

Waveform File for Short Range Wireless Operation Manual

15th Edition

- For safety and warning information, please read this manual before attempting to use the equipment.
- Additional safety and warning information is provided within the MT8870A Universal Wireless Test Set Operation Manual. Please also refer to it before using the equipment.
- Keep this manual with the equipment.

ANRITSU CORPORATION

Safety Symbols

To prevent the risk of personal injury or loss related to equipment malfunction, Anritsu Corporation uses the following safety symbols to indicate safety-related information. Ensure that you clearly understand the meanings of the symbols BEFORE using the equipment. Some or all of the following symbols may be used on all Anritsu equipment. In addition, there may be other labels attached to products that are not shown in the diagrams in this manual.

Symbols used in manual

DANGER

This indicates a very dangerous procedure that could result in serious injury or death if not performed properly.

WARNING

This indicates a hazardous procedure that could result in serious injury or death if not performed properly.

CAUTION

This indicates a hazardous procedure or danger that could result in light-to-severe injury, or loss related to equipment malfunction, if proper precautions are not taken.

Safety Symbols Used on Equipment and in Manual

The following safety symbols are used inside or on the equipment near operation locations to provide information about safety items and operation precautions. Ensure that you clearly understand the meanings of the symbols and take the necessary precautions BEFORE using the equipment.

This indicates a prohibited operation. The prohibited operation is indicated symbolically in or near the barred circle.

This indicates an obligatory safety precaution. The obligatory operation is indicated symbolically in or near the circle.

This indicates a warning or caution. The contents are indicated symbolically in or near the triangle.

This indicates a note. The contents are described in the box.

These indicate that the marked part should be recycled.

Equipment Certificate

Anritsu Corporation guarantees that this equipment was inspected at shipment and meets the published specifications.

Anritsu Warranty

- During the warranty period, Anritsu Corporation will repair or exchange this software free-of-charge if it proves defective when used as described in the operation manual.
- The warranty period is 6 months from the purchase date.
- The warranty period after repair or exchange will remain 6 months from the original purchase date, or 30 days from the date of repair or exchange, depending on whichever is longer.
- This warranty does not cover damage to this software caused by Acts of God, natural disasters, and misuse or mishandling by the customer.

In addition, this warranty is valid only for the original equipment purchaser. It is not transferable if the equipment is resold.

Anritsu Corporation shall assume no liability for damage or financial loss of the customer due to the use of or a failure to use this equipment, unless the damage or loss is caused due to Anritsu Corporation's intentional or gross negligence.

Anritsu Corporation Contact

In the event of this equipment malfunctions, please contact an Anritsu Service and Sales office. Contact information can be found on the last page of the printed version of this manual, and is available in a separate file on the PDF version.

Also, the Anritsu website provides you with contact information and a contact form.

Notes On Export Management

- We assume no responsibility if this product is re-exported and used without our approval since it may not comply with the safety standards, etc., of specific countries.
- This product and its manuals may require an Export License/Approval by the Government of the product's country of origin for re-export from your country.

Before re-exporting the product or manuals, please contact us to confirm whether they are export-controlled items or not.

For more details, visit

<https://www.anritsu.com/support/export-procedures>.

When you dispose of the products or manuals subject to export control, they must be physically destroyed or shredded so as not to be unlawfully used for military purpose.

Software End-User License Agreement (EULA)

Please carefully read and accept this Software End-User License Agreement (hereafter this EULA) before using (includes executing, copying, installing, registering, etc.) this Software (includes programs, databases, scenarios, etc., used to operate, set, etc., Anritsu electronic equipment, etc.). By using this Software, you shall be deemed to have agreed to be bound by the terms of this EULA, and Anritsu Corporation (hereafter Anritsu) hereby grants you the right to use this Software with the Anritsu specified equipment (hereafter Equipment) for the purposes set out in this EULA.

Article 1. Grant of License and Limitations

1. You may not sell, transfer, rent, lease, lend, disclose, sublicense, or otherwise distribute this Software to third parties, whether or not paid therefor.
2. You may make one copy of this Software for backup purposes only.
3. You are not permitted to reverse engineer, disassemble, decompile, modify or create derivative works of this Software.
4. This EULA allows you to install one copy of this Software on one piece of Equipment.

Article 2. Disclaimers

To the extent not prohibited by law, in no event shall Anritsu be liable for direct, or any incidental, special, indirect or consequential damages whatsoever, including, without limitation, damages for loss of profits, loss of data, business interruption or any other commercial damages or losses, and damages claimed by third parties, arising out of or related to your use or inability to use this Software, unless the damages are caused due to Anritsu's intentional or gross negligence.

Article 3. Limitation of Liability

1. If a fault (bug) is discovered in this Software, making this Software unable to operate as described in the operation manual or specifications even though you have used this Software as described in the manual, Anritsu shall at its own discretion, fix the bug, or replace the software, or suggest a workaround, free-of-charge, provided, however, that the faults caused by the following items and any of your lost or

damaged data whatsoever shall be excluded from repair and the warranty.

- i) If this Software is deemed to be used for purposes not described in the operation manual or specifications.
 - ii) If this Software has been used in conjunction with other non-Anritsu-approved software.
 - iii) If this Software or the Equipment has been modified, repaired, or otherwise altered without Anritsu's prior approval.
 - iv) For any other reasons out of Anritsu's direct control and responsibility, such as but not limited to, natural disasters, software virus infections, or any devices other than this Equipment, etc.
2. Expenses incurred for transport, hotel, daily allowance, etc., for on-site repairs or replacement by Anritsu engineers necessitated by the above faults shall be borne by you.
 3. The warranty period for faults listed in Section 1 of this Article shall be either 6 months from the date of purchase of this Software or 30 days after the date of repair or replacement, whichever is longer.

Article 4. Export Restrictions

You shall not use or otherwise export or re-export directly or indirectly this Software except as authorized by the laws and regulations of Japan and the United States, etc. In particular, this Software shall not be exported or re-exported (a) into any Japan or US embargoed countries or (b) to anyone restricted by the Japanese export control regulations, or the US Treasury Department's list of Specially Designated Nationals or the US Department of Commerce Denied Persons List or Entity List. In using this Software, you warrant that you are not located in any such embargoed countries or on any such lists. You also agree that you will not use or otherwise export or re-export this Software for any purposes prohibited by the Japanese and US laws and regulations, including, without limitation, the development, design and manufacture or production of missiles or nuclear, chemical or biological weapons of mass destruction, and conventional weapons.

Article 5. Change of Terms

Anritsu may change without your approval the terms of this EULA if the changes are for the benefit of general customers, or are reasonable in light of the purpose of this EULA and circumstances of the changes. At the time of change, Anritsu will inform you of those changes and its effective date, as a general rule 45 days, in advance on its website, or in writing or by e-mail.

Article 6. Termination

1. Anritsu may terminate this EULA immediately if you violate any conditions described herein. This EULA shall also be terminated immediately by Anritsu if there is any good reason that it is deemed difficult to continue this EULA, such as your violation of Anritsu copyrights, patents, etc. or any laws and ordinances, or if it turns out that you belong to an antisocial organization

or has a socially inappropriate relationship with members of such organization.

2. You and Anritsu may terminate this EULA by a written notice to the other party 30 days in advance.

Article 7. Damages

If Anritsu suffers any damages or loss, financial or otherwise, due to your violation of the terms of this EULA, Anritsu shall have the right to seek proportional damages from you.

Article 8. Responsibility after Termination

Upon termination of this EULA in accordance with Article 6, you shall cease all uses of this Software immediately and shall as directed by Anritsu either destroy or return this Software and any backup copies, full or partial, to Anritsu.

Article 9. Negotiation for Dispute Resolution

If matters of interpretational dispute or items not covered under this EULA arise, they shall be resolved by negotiations in good faith between you and Anritsu.

Article 10. Governing Law and Court of Jurisdiction

This EULA shall be governed by and interpreted in accordance with the laws of Japan without regard to the principles of the conflict of laws thereof, and any disputes arising from or in relation to this EULA that cannot be resolved by negotiation described in Article 9 shall be subject to and be settled by the exclusive agreed jurisdiction of the Tokyo District Court of Japan.

Revision History:

February 29th, 2020
December 17th, 2021

Cautions Against Computer Virus Infection

- Copying files and data
Only files that have been provided directly from Anritsu or generated using Anritsu equipment should be copied to the instrument.
All other required files should be transferred by means of USB flash drive or CompactFlash media after undergoing a thorough virus check.
- Adding software
Do not download or install software that has not been specifically recommended or licensed by Anritsu.
- Network connections
Ensure that the network has sufficient anti-virus security protection in place.

About This Manual

This manual mainly describes the operation of the Waveform File for Short Range Wireless (SRW).

Products relevant to the MT8870A Universal Wireless Test Set include:

- MT8870A Universal Test Set (main unit)
- Modules installed in the MT8870A
- Application software installed in the MT8870A
- Control software installed in a PC to control the MT8870A remotely

These products are referred to as the "Universal Wireless Test Set Series". The operation manuals of the Universal Wireless Test Set Series consist of separate documents for the main unit, module(s), application software, and control software, as shown below.  indicates this manual.

Convention Used in This Manual

Except where there is a good reason to do otherwise, this manual assumes the use of MT8870A and MU887000A.

Note that the descriptions in this manual also apply to MT8872A, MU887001A, or MU887002A. MU887000A/01A means the MU887000A or MU887001A.

Additionally, the Anritsu management code of the options described in this manual is “0” unless there is a reason.

The option number: The option number is indicated by three digits.

MU88700XA- x x x

Chapter 1 General Information

This chapter outlines the short range wireless (SRW) waveform files.

1.1	About this Manual.....	1-2
1.2	SRW Receiver Testing	1-3

1.1 About this Manual

This manual provides details of the short range wireless (SRW) waveforms for use with the MT8870A Universal Wireless Test Set.

The waveform files can be transmitted from the MT8870A to the device under test (DUT) for use in SRW receiver testing.

There are following SRW waveform packages:

- WLAN 802.11a/b/g/n (MV887030A)
- WLAN 802.11ac (MV887031A)
- WLAN 802.11p (MV887032A)
- WLAN 802.11ax (MV887033A)
- WLAN 802.11be (MV887034A)
- *Bluetooth* BR/EDR/LE (MV887040A,
MV887040A-001 (in case of more than 37 bytes payload))
- *Bluetooth* 2LE (MV887040A, MV887040A-002,
MV887040A-001 (in case of more than 37 bytes payload))
- *Bluetooth* LR (MV887040A, MV887040A-003,
MV887040A-001 (in case of more than 37 bytes payload))
- *Bluetooth* LE AoA/AoD (MV887040A, MV887040A-002, MV887040A-004,
MV887040A-001 (in case of more than 37 bytes payload))

Each package contains a selection of waveform files that have been pre-configured at differing standards, data rates, and modulation patterns.

1.2 SRW Receiver Testing

Waveform file selection and transmission to the DUT can be performed in two ways:

- Using Vector Signal Generator (VSG) tool within CombiView. Refer to chapter 2 for details.
- Using remote SCPI commands to directly control the vector signal generator application within the MT8870A module. Refer to chapter 3 for details.

In both cases, the receiver sensitivity of the DUT is calculated using the chipset vendor's host control software to read the number of received packets.

Chapter 2 Using the CombiView VSG Tool

This chapter explains Configuring and Running Receiver Tests, and the calculating the error rate.

2.1	Receiver Testing	2-2
2.2	Configuring and Running Receiver Tests	2-3
2.3	Calculating the Error Rate.....	2-4
2.3.1	Bluetooth Measurements	2-4
2.3.2	WLAN Measurements.....	2-4

2.1 Receiver Testing

CombiView includes the vector signal generator (VSG) to provide receiver testing functionality for the CW, wireless LAN, and *Bluetooth* standards.

To use the VSG you must purchase and register the appropriate MV8870xxA waveform option. The following options are available:

- Option MV887030A: Waveform files for WLAN 802.11b/g/n/a
- Option MV887031A: Waveform files for WLAN 802.11ac
- Option MV887032A: Waveform files for WLAN 802.11p
- Option MV887033A: Waveform files for WLAN 802.11ax
- Option MV887034A: Waveform files for WLAN 802.11be
- Option MV887040A: Waveform files for *Bluetooth*

To use *Bluetooth* Low Energy signal more than 37 bytes payload, you also must purchase the option below:

- Option MV887040A-001: Waveform files for *Bluetooth* LE more than 37 bytes payload

To use *Bluetooth* Low Energy 2 Mbps (2LE) signal, you also must purchase the option below:

- Option MV887040A-002: Waveform files for *Bluetooth* 2LE

To use *Bluetooth* Low Energy Long Range (BLR) signal, you also must purchase the option below:

- Option MV887040A-003: Waveform files for *Bluetooth* LR

To use *Bluetooth* Low Energy AoA/AoD signal, you also must purchase the option below:

- Option MV887040A-004: Waveform files for *Bluetooth* LE AoA/AoD

Each optional package contains a selection of waveform files that have been pre-configured at differing standards, data rates, and modulation patterns.

Note:

A full list of the waveform files provided with each SRW option is provided in chapter 4.

During receiver testing, the Vector Signal Generator tool is used to select a waveform file and to transmit a defined sequence of packets to the DUT receiver.

The receiver sensitivity is calculated using the chipset vendor's software to count the number of frames or packets received in comparison to the number sent.

2.2 Configuring and Running Receiver Tests

1. Within CombiView, at **VSG**, select the port being used to connect to the DUT.
2. Select **VSG > Configure VSG** to open the VSG Settings window shown below.

Figure 2.2-1 VSG Settings

3. At **Sync Mode** select **SISO** unless doing true MIMO testing. Refer to the CombiView Operation Manual for full details.
4. At **Modulation** select **ARB**.
5. At **Waveform File Type**, select the wireless standard.
6. At **Waveform File**, select the waveform to be transmitted.
7. At **Pattern**, set the data pattern.

Note:

Most waveform files for SRW applications contain only one pattern. However files designed for MIMO testing may contain two or more patterns that correspond to the spatial streams comprising the MIMO signal. To transmit this kind of signal you use the same waveform file on each module (spatial stream) and select a different pattern on each module's VSG. For True MIMO receiver testing, the VSGs must be synchronized. See Chapter 10 of the *MX880052A CombiView Short Range Wireless Applet Operation Manual* for details.

8. Set **Frequency** or **Channel**.
9. If required, select **Track VSA**. If selected, changes to the VSG frequency are communicated to the VSA, and changes to the VSA frequency are communicated to the VSG. If cleared, the VSA and VSG frequency settings are independent. Note that the VSA cannot be set to frequencies below 1.9 GHz when no MX887032A license.
10. Set a specific **Number of Packets** to be transmitted or select **Continuous** to play the waveform repeatedly until you click **Stop**.
11. Set the transmission **Power**.
12. Click **Transmit** to start transmission of the waveform to the DUT.

2.3 Calculating the Error Rate

Receiver sensitivity is calculated by using the chipset vendor's software to count the number of packets or bits received in comparison to the number sent.

2.3.1 *Bluetooth* Measurements

The receiver sensitivity for *Bluetooth* basic rate and enhanced data rate signals is based on the calculation of Bit Error Rate (BER). BER is an expression of the number of bits that were received in error and is calculated using the formula below:

$$(1 - (\text{Number of bits correctly received} / \text{Number of bits sent})) \times 100 \%$$

The receiver sensitivity for *Bluetooth* Low Energy signals is based on the calculation of Packet Error Rate (PER). PER is an expression of the number of packets that were received in error and is calculated using the formula below:

$$(1 - (\text{Number of packets correctly received} / \text{Number of packets sent})) \times 100 \%$$

2.3.2 WLAN Measurements

DUT receiver measurements are based on the calculation of Packet Error Rate (PER) or Frame Reception Rate (FRR). PER is an expression of the number of packets that were received in error and is calculated using the formula below:

$$(1 - (\text{Number of packets correctly received} / \text{Number of packets sent})) \times 100 \%$$

FRR is an expression of the number of packets that were successfully received. FRR is specified by the CTIA and Wi-Fi Alliance in the CWG Test Plan used to evaluate the RF Performance of Wi-Fi Mobile Converged Devices. FRR is calculated using the formula below:

$$(\text{Number of packets correctly received} / \text{Number of packets sent}) \times 100 \%$$

Chapter 3 Using Remote Commands

This chapter explains the using SCPI remote commands and calculating the error rate.

3.1	Overview	3-2
3.2	Calculating the Error Rate.....	3-3
3.2.1	<i>Bluetooth</i> Measurements	3-3
3.2.2	WLAN Measurements.....	3-3

3.1 Overview

Receiver tests can be performed using remote SCPI commands to control the vector signal generator application within the MT8870A module.

The example below shows how to select a *Bluetooth* waveform file (provided with MV887040A) and output it from port 1 at –70 dBm on a frequency of 2402 MHz.

Note:

Further details on the vector signal generator application and the modes of operation can be found in the *MU887000A TRX Test Module Operation Manual*.

1. Set the VSG operation mode to “normal” for use with remote commands.
:SOURce:GPRF:GENerator:MODE NORmal
2. Set the frequency to 2402 MHz.
:SOURce:GPRF:GENerator:RFSetting:FREQuency 2402MHz
3. Set the level to –70 dBm.
:SOURce:GPRF:GENerator:RFSettings:LEVel -70
4. Turn on modulation.
:SOURce:GPRF:GENerator:BBMode ARB
5. Load the waveform file to memory.
:SOURce:GPRF:GENerator:ARB:FILE:LOAD "MV887040A_DH3_3SlotOff"
6. Select port 1 as the output port.
:ROUte:PORT:CONNect:DIRection PORT2, PORT1
7. Turn on signal output.
:SOURce:GPRF:GENerator:STATe ON
8. Check that the output level is within acceptable limits.
:SOURce:GPRF:GENerator:RFSettings:LEVel:SETTing?
9. Stop the signal output.
:SOURce:GPRF:GENerator:STATe OFF

Note:

Refer to the *MU887000A TRX Test Module Operation Manual* and *MX880054A Signal Generator Application Applet Operation Manual* for further information about controlling the VSG application.

3.2 Calculating the Error Rate

Receiver sensitivity is calculated by using the chipset vendor's software to count the number of packets or bits received in comparison to the number sent.

3.2.1 Bluetooth Measurements

The receiver sensitivity for *Bluetooth* basic rate and enhanced data rate signals is based on the calculation of Bit Error Rate (BER). BER is an expression of the number of bits that were received in error and is calculated using the formula below:

$$(1 - (\text{Number of bits correctly received} / \text{Number of bits sent})) \times 100 \%$$

The receiver sensitivity for *Bluetooth* Low Energy signals is based on the calculation of Packet Error Rate (PER). PER is an expression of the number of packets that were received in error and is calculated using the formula below:

$$(1 - (\text{Number of packets correctly received} / \text{Number of packets sent})) \times 100 \%$$

3.2.2 WLAN Measurements

DUT receiver measurements are based on the calculation of Packet Error Rate (PER) or Frame Reception Rate (FRR). PER is an expression of the number of packets that were received in error and is calculated using the formula below:

$$(1 - (\text{Number of packets correctly received} / \text{Number of packets sent})) \times 100 \%$$

FRR is an expression of the number of packets that were successfully received. FRR is specified by the CTIA and Wi-Fi Alliance in the CWG Test Plan used to evaluate the RF Performance of Wi-Fi Mobile Converged Devices. FRR is calculated using the formula below:

$$(\text{Number of packets correctly received} / \text{Number of packets sent}) \times 100 \%$$

Chapter 4 Waveform Files

*: MU (non-OFDMA), 800 ns GI, 2x EHT-LTF.

4.6 WLAN Packet Definition

Idle time before rising edge (μ s): 0

Idle time after falling edge (μ s): 30*

3 MAC addresses: ff:ff:ff:ff:ff:ff

20:22:22:22:22:02

50:55:55:55:55:05

Payload type: PN9

Scrambled: yes

b Filter type: Gaussian BT = 0.5

n PPDU format: mixed

Broadcast: yes

*: For all the WLAN waveforms in Table 4.1.1-1 through Table 4.5.1-1, the idle time is 30 (μ s).

4.7 Bluetooth Waveform Patterns (MV887040A)

Notes:

- All *Bluetooth* waveforms are prefixed with MV887040A.
- Waveforms ending in “_Q” are customer-variant files.

4.7.1 Bluetooth

Table 4.6.1-1 Bluetooth Waveforms

Waveform	Data rate (Mbps)	Modulation	Filter	Packet type
DH1* ¹	1	GFSK* ⁴	Gaussian* ⁵	DH1
DH3* ¹	1	GFSK* ⁴	Gaussian* ⁵	DH3
DH5* ¹	1	GFSK* ⁴	Gaussian* ⁵	DH5
2-DH1* ¹	2	$\pi/4$ -DQPSK	Root Nyquist* ⁶	2-DH1
2-DH3* ¹	2	$\pi/4$ -DQPSK	Root Nyquist* ⁶	2-DH3
2-DH5* ¹	2	$\pi/4$ -DQPSK	Root Nyquist* ⁶	2-DH5
3-DH1* ¹	3	8-DPSK	Root Nyquist* ⁶	3-DH1
3-DH3* ¹	3	8-DPSK	Root Nyquist* ⁶	3-DH3
3-DH5* ¹	3	8-DPSK	Root Nyquist* ⁶	3-DH5
GFSK-PN15* ³	1	GFSK* ⁴	Gaussian* ⁵	No packet format
PI_4_DQPSK- PN15* ³	2	$\pi/4$ -DQPSK	Root Nyquist* ⁶	No packet format
8DPSK-PN15* ³	3	8DPSK	Root Nyquist* ⁶	No packet format
BLE* ¹	1	GFSK* ⁹	Gaussian* ⁵	BLE Reference Signal
BLE_CRC_corrupted* ⁷	1	GFSK* ⁹	Gaussian* ⁵	BLE Reference Signal
BLE_CRC_corrupted_255* ¹³	2	GFSK* ⁹	Gaussian* ⁵	BLE Payload 255 bytes
BLE_255* ¹⁰	1	GFSK* ⁹	Gaussian* ⁵	BLE Payload 255 bytes

2LE_AoD2_255* ^{10,*11,*17}	2	GFSK* ⁹	Gaussian* ⁵	2LE AoD with 1 μ s slots Payload 255 bytes* ¹⁸

*1: PN9 data is inserted into the payload body.

*2: PN9 data is inserted to all areas that do not have a packet format.

- *3: PN15 data is inserted to all areas that do not have a packet format.
- *4: Modulation index = 0.32
- *5: Bandwidth time (BT) = 0.5
- *6: Roll-off rate β = 0.4
- *7: Use in RF-PHY.TS/4.0.0 RCV-LE/CA/07-C (PER Report Integrity)
with intentional CRC errors in every other packet is assumed.
- *8: Not used.
- *9: Modulation index = 0.5
- *10: MV887040A-001 is needed.
- *11: MV887040A-002 is needed.
- *12: MV887040A-003 is needed.
- *13: Use in RF-PHY.TS/5.0.1 RCV-LE/CA/BV-07-C
[PER Report Integrity, uncoded data at 1Ms/s] with intentional.
- *14: Use in RF-PHY.TS/5.0.1 RCV-LE/CA/BV-13-C
[PER Report Integrity at 2Ms/s] with intentional.
- *15: Use in RF-PHY.TS/5.0.1 RCV-LE/CA/BV-30-C
[PER Report Integrity, LE Coded (S=2)] with intentional.
- *16: Use in RF-PHY.TS/5.0.1 RCV-LE/CA/BV-31-C
[PER Report Integrity, LE Coded (S=8)] with intentional.
- *17: MV887040A-004 is needed.
- *18: CTE Time = 20

4.8 **Bluetooth Packet Definition**

Am_addr:	7 (standard waveforms), 0 (Q waveforms)
Flow:	1
Arqn:	0
Seqn:	0
Uap:	0x6b
Lap:	0xc6967e
Logical channel:	0
Logical flow:	0

4.9 Zero Waveform Patterns

Note:

The zero waveform is included in all of the SRW waveform packages.

4.9.1 Zero

Table 4.8.1-1 Zero Waveforms

Waveform	Output	Pattern Length
ZERO_200000000Hz_100000p	No signal	500 μ s

Appendix A Specifications

This appendix describes the specifications.

(Nominal): Nominal indicates the design value and is not guaranteed.

A.1 MV887030A

Name

WLAN 802.11b/g/a/n waveforms

Structure

The items below are provided on the product DVD etc. The waveform files are also preinstalled on the MU887000A TRX Test Module.

WLAN 802.11b/g/a/n Waveforms files: 56

WLAN 802.11b/g/a/n Waveforms license files: 1

Operation Manual: 1

EVM

802.11b

Packet Length: 1024 byte
Frequency: 2402 to 2484 MHz
Gaussian filter: BT 0.5
EVM: ≤ -38 dB rms

802.11g

Packet Length: 1000 byte
Frequency: 2402 to 2484 MHz
Operating temperature: 20 to 30 °C
EVM: ≤ -40 dB rms

802.11a

Packet Length: 1000 byte
Frequency: 4920 to 5825 MHz
Operating temperature: 20 to 30 °C
EVM: ≤ -38 dB rms

802.11n (2402 to 2484 MHz)

Packet Length: 4096 byte
Guard Interval: Long
Channel bandwidth: 40 MHz
Operating temperature: 20 to 30 °C
EVM: ≤ -40 dB rms

802.11n (4920 to 5825 MHz)

Packet Length: 4096 byte
Guard Interval: Long
Channel bandwidth: 40 MHz
Operating temperature: 20 to 30 °C
EVM: ≤ -38 dB rms

A.2 MV887031A

Name

WLAN 802.11ac waveforms

Structure

The items below are provided on the product DVD etc. The waveform files are also preinstalled on the MU887000A TRX Test Module.

WLAN 802.11ac Waveforms files:	65
WLAN 802.11ac Waveforms license files:	1
Operation Manual:	1

A.3 MV887032A

Name

WLAN 802.11p waveforms

Structure

The items below are provided on the product DVD etc. The waveform files are also preinstalled on the MU887000A TRX Test Module.

WLAN 802.11p Waveforms files:	25
WLAN 802.11p Waveforms license files:	1
Operation Manual:	1

A.4 MV887033A

Name

WLAN 802.11ax waveforms

Structure

The items below are provided on the product DVD etc. The waveform files are also pre-installed on the MU887000A TRX Test Module.

WLAN 802.11ax Waveforms files: 50
 WLAN 802.11ax Waveforms license files: 1
 Operation Manual: 1

Maximum Output Level

MU887000A:

–10 dBm (Test Port 1/2, 2412 MHz ≤ Frequency ≤ 2484 MHz)
 –18 dBm (Test Port 1/2, 4920 MHz ≤ Frequency ≤ 5825 MHz)
 0 dBm (Test Port 3/4, 2412 MHz ≤ Frequency ≤ 2484 MHz)
 –8 dBm (Test Port 3/4, 4920 MHz ≤ Frequency ≤ 5825 MHz)

MU887001A:

–10 dBm (Test Port 1/2/3/4, 2412 MHz ≤ Frequency ≤ 2484 MHz)
 –18 dBm (Test Port 1/2/3/4, 4920 MHz ≤ Frequency ≤ 5825 MHz)

MU887002A:

–5 dBm (TRX1/2 Test Port 1 to 12, 2412 MHz ≤ Frequency ≤ 2484 MHz)
 –8 dBm (TRX1/2 Test Port 1 to 12, 4920 MHz ≤ Frequency ≤ 5825 MHz)
 –10 dBm (With MU887002A-007, TRX1/2 Test Port 5 to 12,
 5900 MHz ≤ Frequency ≤ 7215 MHz, and Channel Edge ≤ 7215 MHz)

EVM

Packet Length 4096 byte, Guard Interval 0.8 μs, Channel Bandwidth 80 MHz,
 Average of 20 Packets, 20 to 30 °C

MU887002A:

≤ –43 dB (Nominal) (With MU887002A-007, TRX1/2 Test Port 5 to 12,
 5900 MHz ≤ Frequency ≤ 7175 MHz)

A.5 MV887034A

Name

WLAN 802.11be waveforms

Structure

The items below are provided on the product DVD etc. The waveform files are also pre-installed on the MU887002A TRX Test Module.

WLAN 802.11be Waveforms files:	56
WLAN 802.11be Waveforms license files:	1
Operation Manual:	1

Maximum Output Level

MU887002A:

-5 dBm	(TRX1/2 Test Port 1 to 12, $2412\text{ MHz} \leq \text{Frequency} \leq 2484\text{ MHz}$)
-8 dBm	(TRX1/2 Test Port 1 to 12, $4920\text{ MHz} \leq \text{Frequency} \leq 5825\text{ MHz}$)
-10 dBm	(With MU887002A-007, TRX1/2 Test Port 5 to 12, $5900\text{ MHz} \leq \text{Frequency} \leq 7215\text{ MHz}$, and Channel Edge $\leq 7215\text{ MHz}$)

EVM

Packet Length 4096 byte, Guard Interval 0.8 μs , Channel Bandwidth 80 MHz,
Average of 20 Packets, 20 to 30 °C

MU887002A:

$\leq -43\text{ dB (Nominal)}$	(With MU887002A-007, TRX1/2 Test Port 5 to 12, $5900\text{ MHz} \leq \text{Frequency} \leq 7175\text{ MHz}$)
--------------------------------	--

A.6 MV887040A

Name

Bluetooth waveforms

Structure

The items below are provided on the product DVD etc. The waveform files are also pre-installed on the MU887000A TRX Test Module.

Bluetooth waveforms files: 52
(including two files for MV887040A-001, four files for MV887040A-002,
eight files for MV887040A-003, and twelve files for MV887040A-004)

Bluetooth waveforms license files: 1

Operation Manual: 1

Deviation

Frequency: 2402 to 2480 MHz

Modulation: GFSK

Deviation: 1 % ($\pm 0.01 \times$ deviation Hz) (Nominal)

DEVM

Frequency: 2402 to 2480 MHz

Modulation: $\pi/4$ -DQPSK or 8-DPSK

DEVM: < 5 % rms
