Creating a Sustainable Future Together

In April 2021, Anritsu formulated its new Company Vision and Company Policy toward 2030.

Our Sustainability Policy was revised at the same time. We take on the challenges of creating a sustainable society together with our stakeholders through the actions of every employee under the philosophy, vision, and policy.

Sustainability Policy

The Anritsu Group aims to increase our long-term corporate value through contributing to building a sustainable future of the global society with "Sincerity, Harmony, and Enthusiasm."

- 1 We will contribute to building a safe, secure, and prosperous global society through our business activities, based on our long-term vision.
- 2 We will take the initiative in solving environmental issues, such as climate change, to contribute to building a people- and planet- friendly future.
- 3 We will respect the human rights of all people and strive to create a workplace offering healthy lives and decent work for all where diverse individuals can grow together.
- 4 We will operate as a business with high corporate responsibility, peaceful, just, and ethics while maintaining business transparency to meet our social obligations.
- **5** We will promote communications with stakeholders to develop strong partnerships and meet the challenges of solving social issues.

Revision April 2021

CONTENTS

¹¹ Solving Social Issues Through Business

Who We Are

Development, Manufacturing, Technology, and Service Centers around the World

Who We Are

We Founded in the Meiji Era

Anritsu was first founded in 1895 as Sekisan-sha. After many twists and turns, Kyoritsu Electric and Annaka Electric merged in 1931 to form Anritsu Electric Co., Ltd., which ultimately became the current Anritsu Corporation in 1985.

Since its foundation, Anritsu has been leading the way as a pioneer in information communications equipment, contributing to the evolution and development of communications technologies. Anritsu has since expanded its business to include test and measurement instruments and quality assurance inspection equipment for food products and currently operates four primary businesses: Test and Measurement, PQA, Environmental Measurement, and Sensing and Devices. Anritsu also actively engages in ESG to help resolve social

issues.

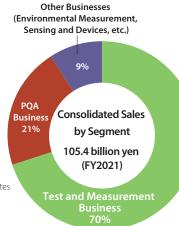

Test and Measurement Business

We contribute in partnership with our customers around the world to bringing greater convenience and comfort to society by providing test and measurement solutions that support the realization of a 5G and IoT society.

POA Business

We offer solutions that address a wide variety of issues and problems our customers face at their manufacturing sites to ensure the safety and security of food products and pharmaceuticals.

Environmental Measurement Business

We contribute to the realization of a sustainable society by providing environmental measurement solutions that help maintain social infrastructure and the creation of a decarbonized society.

Sensing and Devices **Business**

We supply high-quality custom products that meet the needs of our customers throughout the world based on our cutting-edge devices and sensing technologies.

Advanced automotive safety

Eliminating information disparities

History of Our Contributions to Solving Social Issues

Practical application of telecommunications

- 1908: Mass production of common-battery telephones, which later became public telephones
- 1914: Pioneered in realizing the practical use of wireless telephones
- 1924: Manufactured Japan's first radio receiver for radio broadcasting
- 1933: Manufactured Japan's first TV broadcast transmitter

Development of communications infrastructure and mass production of food products

- 1950: Development and manufacturing of various measuring instruments for TV broadcasting
- 1956: Development and manufacturing of public
- 1964: Development and manufacturing of automatic check weigher for food products

High-speed optical and digital communications and food safety and security

- 1981: Development and manufacturing of food metal detector and the industry's first Optical Time Domain Reflectometer
- 2000: Development and manufacturing of measuring instruments for high-speed data communications and a food X-ray detector

Evolution and development of mobile communications

- 2001: Development and manufacturing of the industry's first measuring instruments for 3G devices
- 2010: Development and manufacturing of the industry's first measuring instruments for 4G devices
- 2018: Development and manufacturing of the industry's first measuring instruments for 5G devices

Ensuring food safety and security

food loss

Our Commitment to the Goals

We intend to foster a safe, secure, and prosperous global society by "solving social issues through business" and taking on "challenges to meet the needs of society (ESG)," the two pillars of

our sustainability management.

Preventing and mitigating natural disasters

> Achieving carbon neutrality

> > Alleviating labor shortages

History of Our ESG Initiatives

- 1962: Construction of a wastewater treatment facility
- 1968: Listing on the First Section of the Tokyo Stock Exchange
- 1994: Organization of the Product Assessment Committee
- 1995: Establishment of the Anritsu Group Code of Conduct 1997: Establishment of Anritsu's environmental policy
- 1998: Acquisition of ISO 14001 certification (Atsugi Site)
- 1999: Establishment of the Anritsu Green Procurement Guidelines for product development
- 2000: Establishment of the Recycling Center Establishment of the Anritsu Eco-Product system Publication of the Environmental Report Adoption of the executive officer system

- 2001: Establishment of the IR Department
- 2004: Establishment of the CSR Promotion Department
- 2005: Invitation issued to one outside director (additional invitations in 2010, 2011, and 2021)
 - Publication of the CSR Report
- Establishment of the Anritsu Group Charter of Corporate Behavior
- 2006: Support for the UN Global Compact
- 2010: Establishment of the Anritsu CSR Procurement Guidelines
- 2013: Construction of the second Koriyama plant and start of solar power
- 2015: Transition to the structure of a company with an Audit & Supervisory Committee
 - Construction of a global headquarters office and start of solar power generation

- 2018: Establishment of the Sustainability Policy (revised in 2021) Establishment of the Sustainability Promotion Center Transitioned from the CSR Report to the Sustainability Report
- 2019: Acquisition of SBT certification for a CO₂ reduction plan
- 2020: Commencement of Anritsu Climate Change Action PGRE 30* to work on the private generation of renewable energy. Commencement of solar power generation at Anritsu Company
- 2021: Establishment of Hapi Sma Co., Ltd. (certified as a special subsidiary)

*PGRE stands for "private generation of renewable energy," and "30" represents the target ratio of about 30% and the approximate target year 2030 for achieving the goal.

Group CEO Message

Working toward a Sustainable Future Together with Our Two Pillars of Business and ESG Initiatives

Hirokazu Hamada

Representative Director, President of Anritsu, Group CEO

The Anritsu Group intends to contribute to creating a better future for society through sustainability management. Working together with our stakeholders, we will contribute to the development of a safe, secure, and prosperous global society by focusing on our two pillars of sustainability management: solving social issues through business and taking on challenges to meet the needs of society (ESG).

Being a Company that Is Necessary for and Useful to Society

A series of global challenges such as COVID-19 and the Ukraine crisis have been threatening the sustainability of society and reshaping it by undermining the very foundations of the SDGs, which are to be achieved by 2030. Despite these circumstances, we have set

up a structure in which I myself will serve as chief sustainability and environment officer starting in April 2022 to promote efforts to resolve social issues to which Anritsu can contribute. Under our Company Philosophy of "sincerity, harmony, and enthusiasm," we will continue to implement our Sustainability Policy and contribute to the realization of a safe, secure, and prosperous global society as a company necessary for and useful to society in creating a better future.

Sincerely Addressing the Needs of Society

Recognizing that addressing ESG issues will minimize adverse effects on the environment and society and lead to a future that facilitates the full and active participation of everyone throughout every aspect of life, we set sustainability targets in our GLP2023 Mid-

Term Business Plan, formulated in 2021.

One of our highest priority ESG activities is addressing climate change. Anritsu is undertaking activities that directly lead to reducing power consumption through the Anritsu Climate Change Action PGRE 30, an initiative for generating private renewable energy for our consumption. We will continue these efforts to increase the generation of renewable energy while regarding this as the Company's own responsibility. PGRE 30 calls for private solar power generation at major sites, and the ratio of private power generated in FY2021 was 16.8%, exceeding the GLP2023 target of at least 13%. However, given that climate change continues to progress every day, we will further strengthen our efforts and formulate a plan to raise our SBT-certified CO₂ emission reduction targets to achieve carbon neutrality by 2050. Although the annual electricity consumption of the Anritsu Group (about 30 GWh) is not large enough to meet the requirements for participation in RE100, we will join other frameworks that promote the realization of carbon neutrality.

As for the social aspect of sustainability, our targets encompass the diversity of human resources and respect for human rights throughout our supply chain. We plan to achieve a ratio of women in managerial positions of at least 15% on a global basis by promoting diversity and inclusion. To increase the number of female managers, we are hiring more new graduates and mid-career workers, focusing on women in technical fields, and enhancing systems that allow flexible work arrangements. We are also focusing on raising awareness among male employees and creating a corporate culture that encourages them to confidently take childcare leave. Diversity unlocks innovation and drives business

growth. In the future, we hope to be a company that has human resources representing a variety of values, ideas, and experiences, regardless of gender and nationality, and who are capable of playing a central role in decision-making. We will promote health and productivity management that enables our employees to work in a safe, healthy, and vibrant manner and to demonstrate their unique strengths and abilities.

We look to the level of achievement of sustainability targets as an indicator for calculating bonuses for officers. This confirms my strong commitment to ensuring sustainability, which must be pursued not only by departments closely related to sustainability, such as the Human Resources and Environment Departments, but by all officers in their respective areas of responsibility.

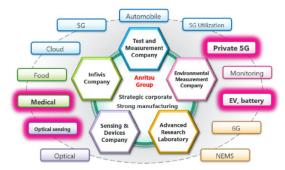

Expanding the Areas in which We Contribute to Solving Social Issues through Our Business

The technology of testing, a major competency of Anritsu, lies at the core of our business efforts. The evolution of information and communications systems has always brought about social innovation, prosperity, and development. During the COVID-19 pandemic as well, information and communications networks have been connecting people to each other. During the state of emergency, up to 80% of our employees engaged in telework, which effectively reduced the number of face-to-face interactions, thereby preventing the spread of infection.

Anritsu's test and measurement solutions help to ensure the quality of connectivity in the development, manufacturing, and maintenance of smartphones, communications terminals, and data centers, and supporting the evolution and development of information and communications systems. We are also expanding our technology of testing into food production. We offer solutions to customers in the food industry that help prevent foreign body contamination while supporting the automation and management of production without excess or shortage of raw materials, thereby contributing to the effective use of food resources, safe and secure food distribution, and reduced food loss.

Our effort to support the evolution of IT systems and protect the safety and security of people's lives will continue to be at the core of Anritsu's operations. In addition, we have established new areas of contribution, including Private 5G (referred to as "Local 5G" in Japan), EVs and batteries, optical sensing, and medical and pharmaceuticals.

Focus on developing four new areas

EVs and batteries is a particularly new business area for Anritsu and the first business in which we can directly contribute to solving social issues related to the environment through our business. To enter this business, we acquired TAKASAGO Ltd. through M&A in January 2022 and made it one of our newest Group companies. The company provides testing equipment to support the research and development of EVs with improved performance and energy efficiency. We intend to significantly grow this business as a major contributor to the realization of a carbon-neutral society.

Incorporating related goals of SDGs into Business and ESG Initiatives to Engage All Employees

The Anritsu Group as a whole is committed to contributing to the SDG No. 9 and aims to "secure infrastructure which leads to the building of a sustainable society and encourages innovation." In addition, each of our business units, corporate divisions, and Group companies are undertaking initiatives under GLP2023 by drawing up a vision of the future society that they aspire to from their own perspectives and formulating plans incorporating the SDGs to realize this vision. The Sustainability Promotion Committee, comprised of business divisions, corporate divisions, and Group companies, reviews the progress of each initiative and implements PDCA cycles. Under the supervision of the Management Strategy Committee and Board of Directors, we will ensure that the progress of these initiatives lead to enhanced corporate value in line with our Sustainability Policy.

The Vision for a Digital Garden City Nation, launched by the Japanese government, is linked to many of the SDGs and will enable people in rural areas to work and live the same way as those in large cities, by making administrative procedures, education, and medical care available online and promoting the automated driving of automobiles. One essential component of the initiative is digital transformation (DX), which will be realized through 5G and cloud computing. Since the dawn of optical, digital, and mobile communications, Anritsu has been providing telecommunications carriers, manufacturers, and related customers around the world with measuring instruments for testing the standardized operation and connectivity of terminals and devices as well as devices that are integrated into telecommunications systems. Measurement technology is a vital part of further technological innovation in 5G and 6G, an area where Anritsu can significantly contribute to the creation of a better future society, so keep your eyes on our progress.

SDGs in the Test and Measurement Business

In the future society, technological innovations such as DX are expected to support industries and everyday life. These innovations will be supported by advanced communications networks. Anritsu's Test and Measurement Business contributes to achieving Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation and Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable, in partnership with customers by providing reliable communication test solutions to support development and ensure the quality of the communications network.

Q: How will technological innovations shape the communities of the future

A: In the communities of the future, a variety of social issues will be solved by DX and people will be able to lead more comfortable, prosperous lives. For instance, we will be able to use autonomous driving and telemedicine, which leverages 5G's ultra-low latency characteristics.

Q: How is Anritsu helping to develop the communities of the future?

A: The infrastructure for future communities will incorporate securely connected advanced communications networks. The quality of communications will be ensured by using reliable communication test solutions.

Anritsu provides test solutions to ensure the quality of communications required for the development, manufacturing, and maintenance of smartphones and base stations. Telecommunications operators taking advantage of Anritsu's support will be able to construct resilient communications networks with highly reliable connectivity. This will also lead to better traffic safety. These efforts will contribute to achieving Targets 9.1 and 11.2 of the SDGs.

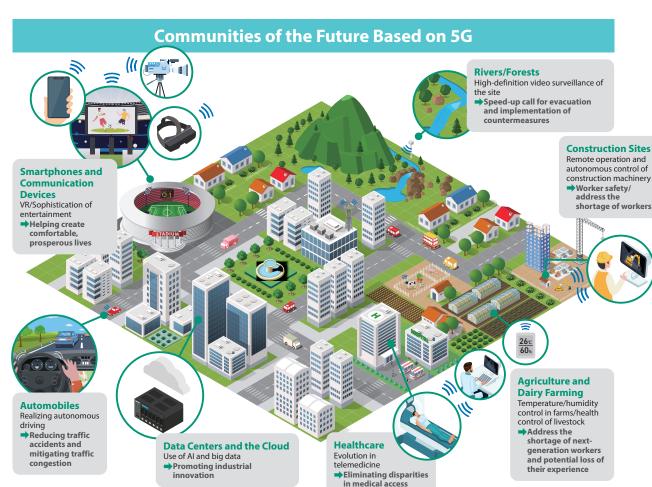

Q: Please elaborate on the roles played by your test solutions.

A: Communications terminals and equipment must be verified to have been manufactured in accordance with global mobile telecommunications specifications. Our measuring instruments, which serve as testing solutions, make invisible electrical waves visible. They also perform the functions of base stations in verifying that terminals and equipment operate in accordance with the latest communications specifications. Terminals and equipment verified by our measuring instruments will help to create safe, secure, and prosperous communities, as shown in the illustration on the right.

I see. That's how Anritsu is helping to achieve Goals 9 and 11 of the SDGs

SDGs in the Sensing and Devices Business

SDGs in the PQA Business

Every year, 1.3 billion tonnes of food are lost around the world. Reducing this loss has become a key challenge for realizing a sustainable society. While the principal causes of food loss are leftovers and reaching the expiration date, some of the loss can be avoided by improving the quality of production. The PQA Business is focusing its quality assurance solutions on achieving Target 12.3 of the SDGs: By 2030, halve per capita global food waste at the retail and consumer levels and reduce food losses along production and supply chains, including post-harvest losses.

A: "Food loss" refers to food that has been thrown away even though it was still edible. Before ingredients are processed in factories and consumed at home, a huge volume of food is discarded as waste. This has become a major social issue. The SDGs calls for cutting food loss in half, and the international community is working together to achieve this target.

The example of Japan

Of which is food loss

Major Reason for

Food waste

About 50,000 business

13.39 million t

1.21 million t

Retail/wholesale

Food service

Consumers

A: The fact that many people in the world cannot afford to eat well at the same time that resources are not being used effectively is a serious problem. Food resources are limited, so it is important to ensure that food delivered to consumers can be preserved for a long time and is safe and satisfying to eat.

A: When processed food is found to be defective products after having been shipped from the factory and distributed in the market, a large volume of food must be recalled and discarded. Anritsu helps to reduce food loss by providing inspection equipment to food manufacturers to prevent the shipment of defective products to the market.

Q: Could you please elaborate on this?

A: Quality defects can occur in any process. Anritsu's quality assurance solutions encompass the entire manufacturing process. For example, we cannot only find defects that are smaller than ever before, but also eliminate only defective areas, identify package defects, and so on. We also offer solutions that can reduce the risk of producing defective products or identifying lots that have defective products by monitoring quality data.

Examples of Our Contributions to Food Loss Reduction

manufacturing 👝 industry

industries

Discarded due to poor quality | Expiration date/"best by" date

About 820,000 business

0.81 million t

Unsold / Leftovers

Too much edible food being

removed Leftovers food loss *"Food waste" refers to foods that are still edible as well as parts of foods such as the bones of meats and fish that are separated out in the course of food processing and are not edible. The food waste and food loss figures are estimates in fiscal 2020 and were published by the Ministry of Agriculture, Forestry and Fisheries of Japan.

About 1.000.000 business

1.34 million t

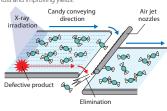

0.73 million t

Reducing poor quality Minimizing scope of recalls Contributing to safe and reliable diets

Anritsu's Quality Assurance Solutions

Pinpoint sorting to improve yield

Defective products are meticulously identified and blown away by the many air iet nozzles placed perpendicular to the direction of flow at the end of the inspection machine conveyor. The pinpoint function is extremely precise, leaving non-defective products untouched and thus minimizing food loss and improving yields.

Preventing the shipment of defective packages

Defective packages cause sealing and anti-moisture properties to deteriorate, leading to alteration (degradation) and spoilage of the contents. Eliminating defects prevents quality degradation after shipment which can lead to food loss.

Defective part of a

Quick response by analyzing inspection images

All inspection image data of produced food products can be stored. This makes it possible to promptly analyze the details of any potential foreign material contamination after production or any customer complaint of foreign material contamination

SDGs in the Sensing and Devices Business

To establish a resilient social infrastructure, we provide highly reliable information and communications solutions that utilize technologies for remote monitoring, image information, and communication bandwidth control. We also support the introduction and operation of Private 5G and process improvement using measurement solutions to facilitate the transformation into a new digital society. Furthermore, we contribute to the realization of a safe, secure, and pleasant carbon-neutral society by providing EV (electric vehicle) and battery evaluation solutions.

Providing Environmental Measurement Solutions that Contribute to a Safe, Secure, and **Environmentally Friendly Society**

Social Issues and **Customer Needs**

Anticipating the next social transformation through digital innovation.

Social Issues

- Dramatic rise in traffic due to increased telecommuting and online education
- Increase in natural disasters such as torrential rains and earthquakes
- Transition to a de-carbonized society

Customer Needs and Interests

- Easily dealing with communication failures in a company (late transmission, disconnection)
- Accurately grasping the state of a monitoring site with visual images in real time
- Development of energy-efficient EVs

Roads, rivers, communications, water, electricity, and finance

Advances in infrastructure monitoring operations and ensuring the safety of aging infrastructure Disaster prevention/mitigation and smart city implementation

Remote monitoring system

nage information system

Bandwidth controlle

Selling highly reliable information and communications equipment and solutions, and EV and battery measurement solutions

Factories and construction

Introduction and operation of Private 5G Labor saving and productivity improvement of production facilities

Customers

Services to support Private 5G introduction

Industrial measurement equipment (shape, heat, sound, vibration, etc.)

Strengths

Provision of solutions that integrate advanced proprietary

Ability to accurately identify customer issues and provide effective solutions

Anritsu

Promotion of Carbon Neutrality

Automobiles and motorcycles, construction machinery, agricultural machinery, and ships

Increased use of EVs and batteries Expanded use of renewable energy

EV powertrain

Bi-directional DC power testing

Future Society

Creating a communications environment that ensures stress-free. comfortable connectivity anywhere, anytime

Realizing a society in which measures to prevent and mitigate natural disasters have advanced and everyone can live securely

Realization of Earth-friendly and green transportation systems through the spread of highly reliable EVs

SDGs in the Test and Measurement Business

Anritsu's Environmental Measurement Business intends to achieve Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation; Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable; Goal 13: Take urgent action to combat climate change and its impacts; and Goal 7: Ensure access to affordable, reliable, sustainable and modern energy for all, in partnership with customers by providing initiatives and solutions that contribute to improving the resilience of social infrastructure, improving productivity through industrial digitalization, and carbon neutrality, all indispensable for creating a sustainable society.

Q: Please tell us about the social infrastructure monitoring necessary to make cities and human settlements inclusive, safe, resilient, and sustainable.

A: Our lives are built on various types of social infrastructure, including roads, rivers, communications, water supply, and electric power, which need to be properly operated and maintained. Given the increased frequency and severity of natural disasters associated with climate change, measures to prevent or mitigate natural disasters are also necessary. Social infrastructure is constantly monitored for these efforts and measures, and Anritsu provides the necessary products and solutions for this monitoring.

Q: So, Anritsu hopes to solve social issues by contributing to the SDGs together with its customers, rather than simply trying to solve them on its own?

A: Yes, that's right. We are contributing to Goals 11 and 13 by offering monitoring solutions that apply IoT technologies and contribute to disaster prevention and mitigation to customers who manage infrastructure.

Q: Please tell us about these monitoring solutions.

A: To ensure that aging facilities and natural disasters can be promptly and effectively addressed, efficient and accurate assessment of the situation is required to determine priorities. Anritsu provides unique distributed remote monitoring devices that collect the necessary information for this purpose by applying IoT technologies, information browsing devices that efficiently keep track of increasing amounts of footage and data, centralized monitoring solutions built with these devices, and bandwidth control devices that can ensure the stability of critical communications.

Q: What do you mean by distributed remote monitoring?

A: Our distributed remote monitoring devices can be connected to a wide range of equipment to meet the demand for easily monitoring the status of various social infrastructure facilities. We also use edge computing technology to offset the load from the network and central processing unit. This allows, for example, real-time monitoring of the status of warning signs, traffic signals, and emergency alert devices in tunnels, to support safe driving.

Social Issues and **Customer Needs**

Anticipating the next social transformation through digital transformation

Social Issues

- Building a robust communications infrastructure that handles increased data traffic
- Increased number of patients with eye diseases due to the aging population

Customer Needs and Interests

- Secured quality of optical signals transmitted through optical fiber that constitutes part of the communications infrastructure
- Development of a high-resolution retinal examination device

Anritsu contributes to realizing a safe, secure, and comfortable society by improving convenience in our lives together with customers through the provision of optical devices that constitute core components of industrial products and Ultrafast electron devices across the world.

Providing Core Devices to Make Living in Society More Comfortable

Anritsu's SOA-equipped optical transceiver enables longdistance communication between data centers without degradation of optical signals. New product of chip carrier type SOA smaller than module type assists miniaturization of optical transceivers.

Incorporating Anritsu's SLD light sources into ophthalmic OCT systems allows for high-resolution retinal examination, leading to the early detection of age-related macular degeneration and glaucoma.

SDGs in the Sensing and Devices Business

Ultra-high-speed optical digital communications networks, together with wireless access networks such as 5G, are accelerating digital innovation and serving as the foundation for solving social issues in various industrial fields, including the environment, medicine, agriculture, automobiles, and disaster prevention. Anritsu's Sensing and Devices Business contributes to achieving Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation, and Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable, in partnership with customers by supplying optical devices and ultra-high-speed electronic devices that are the key to various industrial products for customers around the world.

Q: In what areas are Anritsu's devices being utilized and contributing to the SDGs? Please share the best-known examples.

A: In long-distance optical communications networks that connects the world, it is necessary to intensity, or amplify, optical signals that gradually decrease intensity during transmission. Anritsu provides light sources, namely pump lasers, which are vital for communication network amplifiers, and semiconductor optical amplifiers (SOA), which are equipped optical transceivers in data centers. A stable communication environment is an essential part of Goals 9 and 11, so we are contributing to the SDGs by supporting these environments in partnership with our customers.

We are also contributing to Goal 13, as it leads to the reduction of CO² emissions.

Q: Can you provide some details about that?

A: More and more data centers are being built due to the increase in data traffic. Our SOAs that amplify optical signals allow large-scale data centers to be constructed at a distance, thereby reducing the need for additional data ones between them, and this in turn reduces power consumption and therefore CO2 emissions as well. We are also developing SOAs that can be supplied in a chip carrier type instead of a module and that function at high temperatures to help our customers downsize their products and reduce the power consumption required to cool them.

We have supplied quite a large quantity of pumping lasers, which are being used around the world in numerous applications. While the power consumption of each individual unit may seem small, it can be enormous when taken as a whole, so it is important to save power.

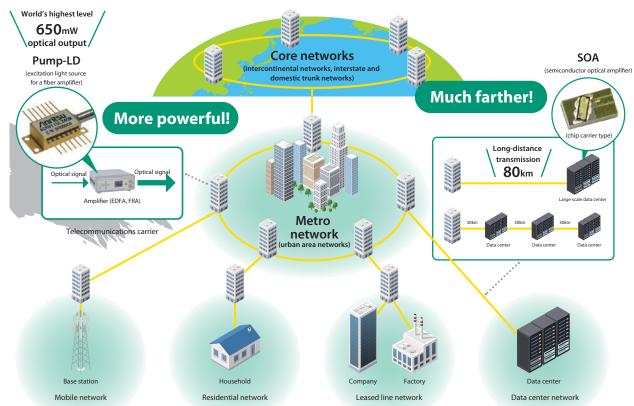

Q: Have you set any numerical targets for power saving?

A: Our goal is to reduce power consumption by 5% by fiscal 2023 compared to fiscal 2020, and we are promoting power saving initiatives to achieve this.

Q: I see—Anritsu is helping to solve social issues by contributing to the stable operation of optical communications networks and power saving.

Partnerships that Contribute to the Spread of Private 5G

Establishment of AK Radio Design

Anritsu has established a joint venture, AK Radio Design with the Structural Planning Research Institute, Inc. The company provides services that integrate simulated and actual measurements to address a variety of issues related to the introduction and operation of Private 5G. AK Radio Design is enjoying successful partnership achievements, including orders from several projects participating in the Private 5G demonstration project of the Ministry of Internal Affairs and Communications (MIC) of Japan.

VOICE -----

Ryo Haruguchi and Namio Sukegawa

Anritsu Customer Support Co., Ltd.

Anritsu Customer Support provides field measurement services. We use Anritsu's measuring instruments to visualize the status of Private 5G radio waves, share the data with customers at the measurement site, and then present the results and insights from actual measurements at a later date. Field measurements often differ from simulated results due to such factors as vegetation, buildings, and topography, and this aids in more accurately designing the coverage areas.

Creating a Symbiotic Society

Establishment of Hapi Sma Co., Ltd.

In September 2021, Anritsu Corporation established Hapi Sma Co., Ltd. as a wholly owned Anritsu Group company to provide opportunities for people with disabilities to work in a company where a diverse range of employees work together in a friendly, gentle, warm, and supportive atmosphere. At present, the company's main business is soap manufacturing.

In January 2022, the company obtained certification as a special subsidiary as stipulated in the Act to Facilitate the Employment of Persons with Disabilities.

VOICE -----

Kenichi Saito President, Hapi Sma Co., Ltd.

Our company name "Hapi Sma" is derived from "Happy & Smile," and our company logo, featuring a smiling face, is intended to convey our organization's friendly, soft, and warm atmosphere and the diverse range of people that it employs. Upholding our

mottoes of "never judge," "never rush," and "never give up," we will continue to maintain a workplace in which employees are happy to work, with smiles on their faces, and strive to be an organization that can contribute to the sustainability of society.

Working Together to Prevent the Spread of COVID-19 in Local Communities

Anritsu's Masks and Workplace Vaccination

As part of our efforts to prevent the spread of COVID-19, we have introduced manufacturing equipment to produce non-woven masks in-house. In addition to distributing masks to our employees and customers, we have also donated more than 200,000 masks to Atsugi City and a soccer club (Hayabusa Eleven) based in Atsugi City. We donated extra masks to Hayabusa Eleven so that they can be used not only by players and staff members but also by local residents to help prevent the spread of infection. Furthermore, we provided workplace vaccinations to our employees and family members in cooperation with a hospital in the city.

Yutaka Mizuhashi Anritsu Corporation Kazuvoshi Yamaki Anritsu Health Insurance Association

All members of our COVID-19 response team are on the same page when it comes to preventing the spread of the virus by doing everything we can, never allowing it to spread within the Company, and never causing any inconvenience to our customers. Producing our own masks demonstrates our commitment. We also arranged for three vaccinations to be administered three times in the workplace, with the entire team working together to ensure the venue is protected against the pandemic.

We believe that providing vaccinations for employees as well as family members contributed to the prevention of COVID-19 in local communities.

Hapi Sma Co., Ltd. is mainly engaged in manufacturing soap and other related products and offers a work environment where people with disabilities can demonstrate their unique strengths and abilities.

Our company name, "Hapi Sma," is derived from "Happy" and "Smile," and our company logo expresses the friendly, gentle, and welcoming atmosphere of our organization as well as the diverse range of people that work here.

We continue being a company in which all of our employees, regardless of disability, share their values and work together to contribute to a sustainable society.
