Clock** on the **Output** tab set to **ON**?	On the **Output** tab, set **Data** or **Clock** to be output to ON.  When Output is **OFF**, turn it **ON** by touching the list box.
	Is Output **ON** ()?	On the top left corner of the screen, touch  to turn **ON**.
	Is the operating clock supplied normally?	When using the internal clock, check the bit rate setting. When the clock is supplied externally, check the connection interface. Refer to 3.1 “Panel Layout” for the interface.
	Is the trigger clock set correctly?	It is recommended to use the signal output from the AUX Output connector as the trigger clock. Check the AUX Output connector settings and interface with the sampling oscilloscope which measures the waveforms.
	Is the electrical interface cable loose?	Tighten the connector.
	Do the cables used have good high-frequency characteristics?	Use the cables and connectors that support 65 GHz or higher frequency band. If the bit rate is 32.1 Gbit/s (Gbaud) or less, use the cables and connectors that support 40 GHz or higher frequency band.

7.3 Problems That Occur During Error Rate Measurement

Table 7.3-1 Remedies for Problems That Occur During Error Rate Measurement

Symptom	Check Item	Remedy
An error occurs.	Is the connection interface with the DUT correct?	Check that the data rate, level, offset and termination conditions match those of the DUT.
	Are the logical patterns correctly set on the MU196020A and the error detector (ED)?	Check if the patterns generated by the MU196020A are set such that they can be received by the DUT, and if the set patterns generated by the DUT and detected by the ED are the same. If the DUT outputs the patterns from the MU196020A as they are, connect the MU196020A and ED directly to check if an error is detected. Prevent the bit rate (baud rate) from exceeding 32.1 Gbit/s (Gbaud) when using MU196040A or MU196040B-001.
	Is the error addition function set to off?	On the **Error Addition** tab, check that the Error Addition switch is set to **OFF**.
	Is the electrical interface cable loose?	Tighten the connector.
	Do the cables used have good high-frequency characteristics?	Use the cables and connectors that support 65 GHz or higher frequency band. If the bit rate is 32.1 Gbit/s (Gbaud) or less, use the cables and connectors that support 40 GHz or higher frequency band.
	Are sufficient phase margin and threshold margin are secured?	Adjust the phase and offset to between the MU196020A and the DUT and between the DUT and ED, respectively so that they can be optimal.

7.4 Synchronization Failures

Table 7.4-1 Remedies for Synchronization Failures

Item	Check Item	Remedy
Input conditions	Do the quality, status and length of the connection cables comply with the specifications?	Replace the cables with appropriate ones in the following cases: • Frequency characteristics are not sufficient. • Loss is large. • Cables and connectors are damaged. • Connectors are contaminated.
	Is the cable connection correct and secure?	Confirm the destination and check if the connector is tightened securely.
	Are the single and differential (50/100 Ω) inputs set correctly?	Set the correct value.
	Is the input level correct?	Check the level by using an oscilloscope, etc.
	Are the input bit rate and clock frequency set correctly?	Set the bit rate and clock frequency correctly. ***Note:*** Use the frequency counter to check the current clock frequency.
	Is the frequency set near the bit rate when using clock recovery?	Set the frequency near the bit rate to be used.
	Has the clock loss display disappeared?	Check the data and clock signals to be input or clock recovery settings.
Termination conditions	Was the termination potential adjusted?	Set the termination potential correctly. ***Note:*** Incorrect setting may result in unit failure.
Clock setting conditions	Do the clock settings for PAM4 PPG and PAM4 ED match?	PAM4 PPG: On the **Misc2** tab, check the settings for **Output Clock Rate** and **Operation Baud Rate** (when **Clock Source** is **External**). On the **Output** tab, check the setting for **Baud Rate**. PAM4 ED: On the **Input** tab, check the setting for **Operation Baud Rate** in the **Clock** area (when **Selection** is set to **External Clock**). On the **Result** tab, check the **Clock Count** or **Frequency** value. ***Note:*** Without properly configured clock settings, expected measurement results cannot be obtained.

Table 7.4-1 Remedies for Synchronization Failures (Cont'd)

Item	Check Item	Remedy
PAM4 symbol synchronization conditions	Has symbol synchronization been established between PAM4 MSB and LSB?	In Diagnostics Mode, check that **MSB/LSB Diff** is 0. If it is 0, symbol synchronization has been established. If, on the **Result** tab of the PAM4 ED, either or both of **Upper Eye Threshold** and **Lower Eye Threshold** are set to a voltage within the range of **Middle Eye Height**, "-----" may be displayed in **MSB/LSB Diff**. ***Note:*** MSB/**LSB Diff** must be 0 when performing symbol measurement.
PAM4 Auto Search conditions	Has the Auto Search function failed?	In Diagnostics Mode, check that **MSB/LSB Diff** is within ±48. Make sure the input level is sufficient. ***Note:*** **MSB/LSB Diff** must be within ±48 when performing Auto Search.
PAM4 pattern conditions	Is the pattern of PAM4 MSB and LSB different?	In Diagnostics Mode, check that symbol synchronization can be established between MSB and LSB. As necessary, change the logic polarity and coding condition settings for MSB or LSB.

Appendix A Pseudo-Random Pattern

A.1 Pseudo-Random Pattern

Table A.1-1 shows the principle of pseudo-random pattern generation. A pseudo-random pattern is expressed in an N-th degree generating polynomial, with one cycle of 2^n-1. For a PRBS pattern with a cycle of 2^n-1, a pattern of successive "1s" for the number N is generated once in a cycle.

For the output level of the PRBS pattern, "1" indicates the low level and "0" indicates the high level when Logic is set to POS (positive).

The mark ratios of the PRBS pattern are generated as shown in the block diagrams of Table A.1-1.

Table A.1-1 Principle of pseudo-random pattern generation

Cycle	Generating polynomial	Pattern generation block diagram
2^7-1	$1 + X^6 + X^7$	2^9-1	$1 + X^5 + X^9$	$2^{10}-1$	$1 + X^7 + X^{10}$	$2^{11}-1$	$1 + X^9 + X^{11}$	$2^{13}-1$	$1 + X + X^2 + X^{12} + X^{13}$	$2^{15}-1$	$1 + X^{14} + X^{15}$	$2^{20}-1$	$1 + X^3 + X^{20}$	
$2^{23}-1$	$1 + X^{18} + X^{23}$	$2^{31}-1$	$1 + X^{28} + X^{31}$	
N: Shift register (N=1, 2, 3….)

⊕: Exclusive OR

A.2 Zero-Substitution Pattern

A string of successive "0s" for the number of set bits is made by substituting "0" for the pattern that follows the longest bit string of successive 0s in a PRBS pattern. In this event, if the bit immediately after the bit substituted to "0" is also "0", it is inverted to "1".

Example: For a PRBS pattern with a cycle of 2^7, the largest number of successive 0s is 6 bits (7 – 1), and zero substitution starts from the following position:

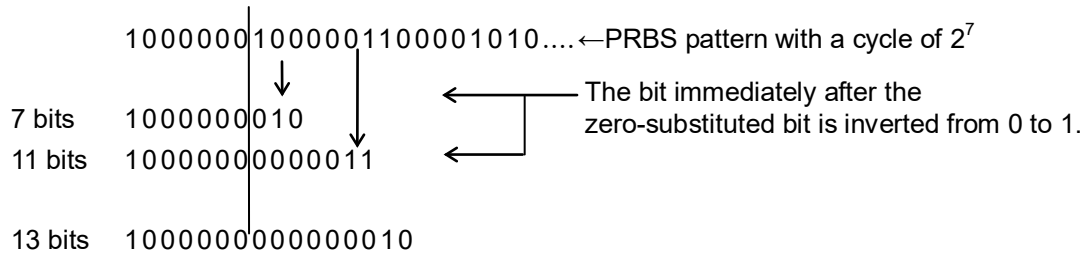

Figure A.2-1 Zero-Substitution Pattern

Appendix B List of Default Settings

Appendix B lists the factory default settings for MU196020A, MU196040A, and MU196040B.

To initialize all settings, select **Menu** → **Initialize**.
