Optical Spectrum Analyzer
MS9740A
600 nm to 1750 nm
Improved Production Efficiency Reduces Measurement and Inspection Times

Reduce the manufacturing costs is a key issue for vendors of active optical devices. Measuring instruments for device evaluation are expected to increase productivity by shortening inspection times.

The Optical Spectrum Analyzer MS9740A reduces the total time from waveform sweeping to data transfer to external control equipment and supports simple analysis procedures, offering excellent cost performance and better productivity.

Reduces the Time from Waveform Sweeping to Data Transfer by 80% Compared to Previous Models

Waveform Sweeping

Spectrum Measurement at 0.2 s/5 nm Sweeping

High-speed waveform sweeping and range processing support spectrum measurement at 0.2 s/5 nm.

The spectrum change and variation in noise level can be monitored and the waveform light source can be switched.

Analysis

Eight Analysis Menus

• LD-Module
• DFB-LD
• FP-LD
• LED
• PMD
• WDM
• Opt. Amp
• Opt. Amp (Multi-channel)
• WDM Filter

Data Transfer

Instant Data Transfer

Data is transferred at high speed from waveform sweeping to external controller equipment.
Ideal Solution for Active Optical Device Evaluation

This all-in-one unit has the performance and functions for evaluating all active optical devices, including SFP, XFP, and SFP+ modules, as well as optical transceivers and VCSEL and DFB optical sources. Evaluation results, such as center wavelength, level, spectrum, SMR, OSNR, etc., are displayed on one screen. Combination with a Bit Error Rate Tester (BERT) supports spectrum analysis of optical transceiver outputs and WDM signals.

- Wavelength sweep time <0.2 s
- Built-in application for optical active device evaluation (LD module test)
- Option for multimode measurements (Multimode Fiber Interface (50/62.5 μm) option MS9740A-009 )
- Supports LC connector using conversion adapter
- All-in-one function (MM mode) supporting SM and MM fiber*

*: The MS9740A-009 Multimode Fiber Interface option is designed for multimode connections to the optical input section; it supports measurements with high optical sensitivity and high sweep speeds when using a MM fiber with a core diameter of 62.5 μm and a NA of ≤0.275. Although the MS9740A-009 option can also be used to measure SM fiber, some features are different from the standard MS9740A model. For details refer to the MS9740A and MS9740A-009 specifications.

Supports High Resolution and Wide Dynamic Range Required for WDM Signal Evaluation

The wide dynamic range and high resolution support OSNR analysis of WDM signals, etc.

- Dynamic range >58 dB (at 0.4 nm from peak wavelength)
- -90 dBm lowest optical sensitivity
- 30 pm minimum resolution
- ±20 pm wavelength accuracy (C/L band, at wavelength calibration using wavelength calibration light source)
- Supports signal level integration function supporting modulation signals
- Accurate noise position estimation using noise fitting function
- Supports optical axis alignment, wavelength calibration, effective resolution calibration functions

Supports Nine Application Modes

The MS9740A supports nine application measurement modes (DFB-LD, FP-LD, LED, PMD, Opt. Amp, Opt. Amp (Multi-channel), WDM, LD Module, WDM Filter) for measurement targets.

For example, at evaluation of LD characteristics, analysis items and methods can be tailored to the spectrum, such as a Single longitudinal mode laser (DFB-LD) spectrum, Multiple longitudinal mode laser (FP-LD), wideband LED, etc. Furthermore, analysis of each wavelength channel required by WDM signals is supported too. Combining test items into a menu supports easy batch measurement.

Easy to View and Easy to Use with Large 8.4” Display, Full Interface Line-up, and Storage Functions

Increasing the screen to 8.4 inches makes operation much easier than previous generations, while dedicated front-panel function keys simplify procedures like setting wavelength sweep width, resolution, measurement sensitivity, markers, etc., supporting intuitive operation.

Built-in Ethernet (TCP/IP) and GPIB (option) interfaces support transfer of measurement screen capture files to an external PC at remote operation. In addition, the large internal memory can save up to 1000 measurement files. Files can also be exchanged between the main unit and PC via the USB port.

The embedded Windows OS simplifies measurement menu selection and parameter setting with familiar PC-like mouse operations.

- 8.4-inch large LCD
- Ethernet, GPIB (option) external interface
- USB storage function

Windows® is a registered trademark of Microsoft Corporation in the USA and other countries.
**Optical Spectrum Analyzer MS9740A Various Measurement Applications**

**Fast and Easy Analysis**

**Example of Optical Transceiver Measurement**

**LD Module Test Analysis**

This application measures test items such as center wavelength, optical level, OSNR, etc., required for LD module tests, and displays the results on one screen. The center wavelength, optical level, OSNR (per nm), side mode suppression ratio (SMSR) and 20 dB down spectrum width of LD modules can be measured. The center wavelength and spectrum half-width (FWHM) of FP-LDs or VCSELs are measured using the RMS method. Both SM and MM fibers are supported by one unit, helping cut equipment costs.

**LD Module Test Items**

- Center wavelength, Level
- OSNR (actual measured value)
- OSNR (noise level per nm)
  - OSNR noise level specified from Higher, Left, Right, (L+R) / 2 or distance from peak wavelength
- SMSR
- Side mode peak wavelength, Level
- Spectrum width (n dB, RMS method, Standard deviation)
Optical Spectrum Analyzer MS9740A Various Measurement Applications

Fast and Easy Analysis

Optical Chip/CAN Device Evaluation
Evaluation systems for optical Chip/CAN devices must support efficient measurements of multiple devices and two key factors are short evaluation time as well as fast optical axis alignment time for each device. For example, irrespective of the LD type, optical axis alignment using MM fiber for receiving radiated light in a short time with good efficiency requires a lot of time consuming work. In this case, the optical spectrum analyzer finally receiving this light must also have the lowest possible connection loss and excellent high-speed sweep performance for waveform analysis.

The MS9740A-009 is ideal for evaluating optical devices mainly using this type of MM fiber.

The MS9740A-009 optical receiver section is optimized for MM fiber connections. Since extremely accurate sensitivity settings (VBW) are supported, MM fiber connection loss is kept to a minimum and the characteristics of multiple devices can be evaluated efficiently because the optimum sensitivity for level and SMSR measurements as well as high-speed sweeping conditions are both assured.

In addition, the MS9740A has high resolution even in the short wavelength band, and offers optimized applications for VCSEL, etc., evaluations.

The wavelength sweep time changes according to the VBW and measurement wavelength range; the relationship is shown in the following table.

Optical Spectrum Analyzer MS9740A Various Measurement Applications

Analyze 100 GHz and 50 GHz Spaced WDM Signal at Once

WDM Application

The 42 dB dynamic range at 0.2 nm from the peak wavelength supports accurate WDM signal measurement at 100 and 50-GHz intervals.

Up to 300 channels can be evaluated and data required for WDM signal analysis, such as center wavelength, level, SNR, etc., are displayed on one screen. Specification of the noise location, which is required at OSNR analysis, can be selected using two estimation methods; 2-point interpolation, and noise fitting interpolation of a specified noise area. The 2-point interpolation method auto-analyzes the Dip point between each channel, but the distance from the center wavelength can be specified.

It can be difficult to estimate noise accurately if the noise is not flat and the edges of the spectrum appear to overlap at adjacent channels. In these cases, accurate OSNR measurement is impossible, but analysis by noise fitting is effective. Either of the two MS9740A noise fitting methods — specification of the noise area for each WDM signal channel, or user-specification of the noise area — can be selected.

Sufficient measurement dynamic range must be secured to measure noise position accurately for OSNR measurements. Consequently, a high resolution setting is required, but when measuring the level of a wide spectrum signal with modulation, the level cannot be measured accurately when measuring the spectrum peak at high resolution. To resolve this contradiction, the MS9740A has a built-in signal integration function that accurately measures signal level by integrating the signal even at high resolution.

- **Example of Spectrum with Level Analysis by Signal Integration Method**
EDFA Analysis Application

The gain characteristics and Noise Figure (NF) are key optical fiber amplifier performance indices. The MS9740A calculates the gain and NF automatically from the optical input and output to the optical fiber amplifier. It supports two EDFA measurement applications: Opt. Amp inherited from the MS9710 series; and Opt. Amp (Multi-channel) for WDM signals and the latest IEC standards.

Opt. Amp Mode Analysis

This legacy application is inherited from the MS9710 series EDFA analysis function.

The Amplitude Spontaneous Emission (ASE) level is measured either by pulse measurement, interpolation using fitting, or polarization nulling.

Opt. Amp (Multi-channel) Mode Analysis

The optical fiber amplifier gain and NF characteristics are different when using a single light source or WDM signals.

When assuming actual WDM transmission, it is extremely important to perform optical fiber amp analysis using a WDM signal as the measurement signal and this EDFA analysis measurement mode supports WDM signals. The IEC-recommended ISS (Interpolated Source Subtraction) method is supported for gain and ASE analysis, and a mode for automatically detecting the noise position is also provided.

The Gain Variation and the Output Slope analysis are also supported within the same application.

Example of Opt. Amp (Multi-channel) Analysis Function Measurement
Narrow-band Filter Analysis using Trace Mode

Evaluation of passive devices, such as FBG, AWG, OBPF, etc., uses a wideband light source. The variance between results with and without (reference measurement) the DUT is measured to evaluate the DUT characteristics. The MS9740A has a large waveform memory for saving up to 10 waveforms and a wavelength difference calculation function making it easy to evaluate devices such as optical switches.

Evaluation of passive device also requires a wide dynamic range. The MS9740A is perfect for these evaluations because it has a wide dynamic range of 42 dB at 0.2 nm from the peak wavelength and 58 dB at 0.4 nm from the peak. Moreover, because minimum wavelength resolution is 30 pm and minimum light-reception sensitivity is –90 dBm, the MS9740A can easily evaluate the characteristics of narrow-band filters, etc.

In addition, all 10 waveforms displayed on one screen can be saved in one file.
Optical Spectrum Analyzer MS9740A Various Measurement Applications

Easy Reference Measurement of Optical Filters using Waveform Difference Display

WDM Filter Measurement Application
Fast evaluation of optical devices requires short inspection times using high-efficiency measuring equipment. The MS9740 adds a new WDM Filter analysis function supporting group display for optical bandpass filters, such as WSS and WDM Filter devices.

Transmittance Evaluation
The WDM Filter analysis function supports efficient evaluation of optical bandpass filter transmittance characteristics.

Insertion Loss Evaluation
Filters, such as optical bandpass filters, are evaluated by finding the difference in the measured results when the filter (DUT) is inserted and not inserted. The MS9740A Trace Mode function supports measurement using optical switches to measure DUT insertion loss by inter-waveform processing, saving the results in one file and displaying up to 10 waveforms simultaneously on one screen.
SM/MM Fiber Support
At optical device evaluation and measurement, it is important to suppress the effect of reflections at the optical input section. The MS9740A achieves a reflection attenuation of 35 dB max. using a fiber input structure for high-accuracy spectrum measurement. The MS9740A-009* option also supports connection of SM fiber.

* The MS9740A-009 Multimode Fiber Interface option is designed for multimode connections to the optical input section; it supports measurements with high optical sensitivity and high sweep speeds when using a MM fiber with a core diameter of 62.5 µm and an NA of ≤0.275. Although the MS9740A-009 option can also be used to measure SM fiber, some features are different from the standard MS9740A model. For details refer to the MS9740A and MS9740A-009 specifications.

Various Trace Displays
In addition to the normal waveform displays, the MS9740A has a full range of flexible display modes including Max Hold for displaying peak levels at continuous sweeping, Min Hold for displaying dip level at continuous sweeping, Calculate for computing differences between traces, etc.

Max Hold, Min Hold Display Function
These display functions are convenient for confirming maximum and minimum levels at continuous sweeping.

The Overlap function superimposes all swept waveforms on one screen. It is ideal for checking the wavelengths of optical sources and long-term level drift.

Modulated and Pulse Light Measurements
Measurement of modulated and pulsed optical signals requires synchronization with modulation. The trigger input connector on the rear panel of the MS9740A supports input of an external trigger synchronized to the internally modulated light, supporting measurement without data loss.

Wavelength Calibration Function for Accurate Measurements and Analysis
Assuring reliable measurement and analysis requires measurement with the best accuracy and resolution, which in turn requires automatic alignment of the internal optical axis, wavelength calibration with an external light source, and resolution calibration.

A wavelength accuracy of ±20 pm is assured by calibrating the wavelength using the Light Source for Wavelength Calibration (MS9740A-002) after automatic optical axis alignment.

In addition, the MS9740A has a function for automatically calibrating wavelength if the ambient temperature and pressure change, based on the first calibration data. Calibration of effective resolution is important when measuring the noise level of a continuous spectrum, such as EDFA ASE, LDs, etc.

Easy Reference Measurement of Optical Filters using Waveform Difference Display
Screen Hard Copy
The built-in screen hard copy function dumps the screen image as a bmp or png file, which can be easily transferred to a PC via the Ethernet or GPIB interface using a remote command.

Save 10,000 Waveforms to Internal Memory
Measured and analyzed data can be saved to internal memory. Up to ten waveforms (Trace A to J) can be saved in one file and up to 1000 files can be saved to internal memory. These files can be saved to USB memory as well.

Six USB Ports
The six USB ports (two on front and four on rear) can be used to move data in internal memory to external USB memory while keeping a USB mouse and keyboard connected, making waveform analysis and file management easier than ever.

Remote Control via Ethernet and GPIB Interfaces
Remote control is supported over either the Ethernet or GPIB (option) interfaces, slashing the time from measurement start at the MS9740A to data capture at an external PC via the GPIB interface by 80% compared to previous measurement systems.

Backward Compatibility with MS9710/MS9780 Series Remote Commands
Support for almost all remote commands used by the previous MS9710 and MS9780 series of instruments assures smooth backwards compatibility and easy future-proof migration to newer instruments.

Remote Tool Package
The MS9740A Remote Tools Package supports easy creation of remote command sequences software.

- The Remote Tools Package includes the quick-start guide, sample programs, C# class library, and LabVIEW driver.
- Sample Programs: MS9740A control program created using Visual Basic
- C# Class Library: DLL using NET framework
- LabVIEW Driver: NI LabVIEW 7.1 driver

VGA Output
The VGA connector displays measurement and setting screens on an external display for easy group viewing, etc.

Compact and Low Power Consumption
Weighing in at under 15 kg, the MS9740A is the world’s lightest bench-top spectrum analyzer (at October 2011). Consuming under 75 VA, or less than half its predecessors, it’s also eco-friendly too. And not only does it save power, it’s quiet as well, making it the ideal bench-top companion.
Optical Spectrum Analyzer MS9740A Panel Layout

1. **8.4-inch Liquid Crystal Display (LCD)**
   Waveforms and results are easy to read on the large display. The familiar Windows GUI makes operation with a mouse easy too.

2. **Measurement and Shortcut Keys, and Encoder**
   These keys are used to make settings and perform analysis. Common operations have shortcut keys.

3. **Light Source for Wavelength Calibration Option**
   Wavelength measurement can be calibrated to achieve ±20 pm accuracy (1520 nm to 1620 nm) by inputting light from this option into the optical input connector.

4. **Optical Receiver Connector**
   Both SM and MM fiber connections are supported by exchangeable connector types (FC, SC, ST, DIN).

5. **USB Port**
   This connector supports a USB mouse, keyboard or memory (for easy file exchange).

6. **Trigger Input**
   This connector is for inputting a synchronous signal to measure modulation and pulse signals.

7. **GPIB Interface Option**
   This connector supports external control from a PC over GPIB.

8. **Ethernet Interface**
   This connector supports external control from a PC via Ethernet.

9. **USB Port**
   This connector supports a USB mouse, keyboard or memory (for easy file exchange).

10. **VGA Output**
    This connector is for an external VGA screen.

11. **PS/2 Port**
    This connector is for a PS/2 mouse or keyboard.
## Optical Spectrum Analyzer MS9740A Specifications

### Supported Optical Fiber
- SM fiber (ITU-T G.652), 50 µm/125 µm GI fiber*1, PC Connector (reflection attenuation 40 dB or more)

### Optical Connector
- User replaceable: FC, SC, ST, DIN (All connectors are PC polished.)

### Wavelength Measurement Range
- 600 nm to 1750 nm

### Wavelength Stability
- ±0.05 nm (1 min, smoothing: 11 pt, at center wavelength of half maximum, Using SM fiber)

### Wavelength Linearity
- ±0.02 nm (1520 nm to 1620 nm)

### Setting Resolution
- 0.03, 0.05, 0.07, 0.1, 0.2, 0.5, 1.0 nm (0.03 nm, 0.05 nm only 1550 nm band and room temperature)

### Resolution Accuracy
- ±1 % (Resolution: 0.1 nm), ±3 % (Resolution: 0.2 nm), ±2 % (Resolution: 0.5 nm) [1520 nm to 1620 nm]

### Measurement Range
- -65 to +10 dBm (600 nm to 1000 nm), -85 to +10 dBm (1000 nm to 1250 nm), -90 to +10 dBm (1250 nm to 1600 nm), -85 to +10 dBm (1600 nm to 1650 nm), -65 to +10 dBm (1650 nm to 1700 nm), -55 to +10 dBm (1700 nm to 1750 nm) (5° to 30°C, VBW: 10 Hz, Sweep average: 10, Resolution: 0.07 nm to 1.0 nm, using SM fiber, Optical Att: Off)
- -60 to +10 dBm (600 nm to 1000 nm), -80 to +10 dBm (1000 nm to 1250 nm), -85 to +10 dBm (1250 nm to 1600 nm), -80 to +10 dBm (1600 nm to 1650 nm), -60 to +10 dBm (1650 nm to 1700 nm), -50 to +10 dBm (1700 nm to 1750 nm) (3° to 45°C, VBW: 10 Hz, Sweep average: 10, Resolution: 0.07 nm to 1.0 nm, using SM fiber, Optical Att: Off)
- -70 to +23 dBm (1100 nm to 1600 nm)
- -80 to +23 dBm (1100 nm to 1800 nm)
- -85 to +23 dBm (1100 nm to 1900 nm)
- -90 to +23 dBm (1100 nm to 2000 nm)

### Optical Return Loss
- ±0.05 dB (Wavelength: 1550 nm, Input: –30 dBm, Resolution: 0.1 nm to 1.0 nm, no polarization fluctuation)

### Dynamic Range

#### High dynamic range:
- 70 dB (1 nm from peak wavelength), 60 dB (0.4 nm from peak wavelength), 42 dB (0.2 nm from peak wavelength)
  - Normal dynamic range: 62 dB (1 nm from peak wavelength), 58 dB (0.4 nm from peak wavelength), 42 dB (0.2 nm from peak wavelength)
  - [Wavelength: 1550 nm, Resolution: 0.05 nm, Optical Att: Off, 20° to 30°C]
- 70 dB (1 nm from peak wavelength), 60 dB (0.4 nm from peak wavelength), 42 dB (0.2 nm from peak wavelength)
  - [Wavelength: 1550 nm, Resolution: 0.05 nm, Optical Att: Off, 20° to 30°C]

#### Normal dynamic range:
- 70 dB (1 nm from peak wavelength), 60 dB (0.4 nm from peak wavelength), 42 dB (0.2 nm from peak wavelength)
  - [Wavelength: 1550 nm, Resolution: 0.05 nm, Optical Att: Off, 20° to 30°C]
  - [Wavelength: 1550 nm, Resolution: 0.05 nm, Optical Att: Off, 20° to 30°C]

### Optical Return Loss
- ±35 dB (Using SM fiber with wavelength of 1300 nm and 1550 nm)

### Sweep
- Sweep width: 0.2 nm to 1200 nm, 0 nm
- Sweep speed: 30.2 s (span: 5 nm, Resolution: 0.1 nm), 30.3 s (span: 500 nm)
  - [VBW: 10 kHz, Normal dynamic range, center 1550 nm (span: 5 nm), 1200 nm (span: 500 nm), sweep start to stop, no optical input, sampling point: ≤501]

### Display
- 800 x 600 dots, 8.4 inch SVGa LCD color

### Wavelength Accuracy
- ±5 pm (1 min, smoothing: 11 pt, at center wavelength of half maximum, Using SM fiber)

### Polarization Dependency
- ±30% (Resolution: 0.1 nm), ±15% (Resolution: 0.2 nm), ±7% (Resolution: 0.5 nm) [600 nm to 1520 nm, 1620 nm to 1750 nm]

### Power Supply
- 100 V(ac) to 220 V(ac)，50 Hz to 60 Hz, ≤75 VA

### Dimensions and Mass
- 426 (W) × 177 (H) × 350 (D) mm (excluding projections), ≤15.0 kg (without options)

### Operating Temperature
- 5° to 45°C, Storage temperature: -20° to +60°C, Relative humidity: 0 to 90% (no condensation)

### Power Supply
- 100 V(ac) to 220 V(ac), 50 Hz to 60 Hz, ≤75 VA

### Operating Environment
- 5° to 40°C, Humidity: 0% to 90% (non-condensing)

### Remote Control Interfaces
- Ethernet, GPIB (Option)

### Function
- Measurement functions: Auto Measure, Optical pulse measurement (External trigger), Power monitor

### Resolution Accuracy
- ±1 % (Resolution: 0.1 nm), ±3 % (Resolution: 0.2 nm), ±2 % (Resolution: 0.5 nm) [1520 nm to 1620 nm]

### Energy Measurement
- 70 dB (1 nm from peak wavelength), 60 dB (0.4 nm from peak wavelength), 42 dB (0.2 nm from peak wavelength)
  - [Wavelength: 1550 nm, Resolution: 0.05 nm, Optical Att: Off, 20° to 30°C]

### Input/Output
- 10° to 30°C

### I/O
- 10° to 30°C

### Notes
- The NI-VISA™ driver can be downloaded from the NI website at: http://sine.ni.com/psp/app/doc/id/psp-411

### Glossary of Terms
- *1: The connection loss when connecting 50 µm/125 µm multimode optical fiber degrades the minimum light reception sensitivity.
- *2: The MS9740A has an MM mode function to correct connection loss when connecting 50 µm/125 µm multimode optical fiber and to display the level. The optical loss level is corrected when the MM mode is On. It corrects the level by 14 dB (sum).
- *3: Built-in MS9740A-002, after Wl cal (ref) wavelength calibration execution, at stable room temperature
- *4: After Wl cal (Ext) wavelength calibration execution by external light source, such as Single Longitudinal mode laser (DFB-LD)
- *5: Effective resolution, after Res-cal, using SM fiber
- *6: Using master FC connector, 23° ±5°C
- *7: 10° to 30°C
- *8: When controlling the MS9740A remotely using the Ethernet port, a NI-VISA™*9 driver must be installed in the PC controller. We recommend using NI-VISA™*10 from National Instruments™ (NI hereafter) as the VISA driver.

Although a license is generally required to use NI-VISA™, the licensed NI-VISA™ driver can be used free-of-charge for use when performing remote control of a MS9740A unit in which the MS9740A-001 GPIB option has been installed.

The NI-VISA™ driver can be downloaded from the NI website at: http://sine.ni.com/psp/app/doc/id/psp-411

To be sure to comply with the NI license agreement for the usage and license scope, be sure to uninstall the NI-VISA™ driver when disposing of the MS9740A or transferring it to a third party, etc., or when ceasing to use NI-VISA™.

(Notes)
- Although the NI-VISA™ driver itself can be downloaded free-of-charge from the web, an implementation license is required for legal reasons if some requirements are not met. (Check the NI web page for the detailed requirements.)
- If these requirements are not met, permission is not granted to use NI hardware and software and an NI implementation license must be purchased. However, since the MS9740A-001 GPIB option incorporates NI hardware (GPIB ASIC), the NI-VISA™ driver can be used free-of-charge.

NI-VISA™ is a registered trademark of National Instruments Corporation and is used herein with permission.

National Instruments™, NI™, NI-VISA™ and National Instruments Corporation are all trademarks of National Instruments Corporation.

*¹: The NA is 0.2 for 50 µm/125 µm GI fiber and 0.275 for 62.5 µm/125 µm GI fiber.  
*²: Warm-up the instrument for at least 2 hours before measurement by performing repeated sweeping at span ≥100 nm, VBW = 10 kHz. Perform waveform calibration after auto-optical alignment (WI Cal) and keep the instrument at the same temperature unless stated otherwise. Use either SM fiber (ITU-T G.652), GI (50 µm/125 µm) with a return loss of >40 dB, or GI fiber (62.5 µm/125 µm) with a return loss of >38 dB.  
*³: Built-in MS9740A-002, after Wl cal (Ext) wavelength calibration execution by external light source, such as DFB-LD, using SM fiber or GI fiber (50 µm/125 µm or 62.5 µm/125 µm)  
*⁴: After Wl cal (Ext) wavelength calibration execution by external light source, such as DFB-LD, using SM fiber or GI fiber (50 µm/125 µm or 62.5 µm/125 µm)  
*⁵: After WI cal (Ext) wavelength calibration execution by external light source, such as DFB-LD, using SM fiber or GI fiber (50 µm/125 µm or 62.5 µm/125 µm)
Optical Spectrum Analyzer MS9740A Ordering Information

Please specify the model/order number, name and quantity when ordering.

The names listed in the chart below are Order Names. The actual name of the item may differ from the Order Name.

(1) Specify the mainframe

<table>
<thead>
<tr>
<th>Model/Order No.</th>
<th>Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS9740A</td>
<td>Optical Spectrum Analyzer</td>
</tr>
<tr>
<td></td>
<td>- Main Frame -</td>
</tr>
<tr>
<td>Z1353A*1</td>
<td>MS9740A Operation Manual (CD): 1 pc</td>
</tr>
<tr>
<td></td>
<td>Power Cord:</td>
</tr>
<tr>
<td></td>
<td>1 pc</td>
</tr>
</tbody>
</table>

(2) Specify one optical connector

<table>
<thead>
<tr>
<th>Model/Order No.</th>
<th>Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS9740A-037</td>
<td>FC Connector</td>
</tr>
<tr>
<td>MS9740A-038</td>

Ordering Configuration 1

(1) MS9740A Optical Spectrum Analyzer
(2) MS9740A-040 SC Connector
(3) MS9740A-001 GPIB Interface
(4) J0617B Optical Connector Adapter (FC) × 2 pcs

- When ordering the main frame, specify model name (1) and one connector from (2).
- Two SC connectors specified in (2) supplied free when light source for wavelength calibration option selected in (3).

Ordering Configuration 2

(1) MS9740A Optical Spectrum Analyzer
(2) MS9740A-037 FC Connector
(3) MS9740A-002 Light Source for Wavelength Calibration
(4) MS9740A-009 Multimode Fiber Interface (50/62.5 μm)

- When ordering the main frame, specify model name (1) and one connector from (2).
- Two FC connectors specified in (2) supplied free when light source for wavelength calibration option selected in (3).
