- One Button Testing

Network Master Flex MT1100A

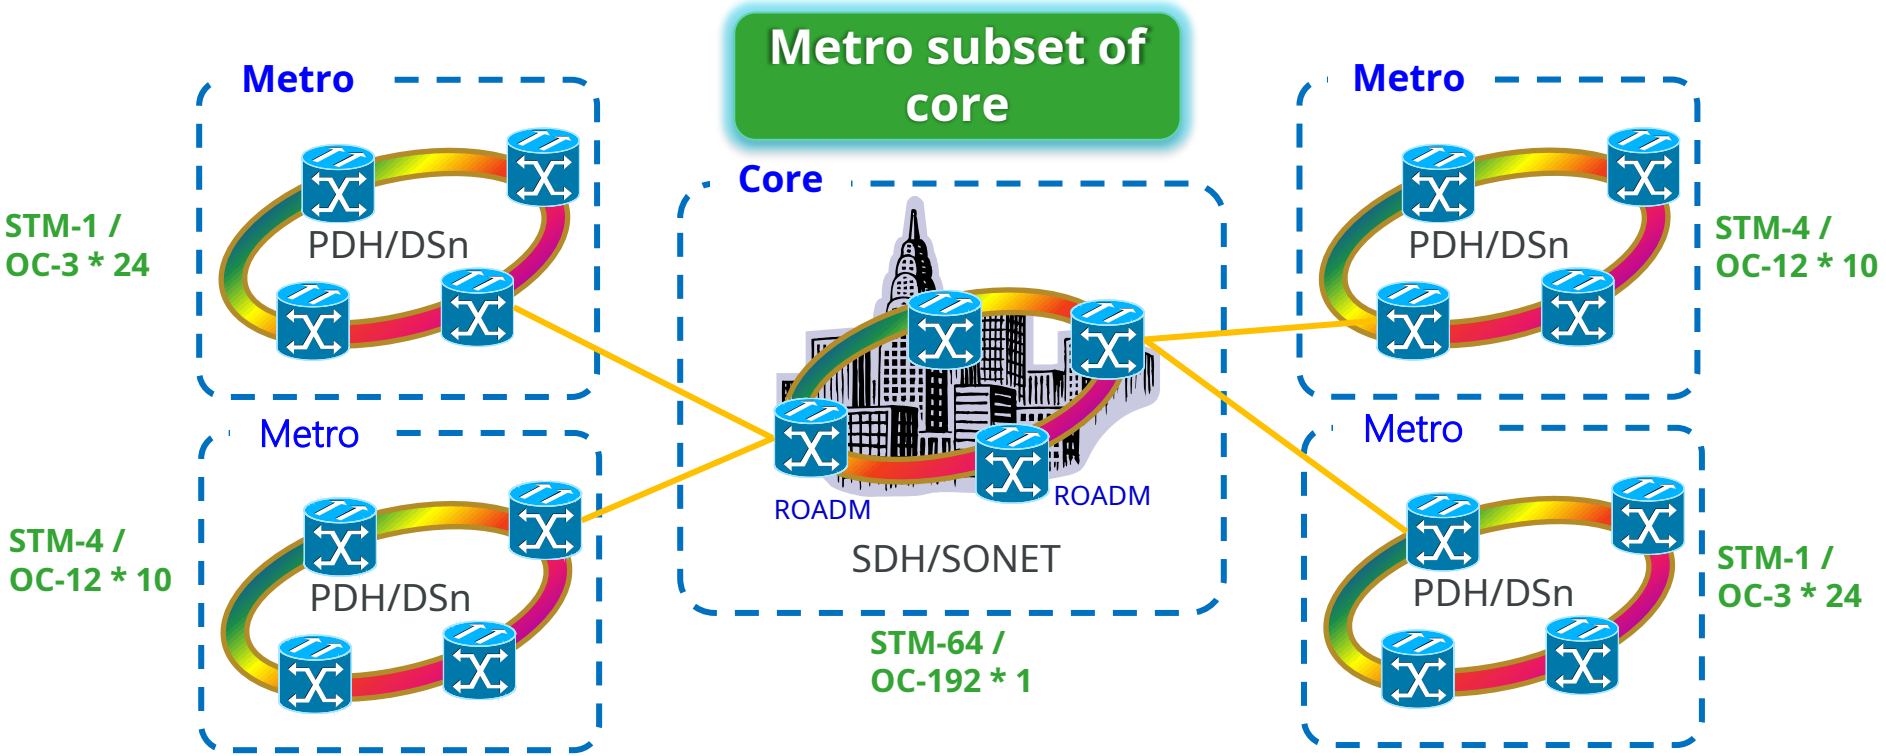
Back to Index page

- Redefining Transport Testing

Market Situation—Historical

Back to Index page

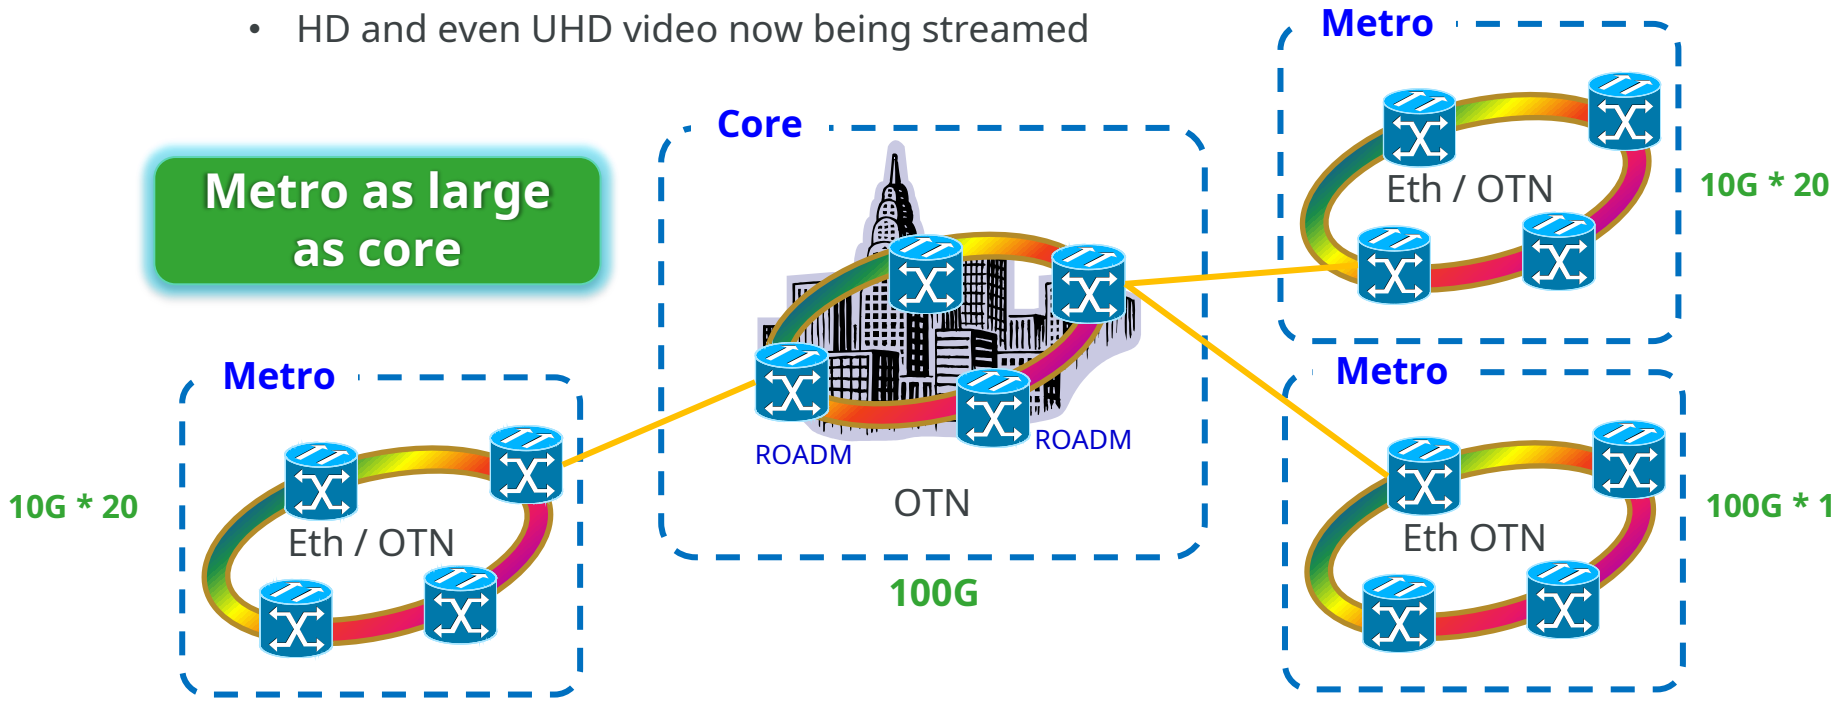
- Core network had multiple metro/access network subsets
  - Much of the network coming to the access network was muxed up to a larger metro network which was muxed up to the core network.
    - Not all traffic was transferred to the core, but a large percentage was.
    - To a large extent, the core was the size of the combined metro networks.



Market Situation—Current and Future

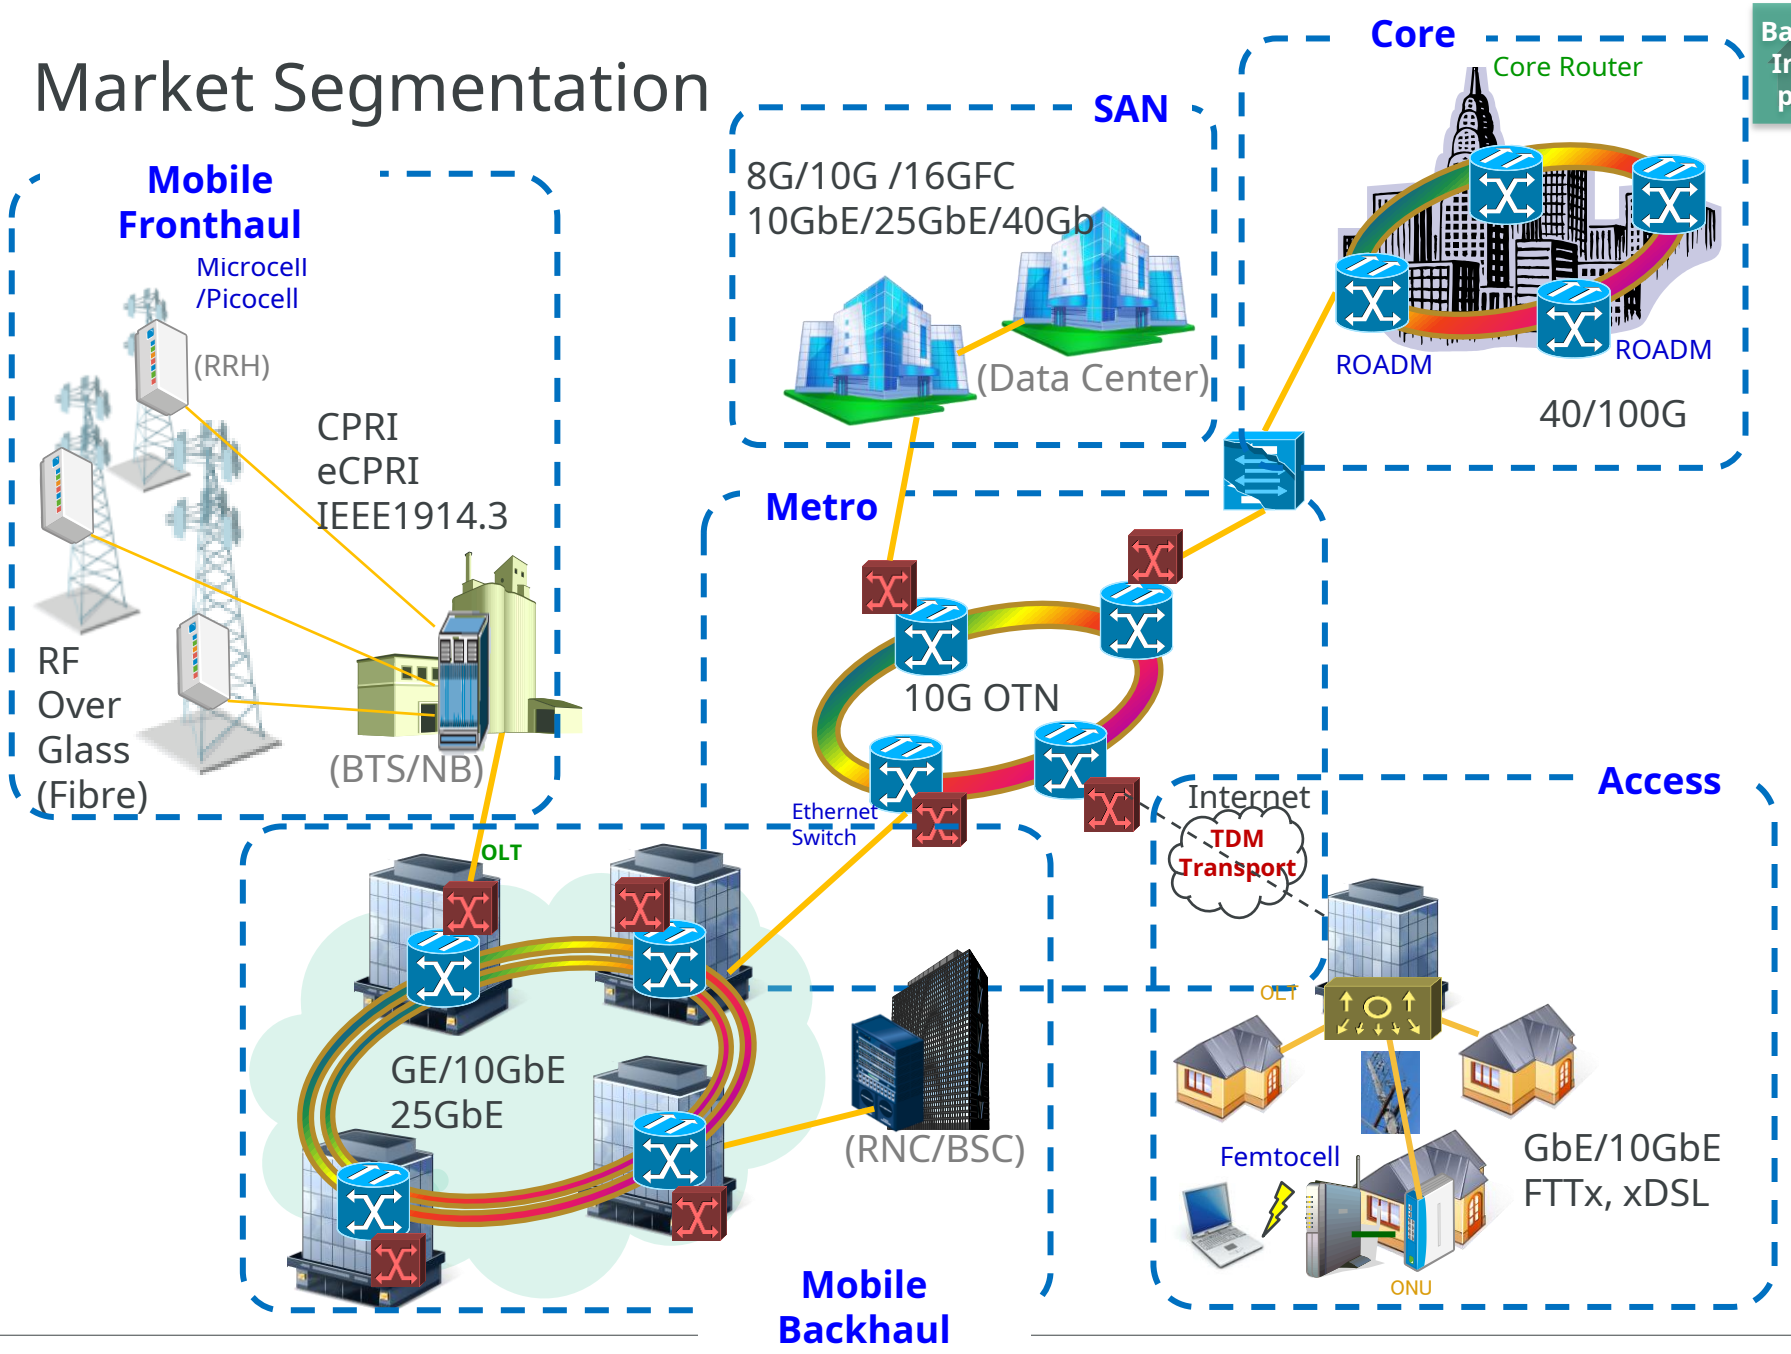
Back to Index page

- Metro networks becoming same or larger size than core
  - Many services now require “near” real-time response (simultaneous multiple access to data)
    - Transferring data long distances to server not ideal
  - Many services to many millions of users (apps) now truly global (apps)
    - A single or even two servers (back-up) isn’t good enough to handle data
  - Many services require very large data from millions of users (video)
    - HD and even UHD video now being streamed



Market Segmentation

Back to Index page

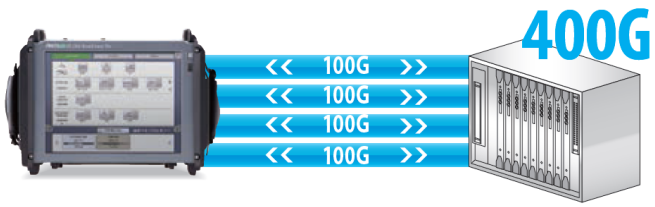


Where to Use MT1100A

Back to Index page

R&D on 400-Gbps Networks

* 4 x 100G client testing with all-in-one tester
* OTN multi-stage mapping and ODU-flex



Network Commissioning Tests

* 100G core network to CPRI/OBSAI mobile fronthaul
* GPS-synchronized one-way latency test
* OTN-mapped client protocol testing
* Y.1564, RFC 2544, RFC 6349

Manufacturing 100-Gbps Transport Equipment

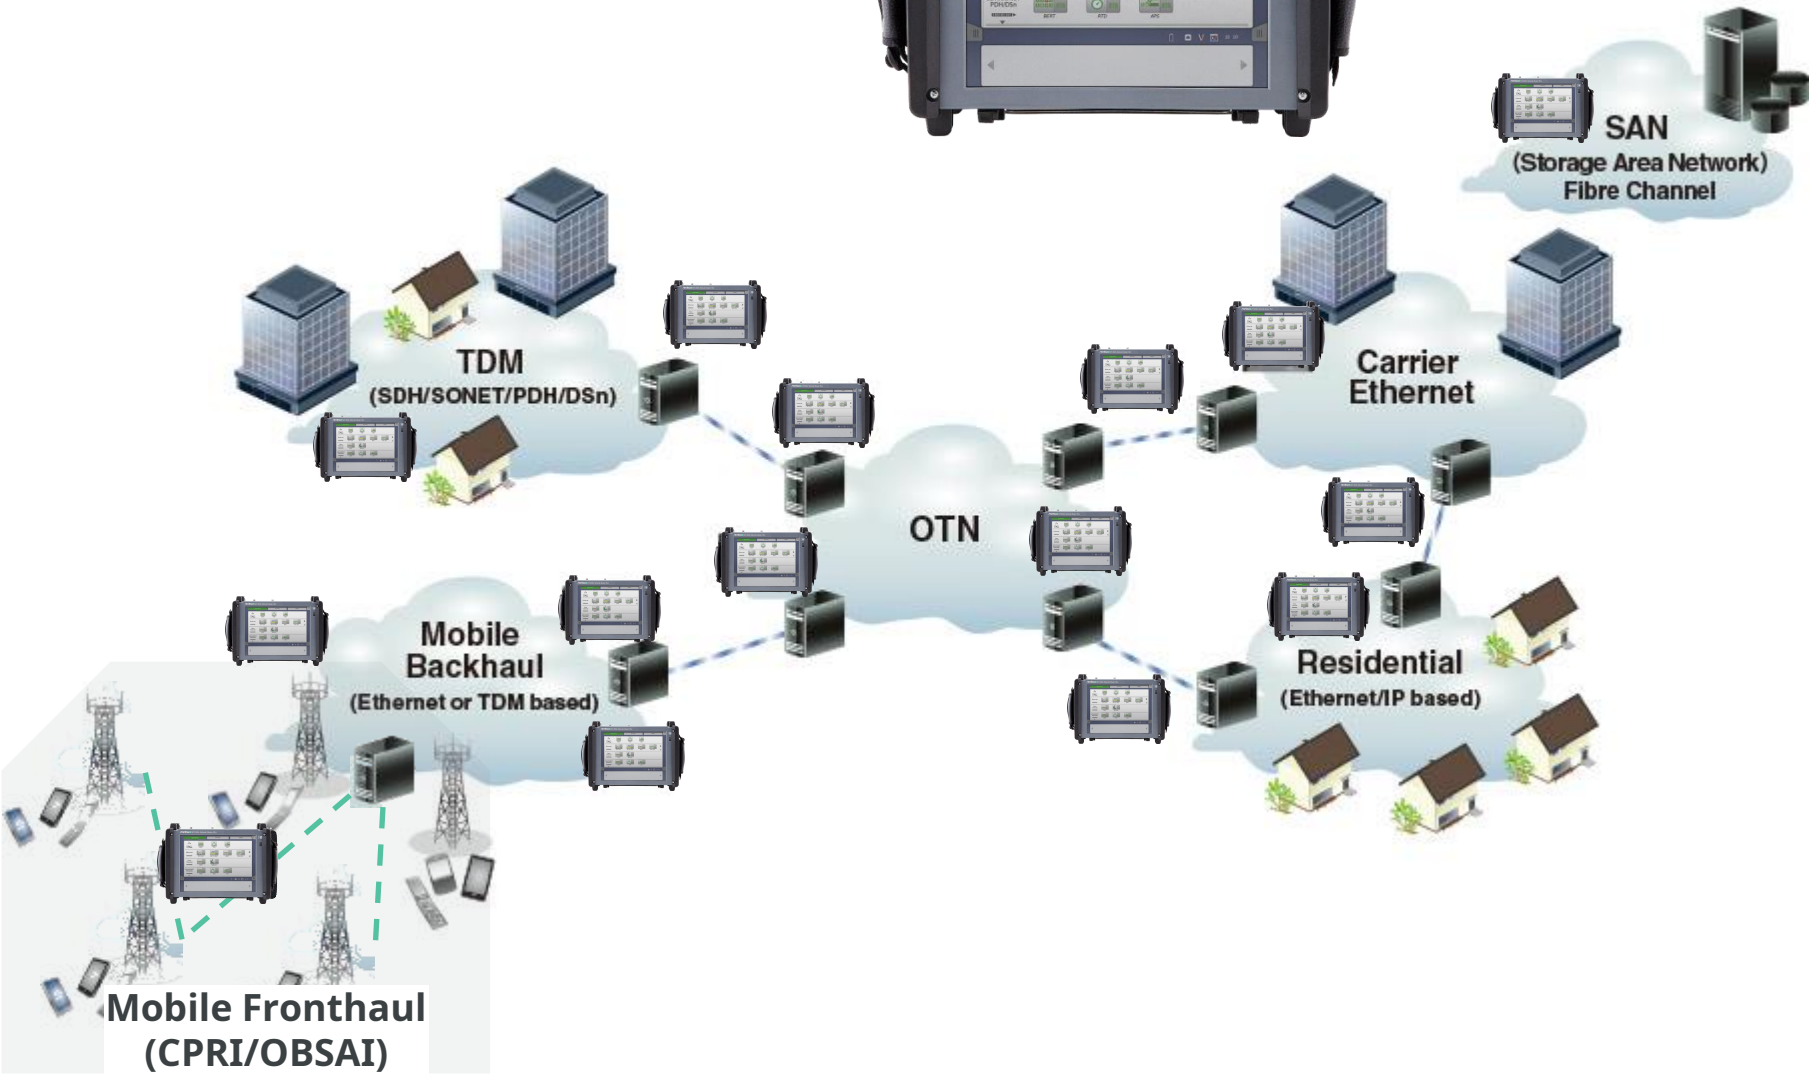
* CFP, CFP2, CFP4, QSFP28, CXP, QSFP+, SFP+, SFP, CAUI, XLAUI interface
* MDIO control
* VOD, Pre-Emphasis, Rx Equalizer
* Multi-users log-in

Troubleshooting

* Simultaneous two-way monitoring
* Channel statistics and Ethernet capture
* Long-term monitoring including remote boot, operation, file transfer and firmware update

Where to Use MT1100A

Back to Index page



Testing Network Equipment for R&D and Manufacturing

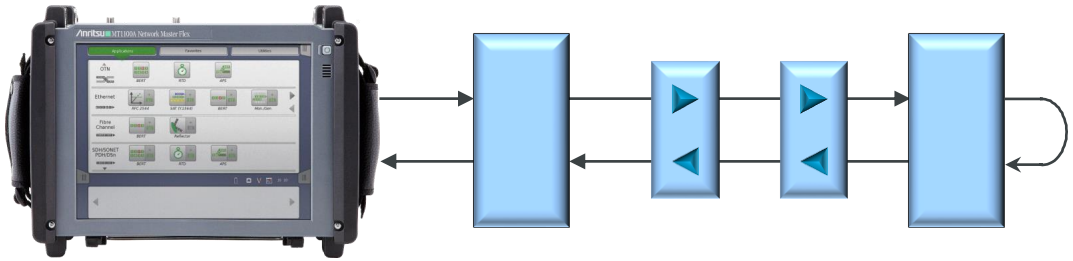
Back to Index page

- Supports performance and functional tests of network equipment from 1.5M to 100G
  - All-in-one support for both latest technologies (such as 100GbE) and existing I/Fs, such as PDH/DSn
  - CFP, CFP2, CFP4 (CFP2/CFP4 adapter required), QSFP28 (CFP2/QSFP28 adapter required), CXP, QSFP+, SFP+, SFP, electrical interfaces including CAUI, XLAUI
  - Multi-user log-in to one instrument using each port independently
- Supports future 400G tests
  - Four 100G ports support 400G client signal (4 x 100G) tests

Out-of-Service Installation Testing (1/2)

Back to Index page

- Installing and commissioning new lines
  - Verify new-line quality/performance before service commissioning
- Troubleshooting with test traffic
  - Test network functions under different loads
- Testing line quality
  - Perform far-end loopback tests using cable or special configuration (protocol dependent)

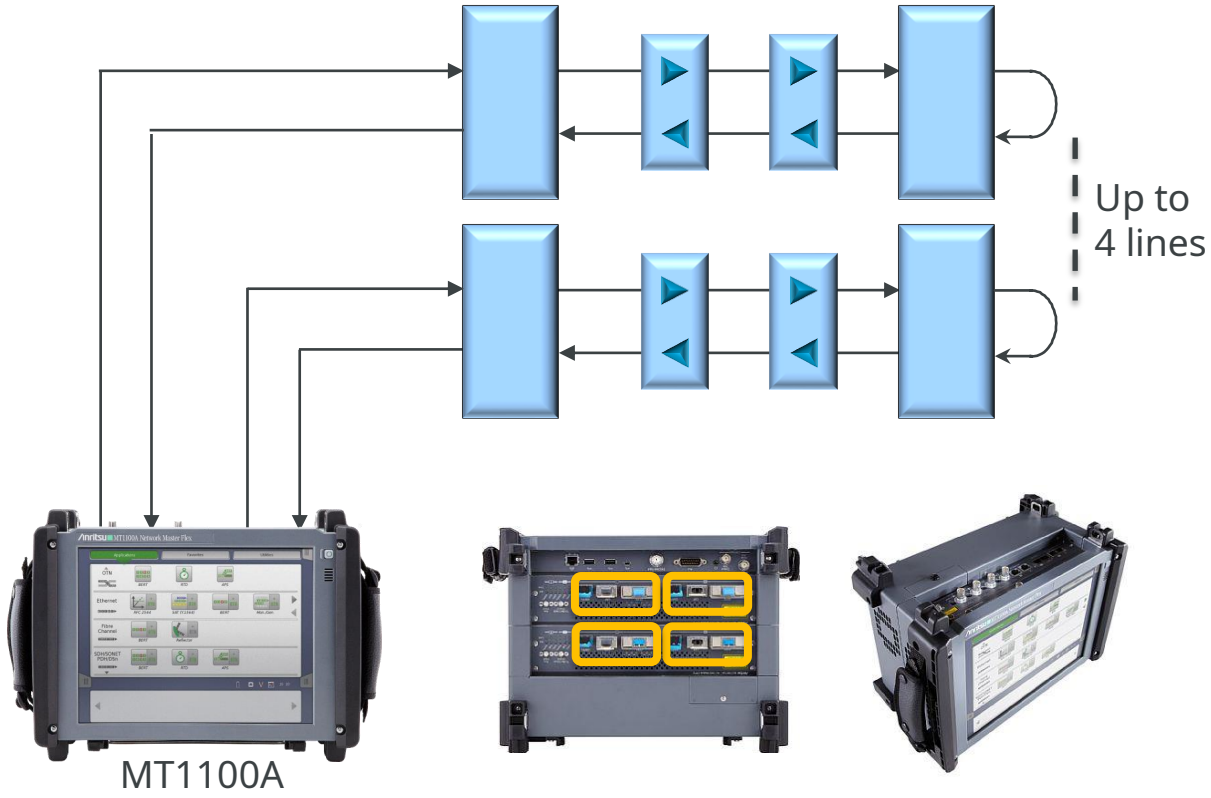


MT1100A

Out-of-Service Installation Testing (2/2)

Back to Index page

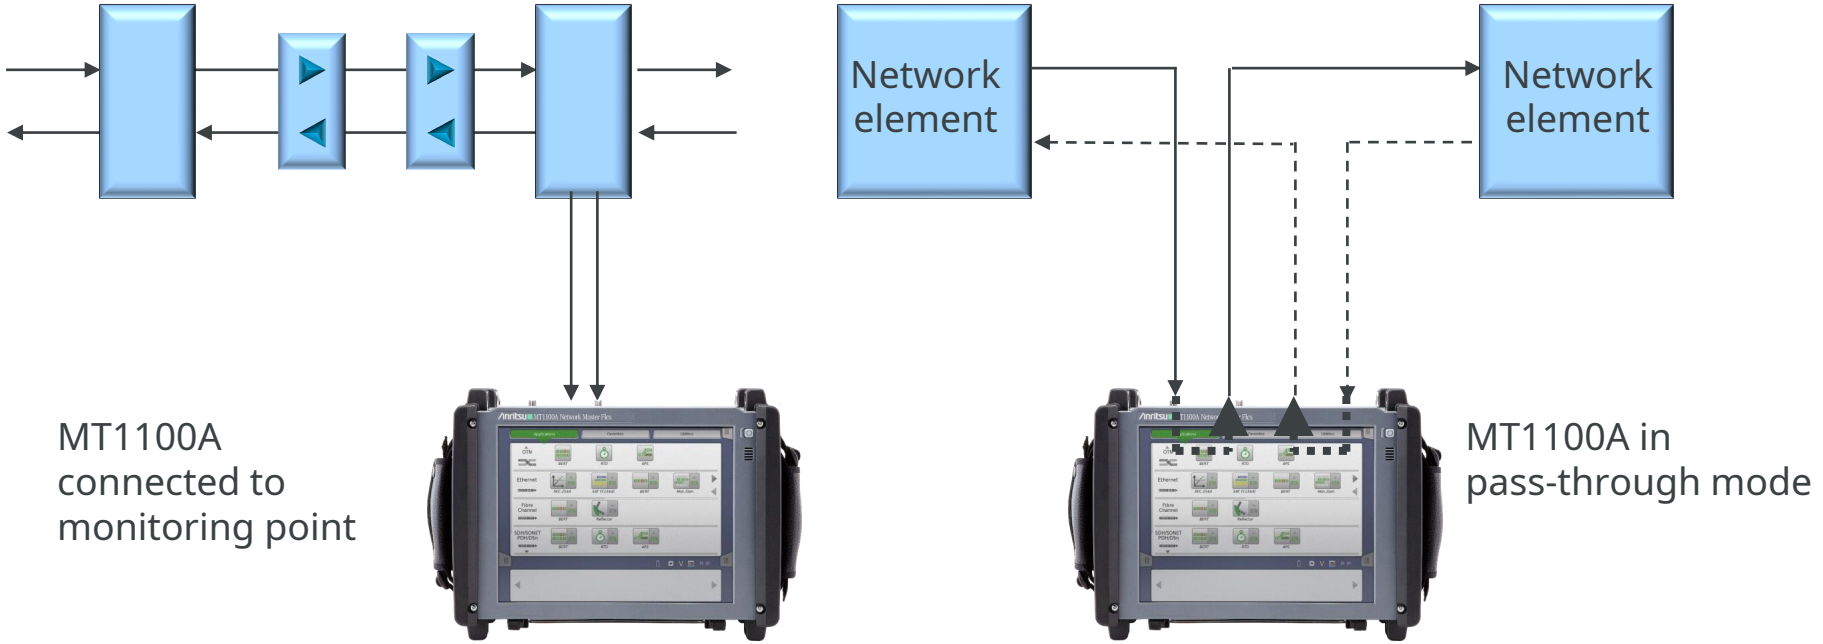
- Efficient simultaneous out-of-service testing of one to four lines
  - Supports up to four fully independent ports at all rates



In-Service Troubleshooting and Analysis

Back to Index page

- Monitoring both line directions simultaneously to troubleshoot communications path problems
  - Optimum communications requires smooth data transport in both directions



MT1100A Key Applications

- Carrier Class Ethernet I&M and troubleshooting
  - Ethernet testing up to 100 Gbps
  - 100GBASE-SR4 FEC Test
  - Include RFC 2544, Y.1564
  - Include RFC 6349 (up to 10 Gbps)
  - Ethernet OAM
  - MPLS-TP and PBB
  - IP Channel statistics (up to 10 GigE)
  - Frame capture for advanced troubleshooting
- Core and Metro networks I&M
  - OTN up to OTU4 including mapping of Ethernet/SDH/SONET/Fibre Channel client signals, multistage mapping, FEC (Forward Error Correction) and O.182 Poisson error
  - Testing and verification of newer OTN functions: ODU0, ODUflex, ODU2e and ODU4
- Mobile backhaul installation and verification
  - Synchronous Ethernet testing up to 10 GigE (ITU-T G.826x and IEEE 1588 v2)
- Mobile Fronthaul installation and verification
  - CPRI testing up to 10 Gbps
  - OBSAI testing up to 6 Gbps
  - eCPRI/IEEE 1914.3 up to 100 Gbps

MT1100A Key Applications

- Powerful Storage Area Networking (SAN) testing
  - Fibre Channel up to 10 Gbps
  - Supports throughput, latency, and buffer credit performance verification
- Quick and easy testing of SDH/SONET, PDH/DSn Networks
  - SDH/SONET up to STM-256/OC-768
  - PDH/DSn (E1, E3, E4, DS1, DS3)
- Fiber end-face inspection using VIP (Video Inspection Probe)
- Four ports at all rates
  - Reduced testing time by simultaneous testing of 2 lines with one unit
  - In-service bi-directional monitoring

MT1100A Key Benefits and Features

- Easy intuitive GUI
  - Large 12-inch touch screen,
  - Eight languages (English, Chinese, Japanese, Korean, German, French, Russian and Spanish)
- WLAN*1/Bluetooth/LAN connectivity
- PDF, CSV and XML report generation for documentation of test results
- Remote operation
  - Using VNC or dedicated GUI operation software
  - Via Ethernet, WLAN
- Remote control (scripting) via Ethernet, WLAN, GPIB
- Portable
- Battery-operated
- High performance in small form factor

*1 Available for certified countries, including USA, Canada, Japan, all EU countries

Network Master Family

Back to Index page

- Transport

Network Master GigE MT9090A	Network Master Pro MT1000A	Network Master Flex MT1100A
Dedicated field test solution for installation and troubleshooting Ethernet links in access network	All-in-one transport tester supporting from 1.5 Mbps to 100 Gbps including OTN, Ethernet, PTP, eCPRI/IEEE 1914.3/CPRI/OBSAI, Fibre Channel, SDH/SONET and PDH/DSn	All-in-one, up to 4-port transport tester supporting from 1.5 Mbps to 100 Gbps including OTN, Ethernet, eCPRI/IEEE 1914.3/CPRI/OBSAI, Fibre Channel, SDH/SONET and PDH/DSn

- Optical

Optical Channel Analyzer MT9090A	µOTDR MT9090A
Compact CWDM channel analyzer to verify power levels, drift and channel presence of CWDM networks	Compact OTDR for fully automatic verification of optical networks, FTTH PON, metro and core

Network Master Flex MT1100A

Back to Index page

- Instrument Views

MT1100A Instrument Views

Back to Index page

Hand-held rugged design
Easy-to-use GUI

Instrument Views

Back to Index page

MU110010A: 10G Multirate Module

Up to 2 ports: 1.5 Mbps to 10 Gbps
(RJ45, SFP+/SFP, RJ48, BNC, BANTAM)

MU110011A: 100G Multirate Module

Single port: 40 Gbps (CFP) or 100 Gbps (CFP)
Up to 2 ports: 10 Mbps to 40 Gbps
(QSFP+, SFP/SFP+, RJ45)

MU110013A: 40/100G Advanced Module

Up to 2 ports: 40 Gbps to 100 Gbps
(CFP2*1, CXP, QSFP+)

*1: QSFP28 can be used by attaching an adapter to CFP2.

J1656A
CFP2-QSFP28 Adaptor

J1756A：Operation is guaranteed only when used in combination with our application parts (G0364A, G0365A, and G0366A).

Network Master Flex MT1100A

Back to Index page

- Carrier Class Ethernet Test

MT1100A Product Highlights

Back to Index page

- Easy Ethernet test solution
  - Ethernet testing
    - 100 Gbps, 10 Gbps, 1 Gbps, 100 Mbps and 10 Mbps
    - 400 Gbps client testing with 4 x 100 Gbps configuration
  - Traffic generation up to full line rate
  - 100 GigE RS-FEC Test
  - Supports IPv4 and IPv6
  - Ethernet Service Activation Test (Y.1564)
  - Automated RFC 2544 testing
    - Throughput
    - Frame Loss
    - Latency or Packet Jitter
    - Burstability
  - TCP Throughput option (RFC 6349) up to 10 Gbps
  - BER testing
    - Includes frame loss and sequence error tests
  - Service disruption measurement

MT1100A Product Highlights

Back to Index page

- Easy Ethernet test solution—continued
  - Comprehensive statistics including:
    - Performance (utilization, Throughput, frame rate)
    - Frame statistics (frame types and errors)
    - Burst statistics
    - Frame size distribution
    - Latency and Packet Jitter measurements
    - Transmitted and received frames and bytes
  - Filters – to extract relevant parts of traffic
  - Thresholds – to highlight abnormal situations
  - Simultaneous monitoring of both directions on line
  - IP Channel Statistics to identify error streams, top talkers, network attacks for up to 230 multiflow counters (up to 10 Gbps)
  - Ethernet OAM: IEEE 802.3 (IEEE 802.3ah), IEEE 802.1ag, ITU-T Y.1731

MT1100A Product Highlights

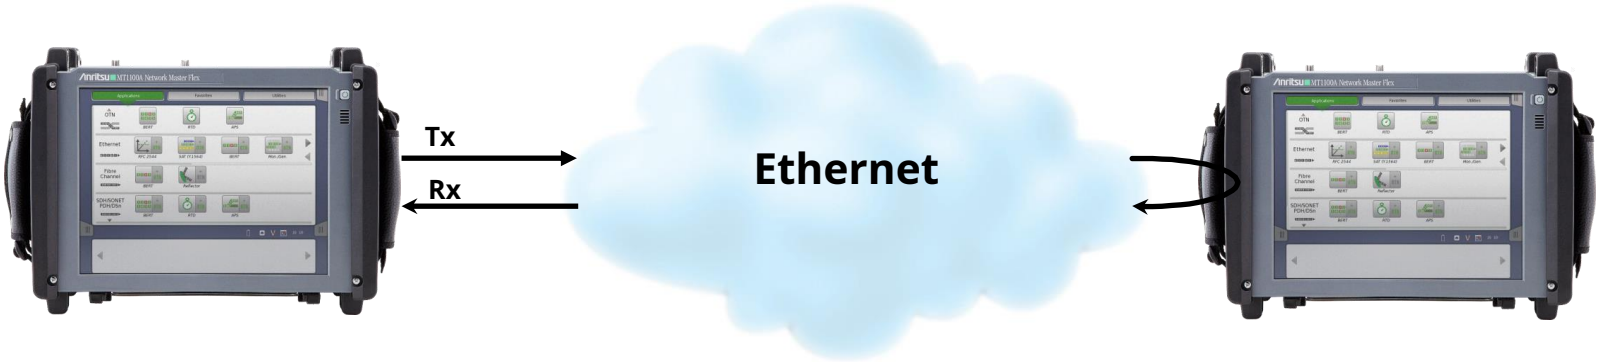
Back to Index page

- Easy Ethernet test solution—continued
  - Synchronous Ethernet Test (G.826x and IEEE 1588 v2) (up to 10 Gbps)
    - For Mobile Backhaul testing
  - Ethernet Multistream: Up to 16 streams per port
    - Information on Throughput, Frame Loss, Packet Jitter and latency per stream
  - Stacked VLAN (Q-in-Q): Up to 8 levels of VLAN tags
  - MPLS/MPLS-TP testing: Up to 8 levels of MPLS labels
  - PBB testing
  - 10G WAN PHY
  - Ping testing
  - Traceroute test
  - Electrical cable test and optical signal level indication
  - Frame capture for protocol analysis by Wireshark®

MT1100A Applications – Out-of-Service Testing

Back to Index page

- Out-of-service Ethernet testing
  - Installation and commissioning of new lines
    - Verification of quality/performance of new lines before commercial operation
  - Troubleshooting with test traffic
    - Functional testing and network behavior at different loads
  - Testing line Quality of Service (QoS)
    - Loop-back MT1100A Ethernet test signal using cable or reflector at far end

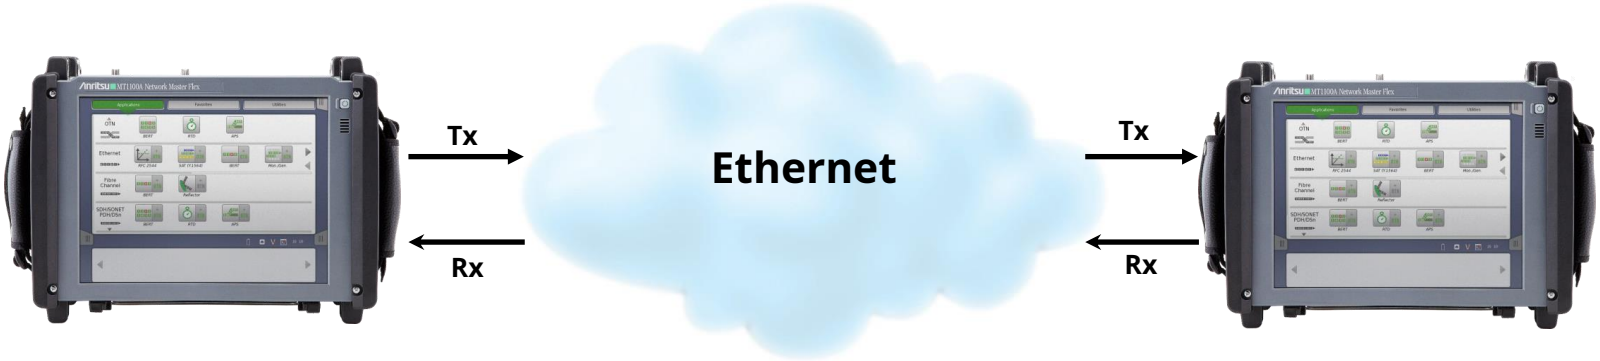


Ethernet testing with far-end reflector

MT1100A Applications – Out-of-Service Testing

Back to Index page

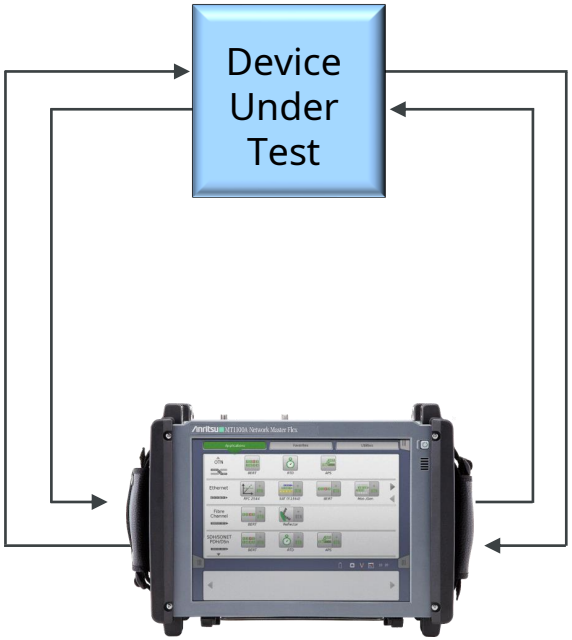
- Ethernet end-to-end testing
  - Due to nature of IP/Ethernet networks key parameters like Throughput, Frame Loss and Packet Jitter may differ in two directions of connection
    - Two instruments needed to capture data for each direction



MT1100A Applications – Out-of-Service Testing

Back to Index page

- Typical applications*1:
  - Dual-port testing of networks or network elements
  - One-way latency measurements
  - Router testing
  - QoS verification

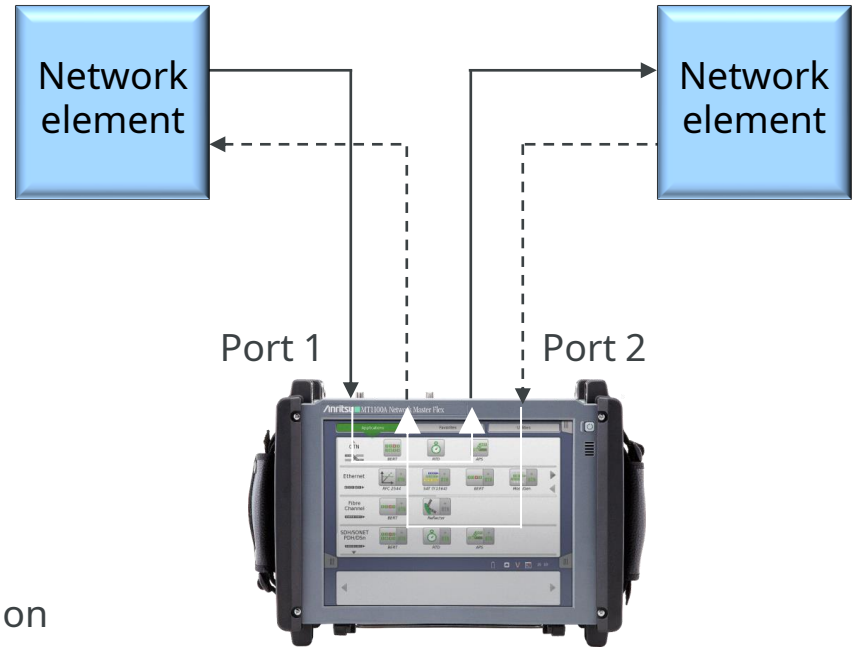


*1 Requires 10 Gbps dual-port option

MT1100A Applications – In-Service Monitoring

Back to Index page

- Typical applications*1:
  - Rapid in-service diagnostics
  - In-service troubleshooting
  - Live traffic analysis and statistics



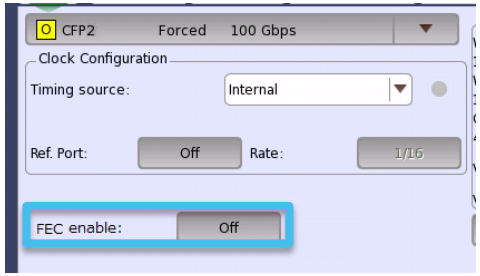
MT1100A in pass-through mode

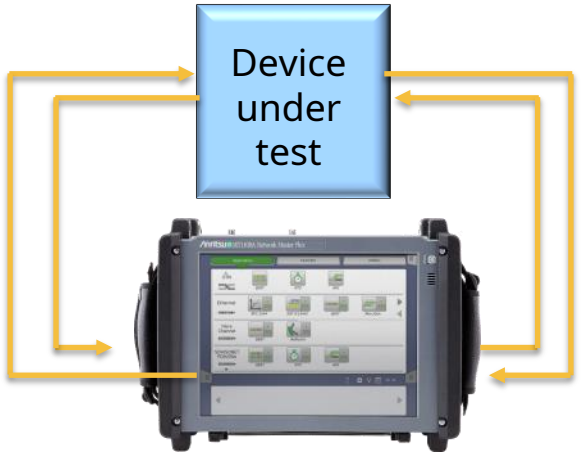
*1 Requires 10 Gbps dual-port option

RS-FEC for 100GBASE-SR4 (MU110013A-023)

Back to Index page

- Added RS-FEC function*1 to MU110013A
  Generate and Measure FEC 100GbE signal
  Supports FEC Code: RS (528, 514, 7, 10)
  - Dual-Port Test: DUT Insertion Test*2
  - Single-Port Test: 100GigE+RS-FEC Confirmation/BER Test
    RS-FEC Error Correction Check
- Set RS-FEC for either CFP2 or QSFP28*3



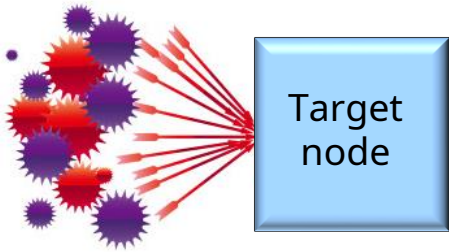


*1 Operation Results: 100GBASE-SR4, 100GBASE-ER4-lite
*2 Requires Dual-Port Option
*3 Add PCS Error/Alarm and PCS skew selection when RS-FEC enabled

MT1100A IP Channel Statistics (up to 10 Gbps)

Back to Index page

- IP Channel Statistics
  - Typical root causes of network issues
    - Top talker
      - Top talker occupies major bandwidth slowing it down
    - Network attack
      - One node accessed from many sites, occupying network
    - Error Frames
      - Error frames causes re-transmission and wasted network capacity



MT1100A IP Channel Statistics (up to 10 Gbps)

Back to Index page

- IP Channel Statistics
  - Finding top talker, network attack, and error frames quickly decreases downtime and recovers network performance
  - IP Channel Statistics offers simple method to " top talker, network attack, and error frames just by selecting and starting filters
  - Field technicians analyze network easily without training

Analysis	IP Channel Stats Filter
Top talker	Source IP address
Network attack	Destination IP address
Error frames	(any parameter OK)

MT1100A IP Channel Statistics (up to 10 Gbps)

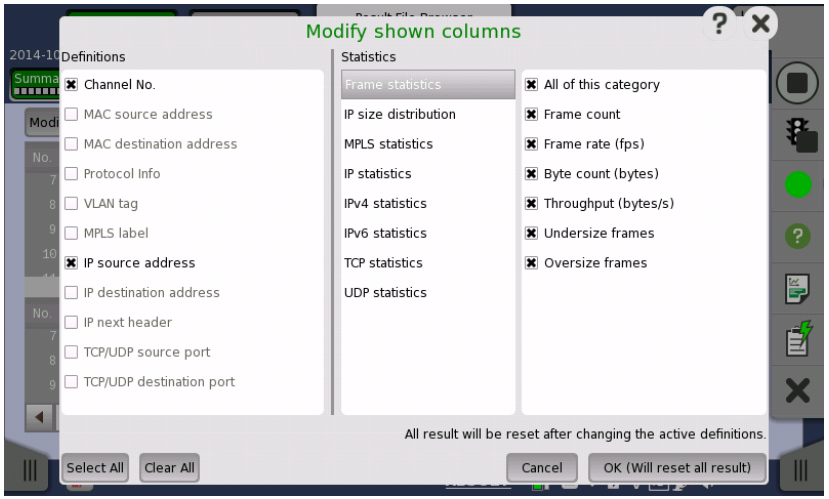
Back to Index page

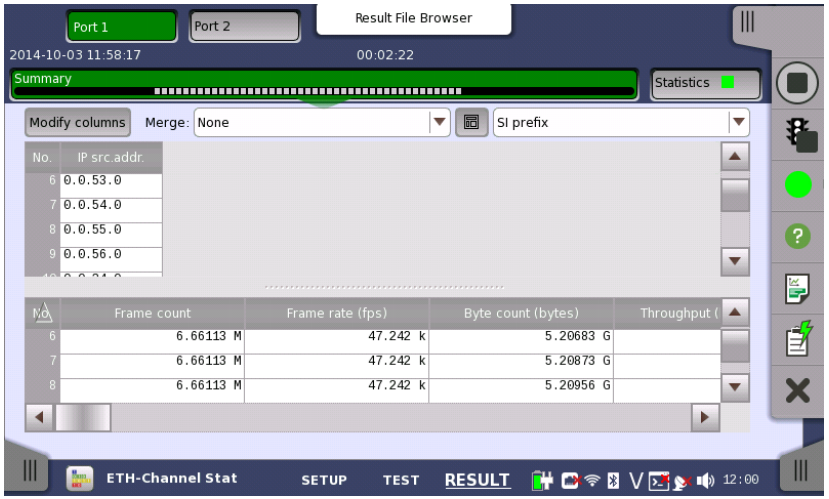
- IP Channel Statistics
  - Combination of filters
    - IPv4, IPv6 or MAC address, VLAN ID or MPLS label, IP next header (protocol), TCP/UDP ports
  - Monitoring values
    - Frame counts/rate, Throughput, Error frames, Size distribution, IPv4/IPv6 statistics, TCP/UDP statistics, etc.
  - Added value of IP Channel Statistics
    - VLAN scan
      - Throughput per VLAN ID monitored by selecting VLAN ID as filter

MT1100A IP Channel Statistics (up to 10 Gbps)

Back to Index page

- Setup screen for configuring channel definitions and displayed columns
- Result screen
  - Easy switching between results from two ports

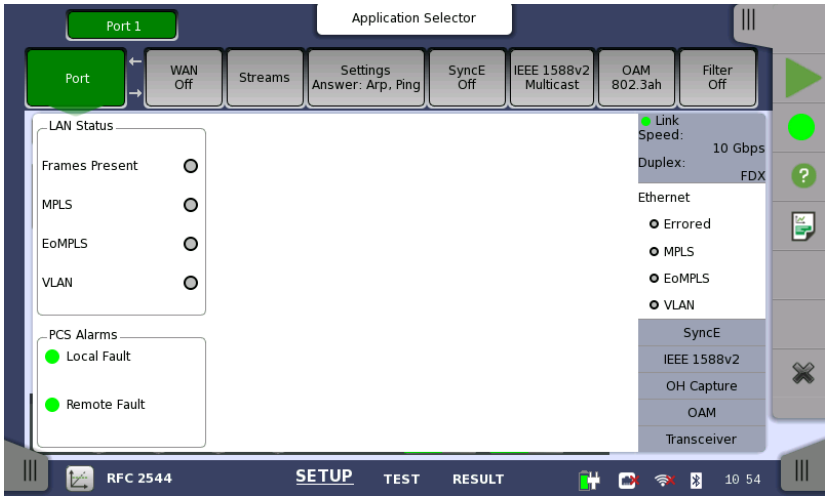


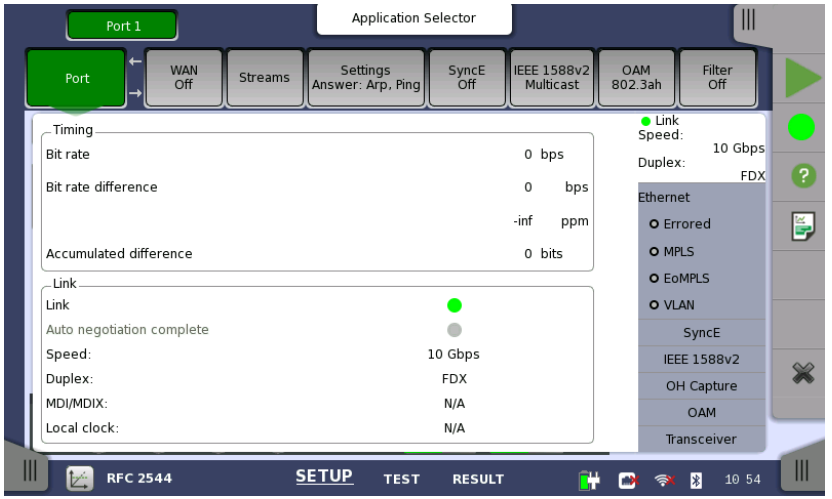


MT1100A Ethernet Line Status

Back to Index page

- Line alarms as LED indicators
- Displays current line status

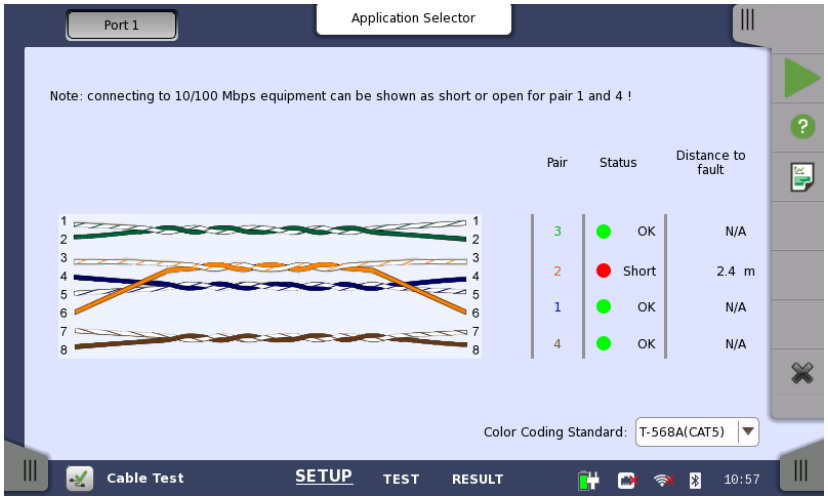




MT1100A Cable Test for Electrical Ethernet

Back to Index page

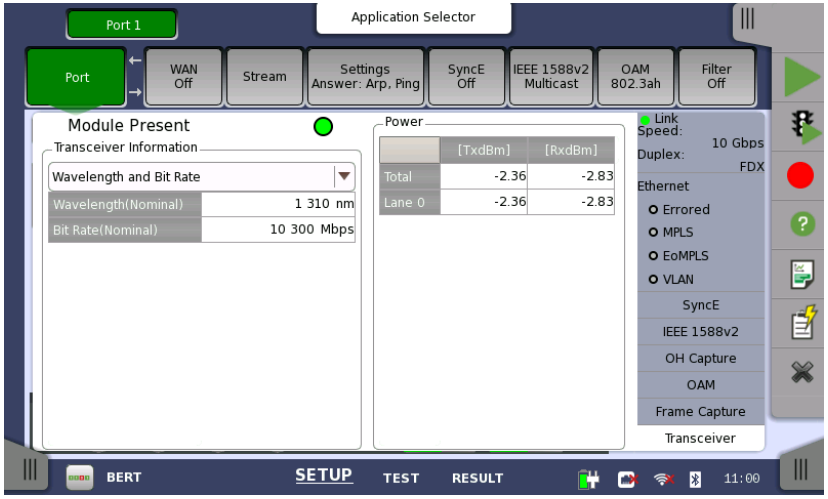
- Some problems on electrical Ethernet are basic:
  - Short in wire pair
  - Break in wire pair
- Cable test easily identifies such basic problems
- Cable test displays distance from instrument to fault



MT1100A Signal Level Display for Optical Ethernet

Back to Index page

- Some problems on optical Ethernet connection are basic:
  - Bent cables
  - Breaks in cable
  - Dirty connectors
- Optical signal level display easily identifies such problems



MT1100A Service Activation Test

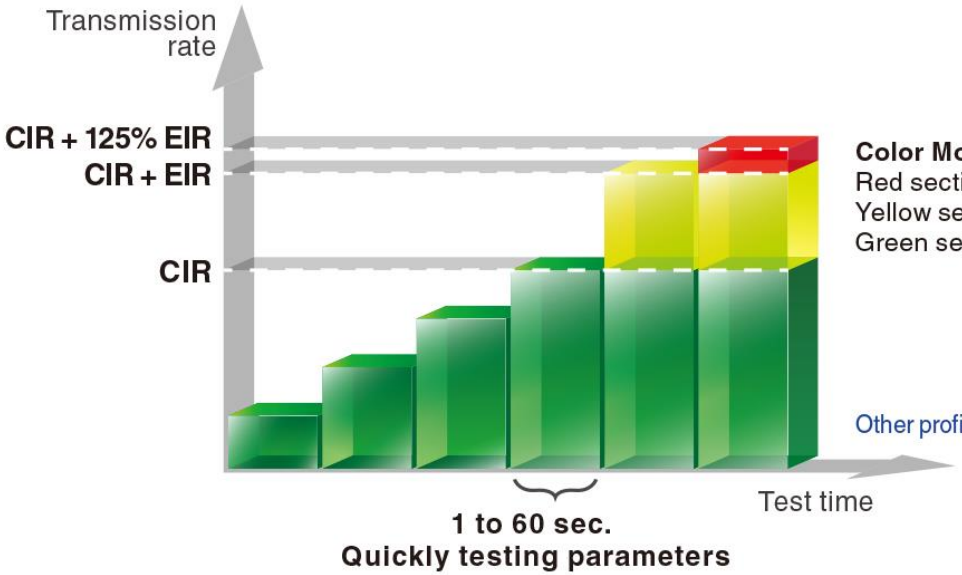
Back to Index page

- What is ITU-T Y.1564?
  - Anritsu actively involved in creating Y.1564 standard
  - Defines new method for testing multiple Ethernet services on network simultaneously
  - Designed to allow service providers to assess customer end-to-end network performance including:
    - End user traffic profiles with multiple frame sizes
    - Services with different traffic priorities on network
  - Verifies following for each surface:
    - Frame Loss, transfer time and jitter across network
    - Policing
    - Network ability to manage short-duration traffic bursts

MT1100A Service Activation Test

Back to Index page

- What is ITU-T Y.1564?
  - ITU-T Y.1564 completes testing in two phases:
    - Phase 1: Service Configuration Test—confirms each service configured correctly throughout network at Committed Information Rate (CIR), and others rates as required
    - Tests one service at a time

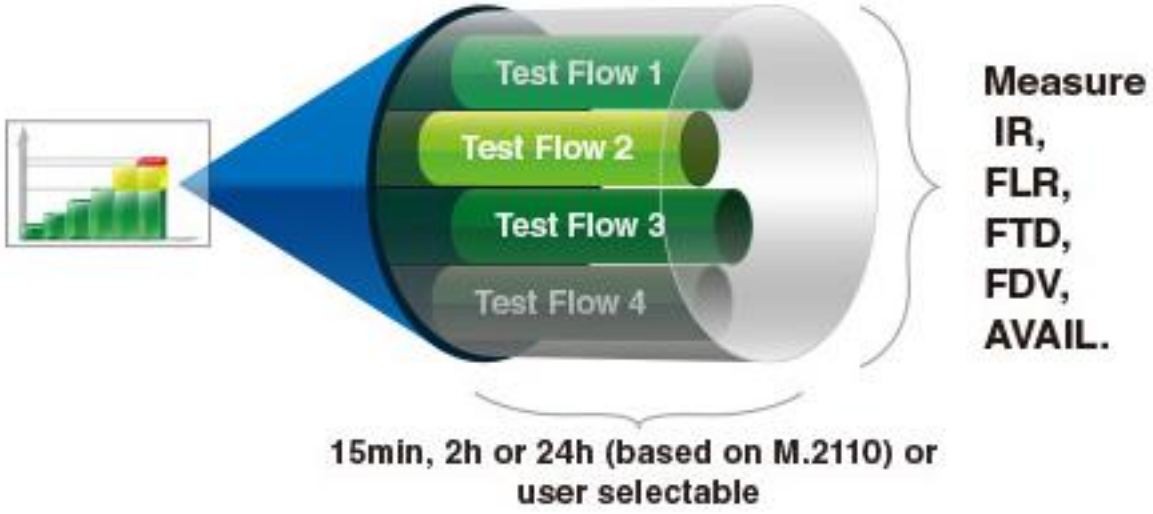


Color Mode
Red section : Confirm traffic dropped when policing is applied
Yellow section : Non guaranteed traffic
Green section : Guaranteed traffic;
Service Acceptance Criteria (SAC) on
Frame Loss Ratio (FLR),
Frame Transfer Delay (FTD),
Frame Delay Variation (FDV) and Availability (AVAIL) are verified.
Other profile parameters : Committed Burst Size (CBS) Excess Burst Size (EBS)

MT1100A Service Activation Test

Back to Index page

- What is ITU-T Y.1564?
  - ITU-T Y.1564 completes testing in two phases:
    - Phase 2: Service Performance Test—Transmits one or many services simultaneously at CIR confirming all traffic can transverse network under full service load
    - Default test time: 15 minutes, 2 hours, or 24 hours



MT1100A Service Activation Test

Back to Index page

- What is ITU-T Y.1564?
  - Test configurations:
    - One-way test, using two testers
      - Provides individual results for each direction
      - “Preferred configuration” in Y.1564
      - How to synchronize two instruments to test one-way FTD (Frame Transfer Delay) is an issue.

    - Round-trip test
      - FDV (Frame Delay Variation) may be irrelevant

MT1100A Service Activation Test

Back to Index page

- What is ITU-T Y.1564?
  - RFC 2544 often used for Service Activation Test
    - Not intended use for RFC 2544:
      - "Benchmarking Methodology for Network Interconnect Devices"
      - Defines number of tests used for describing performance characteristics of network devices
  - Y.1564 intended for Service Activation Test

Item	ITU-T Y.1564	RFC 2544
Designed for	Service activation	Device performance
Concurrent services	Multiple services simultaneously	One service at a time
Simulates	Realistic network	One service on network
Testing time	Short due to simultaneous testing of services	Long due to sequential test of parameters and services
Test result	Directly related to SLA requirements	Link performance limit

MT1100A Service Activation Test

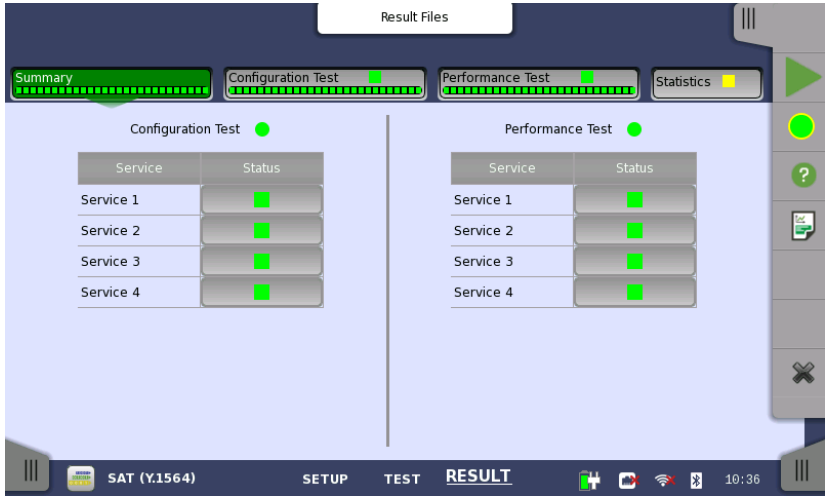
Back to Index page

- Supports tests specified in Y.1564
- Features:
  - Two-step test based on:
    - Bandwidth profile parameters: CIR, EIR, CBS, EBS
    - Performance parameters: FTD, FDV, FLR, AVAIL
  - Includes support for CM (”Color Aware”) and EMIX
  - Local–Remote operation
    - One-way test results using two MT1100A units
    - GPS add-on option for one-way FTD measurements
  - Round-trip measurements

MT1100A Service Activation Test

Back to Index page

- Results
  - On instrument display
    - Easy-to-understand GO/NO GO display
    - Full result details also available
  - As pdf reports



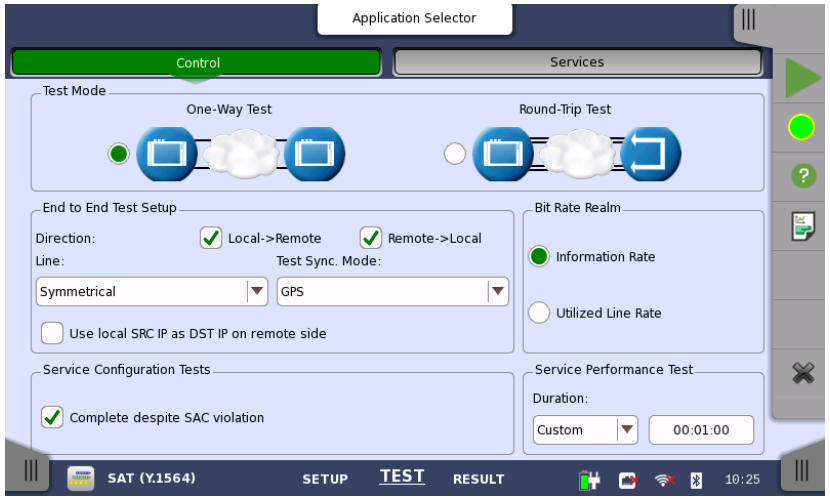
Result Summary

Result Details

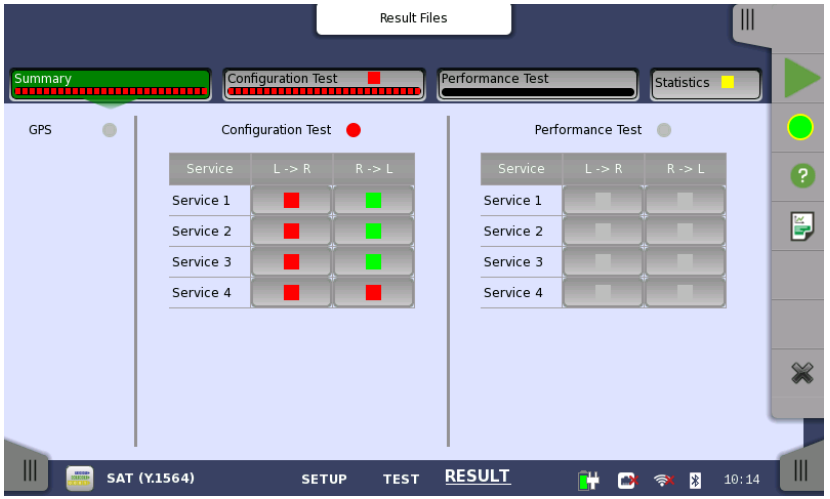
MT1100A Service Activation Test

Back to Index page

- Setup of overall test conditions
  - Display results from local and remote instruments on local instrument when one-way test (using two instruments) selected



Test Setup

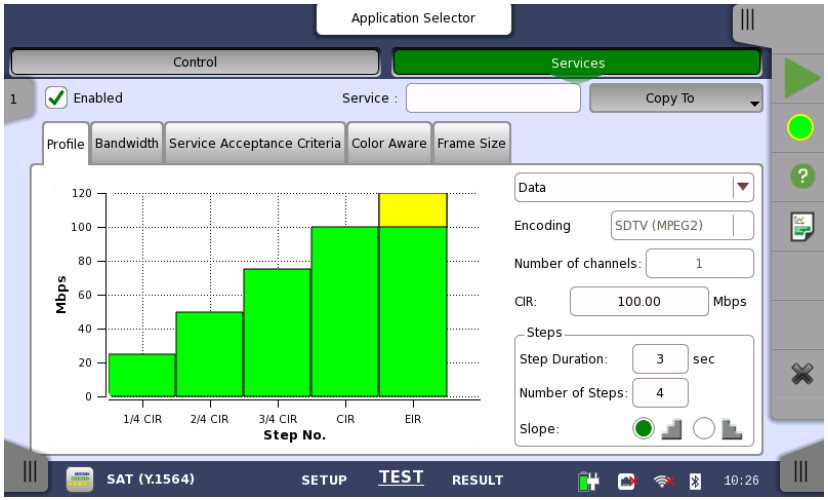


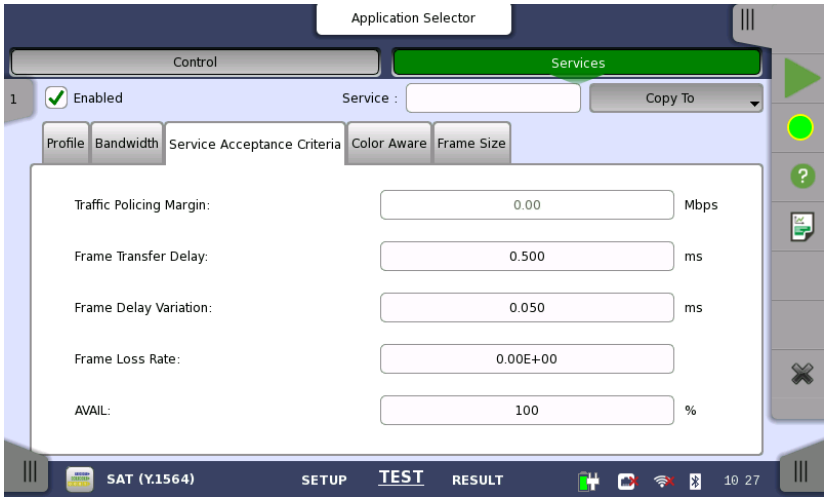
Result Summary on Local Instrument after Test

MT1100A Service Activation Test

Back to Index page

- Setup of each service
  - Graphical presentation of traffic profile for easy overview
  - Full flexibility in programming parameters

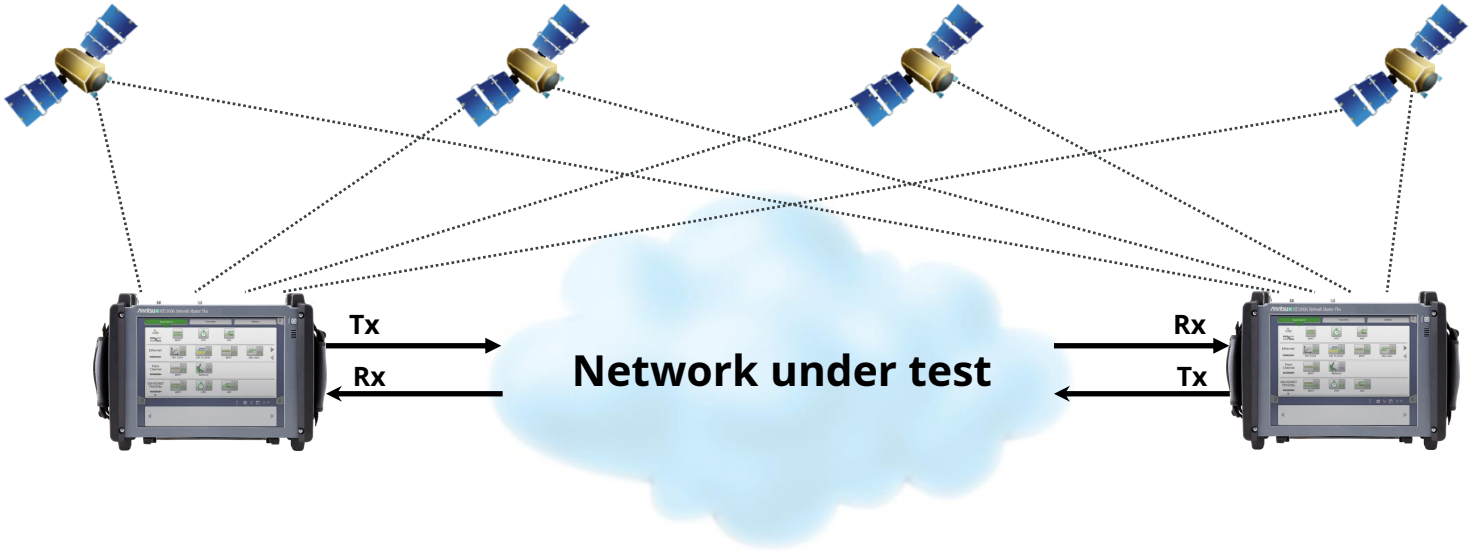




MT1100A Service Activation Test

Back to Index page

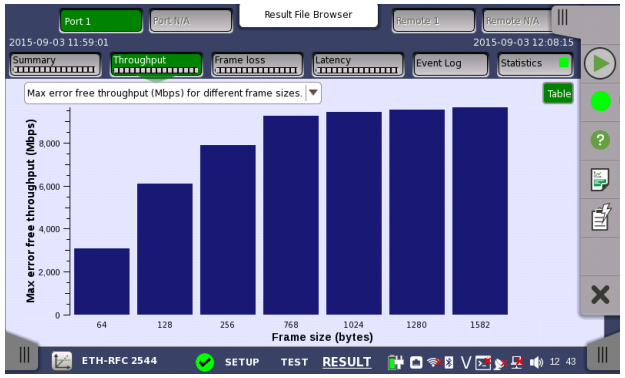
- GPS synchronization
  - Accurate information on one-way FTD with GPS synchronization option
    - Once synchronized, MT1100A holds synchronization for period of time
      - Relevant when difficult to get GPS signals at test site



MT1100A RFC 2544 Analysis

Back to Index page

- ETF RFC 2544 “Benchmarking Methodology for Network Interconnect Devices”
  - Defines number of tests used to describe performance characteristics of network devices
  - Throughput — for selected layer
  - Frame Loss
  - Latency
  - Packet jitter
  - Burstability
- Easy-to-interpret graphs
- Full-detail tables

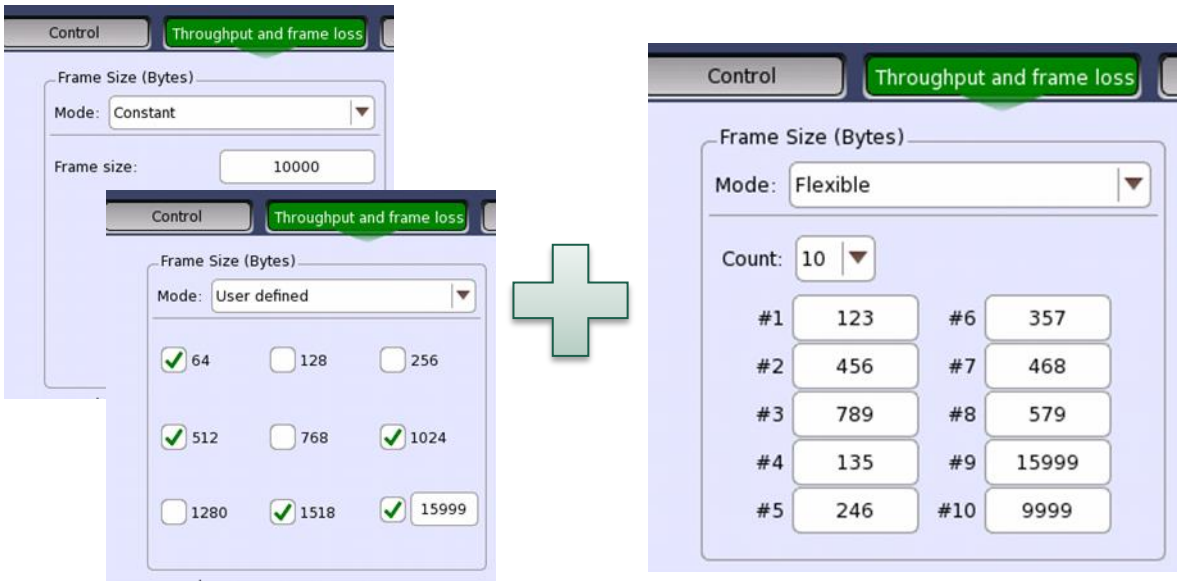


Graphs are bar graphs with legends (where applicable), giving users a better overview of results

RFC 2544 tables fit the screen width - no need for horizontal scrolling

MT1100A RFC 2544 Analysis

Back to Index page



- 10 Types Max.
- Setting range of 50 ~ 16000 bytes
- Ideal for Latency and Burst measurements

Can flexibly measure multiple Frame sizes with one sequence to check device-unique properties for Frame-size related specifications, such as Maximum Transmission Unit (MTU), etc., to support easy Boundary Testing of Frame size-dependent properties.

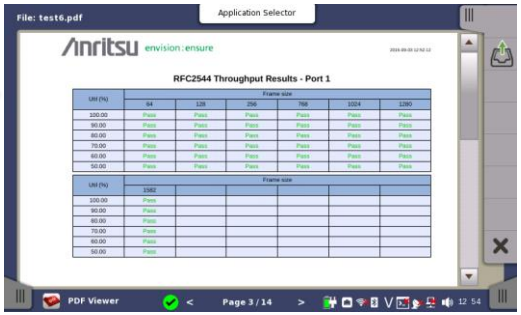
Useful Point !

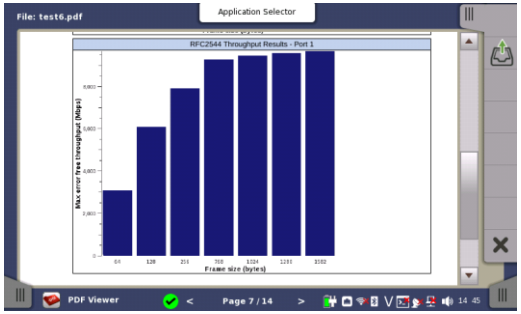
Although only one size can be measured in the Constant mode, measuring multiple sizes shortens the measurement time and simplifies comparison of measurement results between sizes.

MT1100A RFC 2544 Reporting

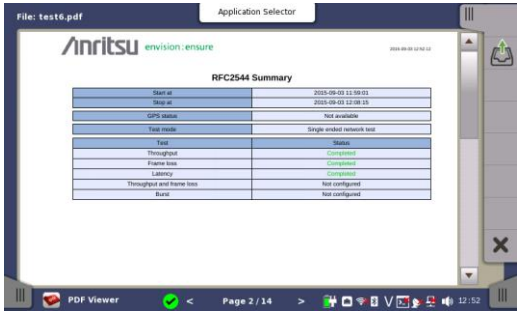
Back to Index page

- Report tables are organized like the GUI with Tx row followed by Rx row, making it easy to find faulty test areas with Frame loss.
  - New tables display per-port test results before actual results tables.
    Users can quickly identify combinations of Frame sizes and utilizations with problems.





RFC 2544 graphs same as GUI



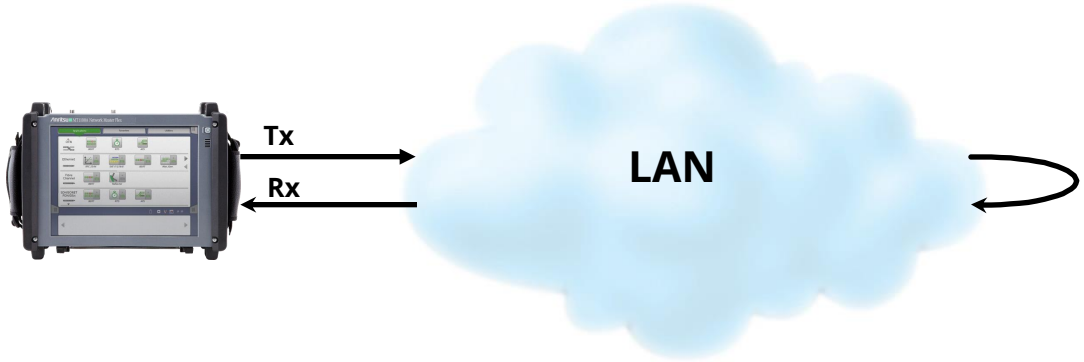
PDF reports are displayed with the built-in PDF viewer

RFC2544 Summary section with new table showing which tests completed

Benefit of RFC 2544 End-to-End Test

Back to Index page

- Typical test set-up with one instrument and reflector or loop-back OK for symmetrical links:



- For Ethernet links carried over asymmetrical connections (xDSL, WIMAX) throughput tests only reflect performance of link direction with lowest capacity
- Symmetrical typical test set-up does not identify transmission performance differences between two link directions

MT1100A RFC 2544 End-to-End Test

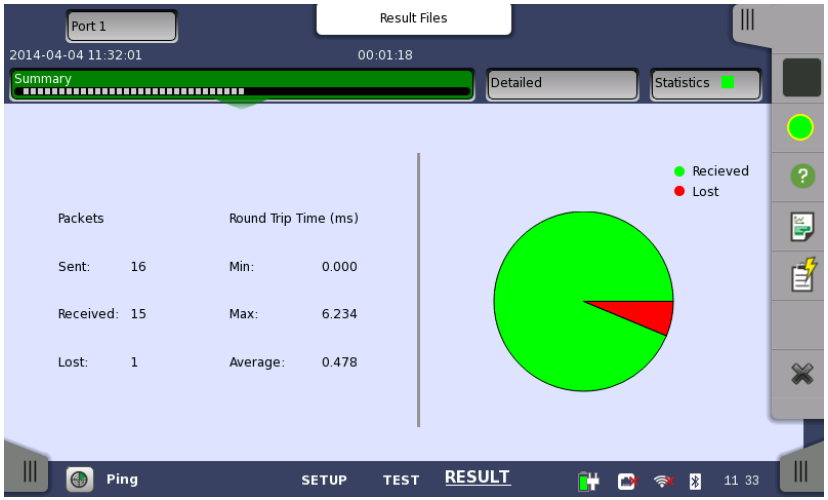
Back to Index page

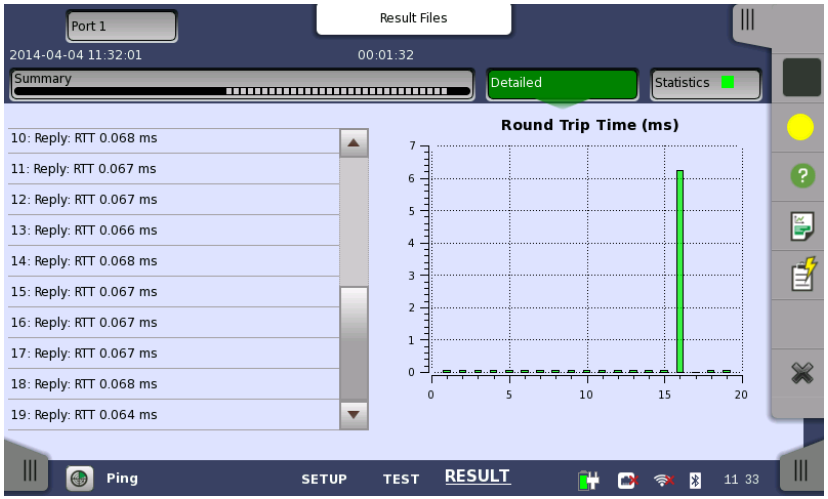
- RFC 2544 end-to-end test with Local–Remote relationship
  - Needed for test of Ethernet links over asymmetrical connections
  - Identifies transmission performance differences between two directions in link
  - User sets test at local master instrument which exchanges set-up and results with remote slave instrument
  - Tests Throughput, Frame Loss and Burstability
  - Tests two lines simultaneously

MT1100A Ethernet Ping Test

Back to Index page

- Ping test applications:
  - Installation and commissioning
  - Troubleshooting and maintenance
- Popular tool for testing:
  - Continuity
  - Connectivity
  - Response time

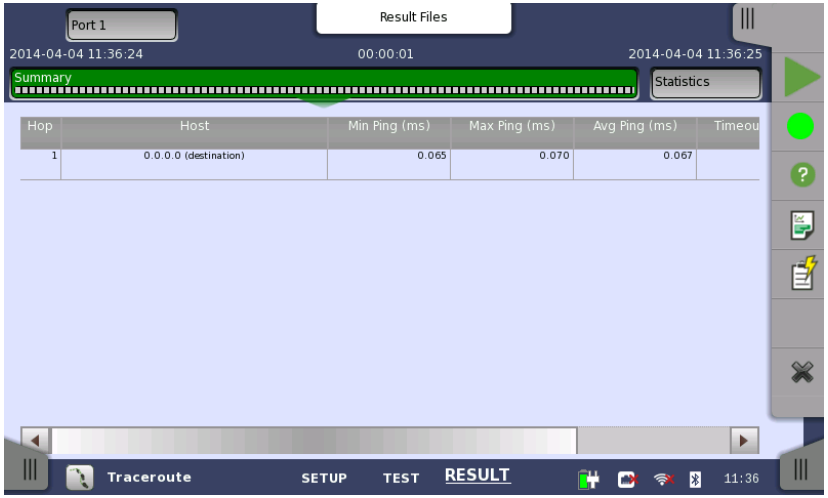


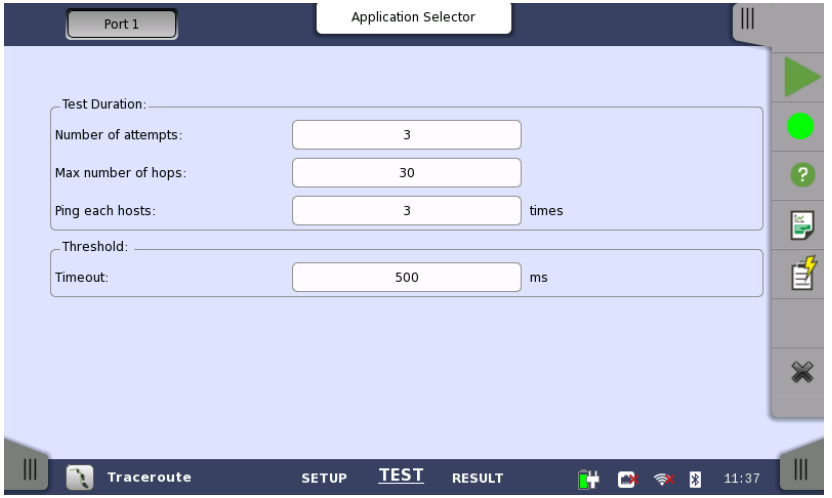


MT1100A Ethernet Traceroute Test

Back to Index page

- Traces IP route over IP network
- Ping timing data per hop

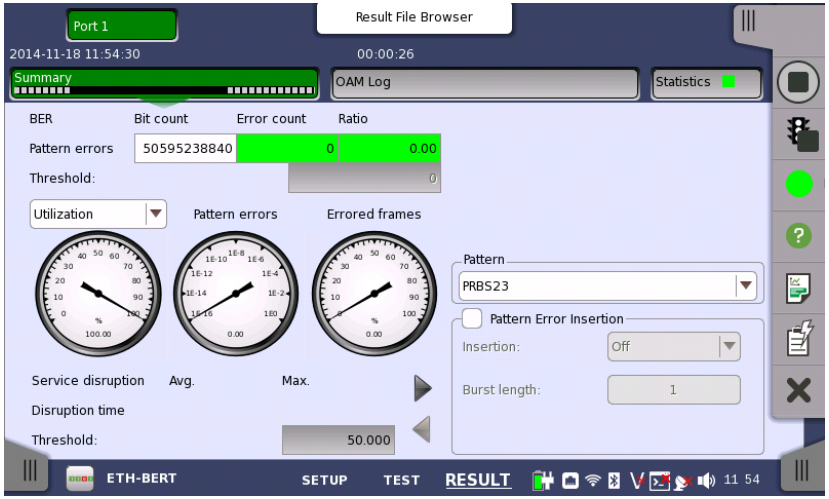


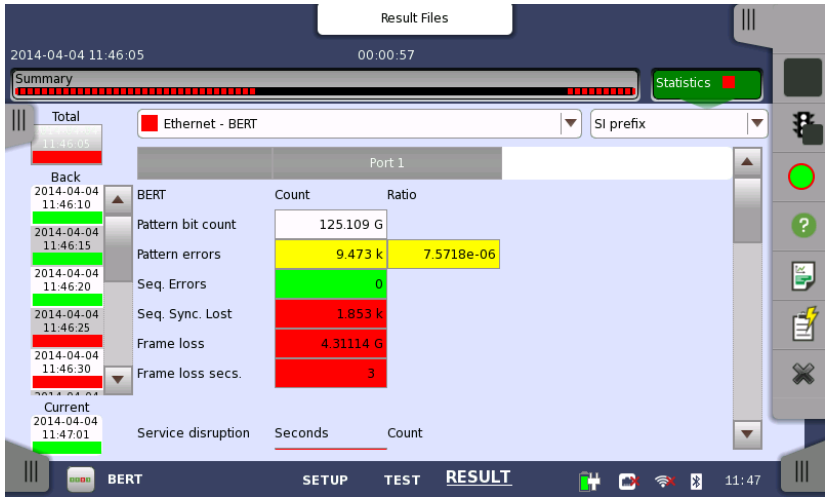


MT1100A Ethernet BER Tests

Back to Index page

- Traditional test of physical connection
- Generates and detects test patterns
- Counts errors in received test pattern
- Color-coded errors and alarms for easy overview
- Pattern generation:
  - Unframed
  - Layer 2 (Mac address)
  - Layer 3 (with IP header)
  - Layer 4 (with UDP/TCP header)
- Detects sequence errors and loss of sequence synchronization
- Frame loss count and frame loss seconds





MT1100A BER Tests

Back to Index page

- Layered Throughput analysis

Frame representation	Throughput Calculation
IFG | Pre-amble | MAC header | MPLS (opt) | EoMPLS (opt) | VLAN (opt) | LLC (opt) | SNAP (opt) | IP head | UDP TCP | PAYLOAD | CRC	Data layer

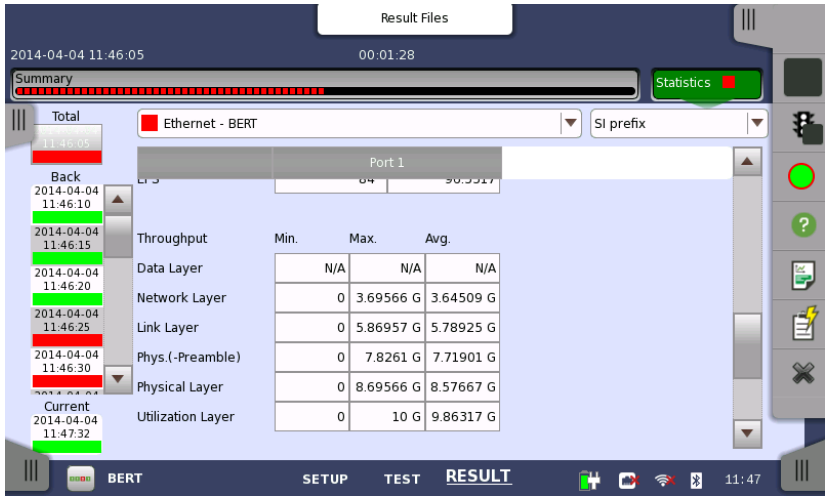
min. IFG | Pre-amble | MAC header | MPLS (opt) | EoMPLS (opt) | VLAN (opt) | LLC (opt) | SNAP (opt) | IP head | UDP TCP | PAYLOAD | CRC	Utilization layer
CMA 3000 frame size (does not include Preamble) Area included in throughput calculation min. IFG | Area included in utilization calculation	Frame information



Why Service Disruption on Ethernet Links?

Back to Index page

- Many Ethernet links carried over OTN/SDH/SONET via backbone network
  - OTN/SDH/SONET networks sometimes have Automatic Protection Switching (APS)
  - If OTN/SDH/SONET network line fails, APS switches traffic to working line
  - Switch and service disruption should be completed in less than 50 ms

MT1100A Service Disruption Measurement

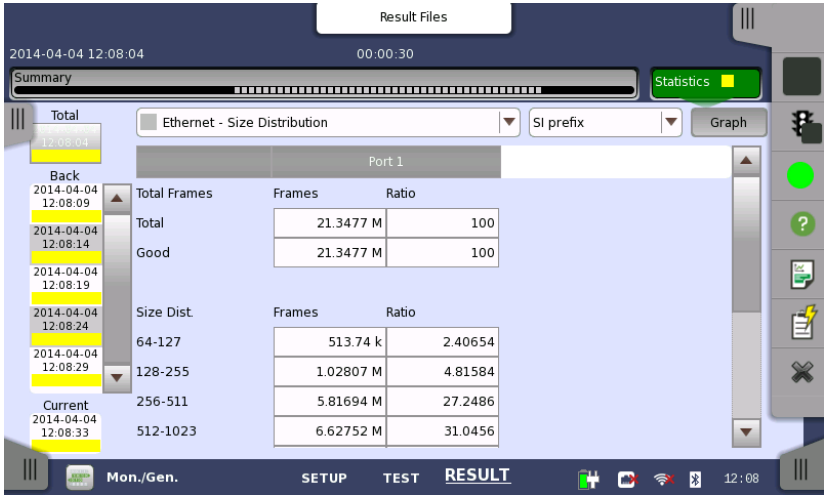
Back to Index page

- Service disruption can be measured as part of BER test
  - Using far-end loopback or two MT1100A testers
  - Max. acceptable service disruption time can be set
    - Color-coded results when max. time exceeded

MT1100A Ethernet Signal Analysis

Back to Index page

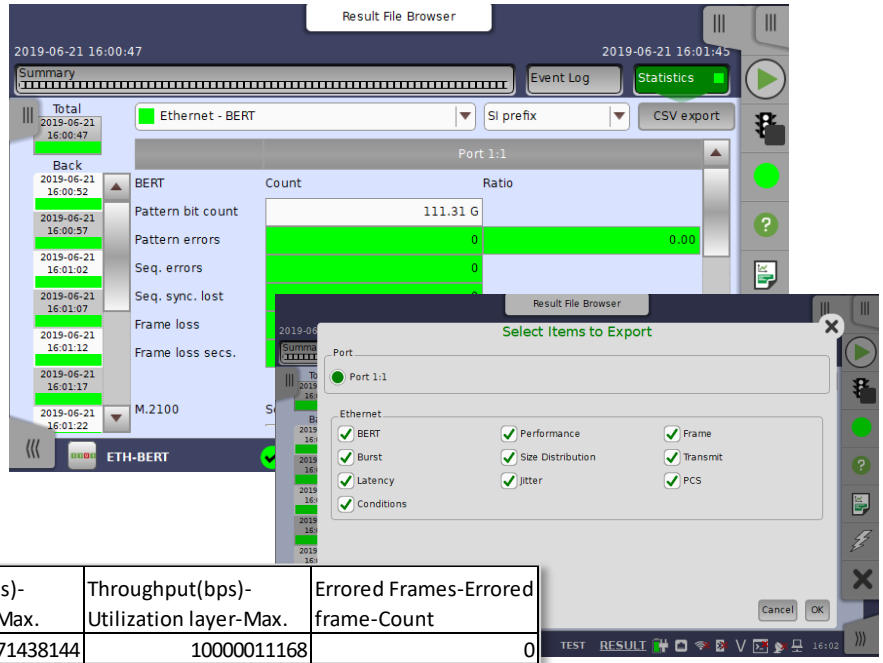
- Frame performance
- Frame type statistics
- Frame size distribution statistics
- Burst statistics
- Transmit statistics
- Full-detail tables
- User-defined thresholds to highlight problems



MT1100A Ethernet Statistics Export

Back to Index page

- Export all Ethernet Statistics per interval setting 1, 2, 5 sec etc.
- Select required sections to export into CSV format
- Open CSV file in Excel (or other)
- Analyze stat's for required data
- Graph statistical results
- Graph and compare different results over time



date/time	Relative time	Throughput(bps)-Link layer-Max.	Throughput(bps)-Phys.(-preamble)-Max.	Throughput(bps)-Physical layer-Max.	Throughput(bps)-Utilization layer-Max.	Errored Frames-Errored frame-Count

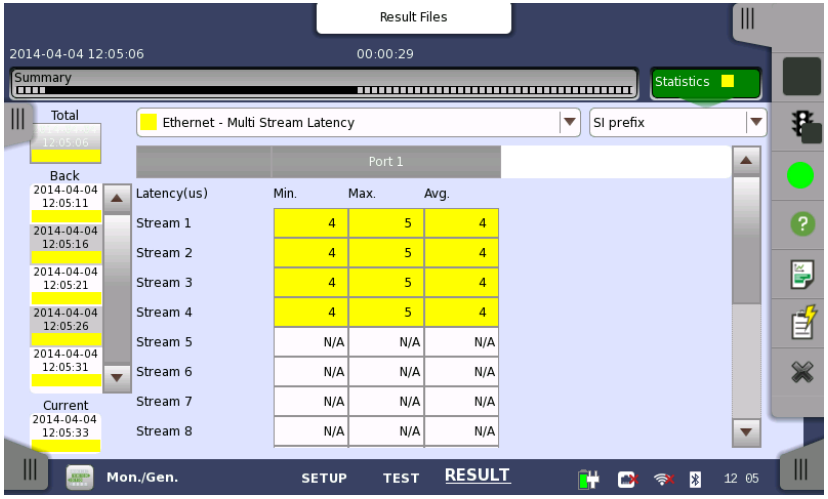
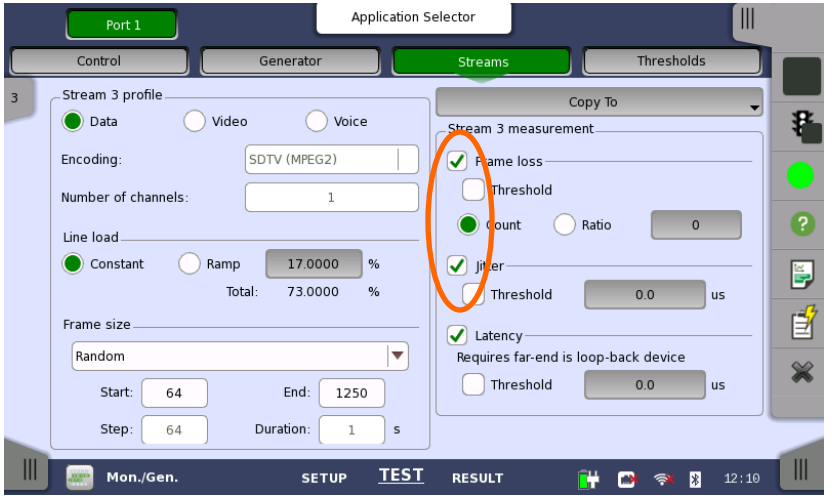
MT1100A Latency and Packet Jitter Measurements

Back to Index page

- Latency and packet jitter can cause problems for real-time services like VoIP
  - Part of statistical measurements
  - User selects included information

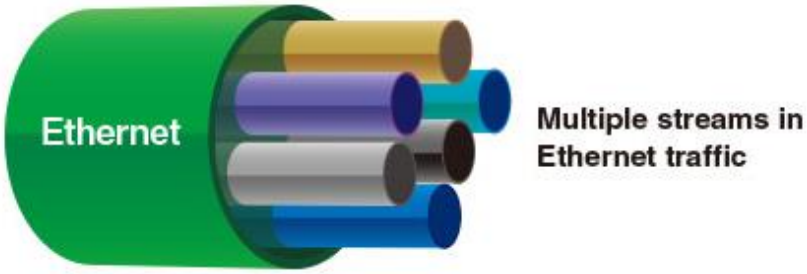




Benefit of Ethernet Multistream Test

Back to Index page

- By sending several traffic streams with different priority settings, the user can verify that high-priority traffic is transported better (i.e. has lower frame loss) through a congested network than low-priority traffic

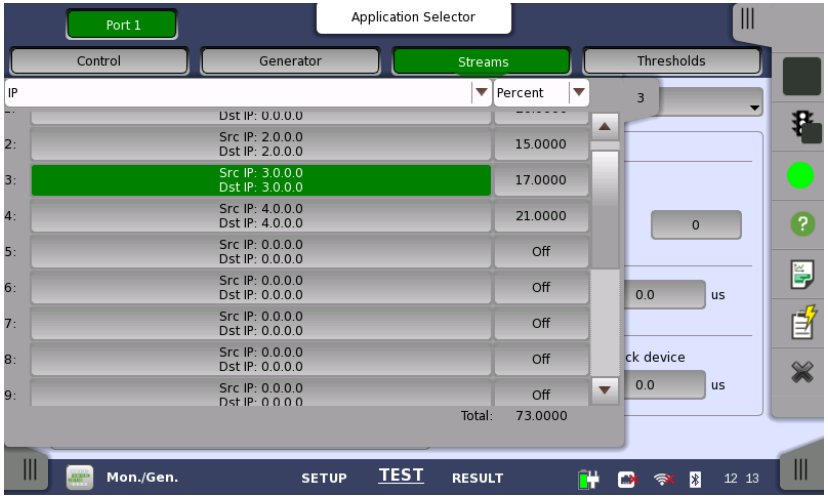


- VoIP traffic is often given high priority to ensure service quality
  - Sometimes DSCP/TOS byte used to give high priority
  - Other times high priority given to selected TCP/UDP ports
- Some operators allocate certain traffic capacity to each traffic type on link with limited capacity
- User can verify that each traffic types gets allocated capacity by sending several traffic streams with different type indications
  - Traffic type indicated by VLAN tags

MT1100A Ethernet Multistream Test

Back to Index page

- Using MT1100A, user can generate up to 16 streams per port on Ethernet link
  - Individual settings for traffic load and header information for streams, including DSCP/TOS byte and TCP/UDP port numbers for each stream

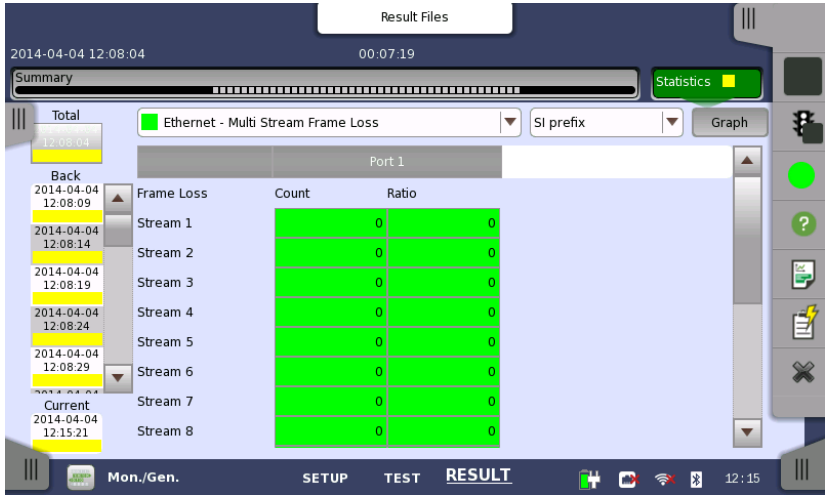


Stream Selector and Overview

MT1100A Ethernet Multistream Test

Back to Index page

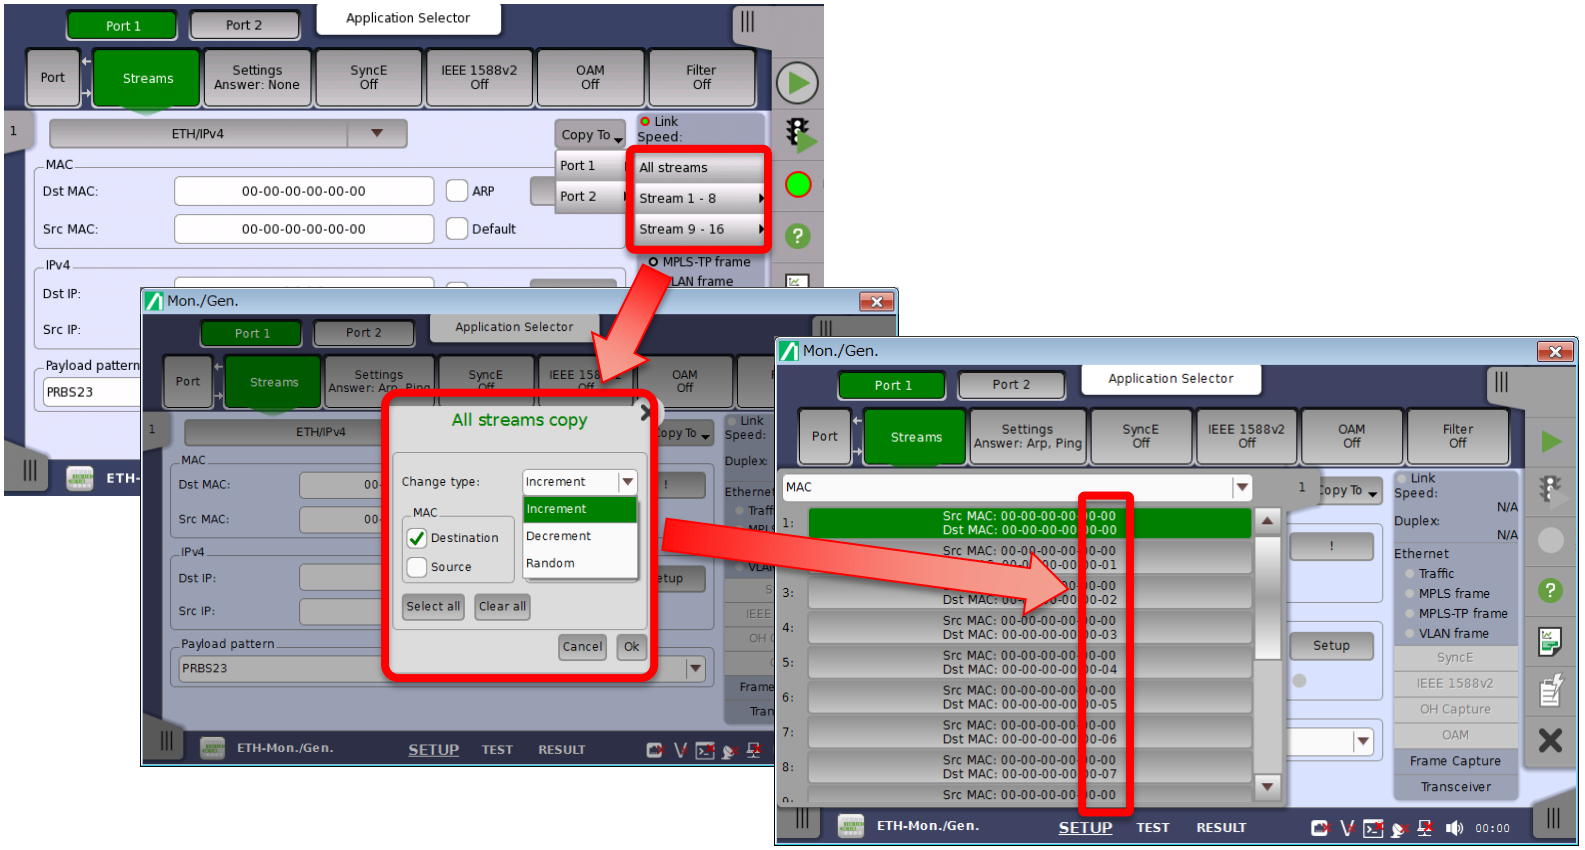
- Multistream function displays frame loss for up to 16 streams per port, making it easy to spot whether high-priority traffic has lower frame loss than low-priority traffic



Simple Stream Address Creation

Back to Index page

- When generating Ethernet and IPv4/v6 test Frames, a function supports creation of [Increment], [Decrement], and [Random] streams for the address specified location, resulting in shorter test setting times.



VLAN Background

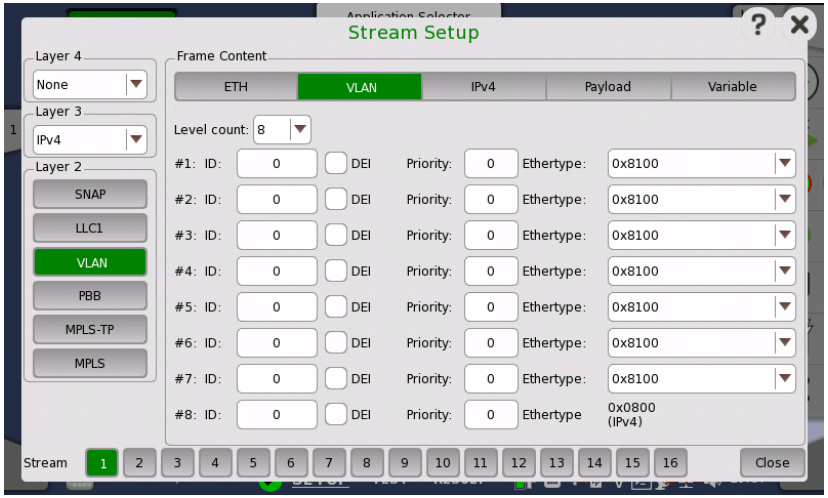
Back to Index page

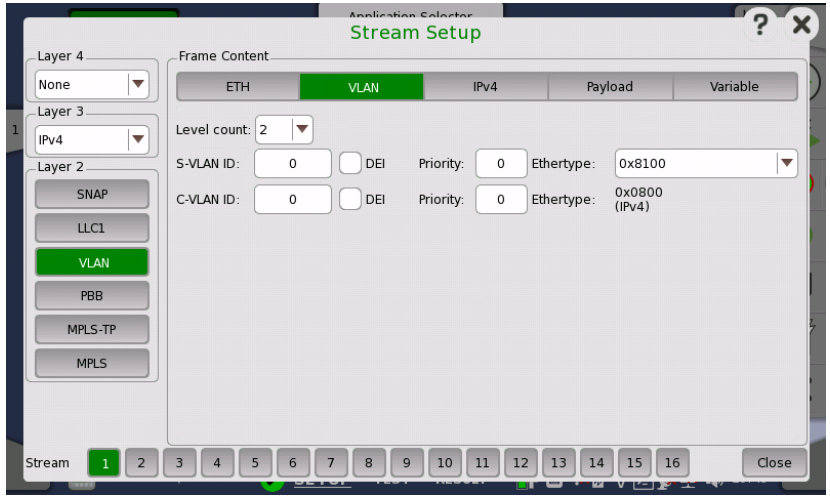
- Virtual Local Area Networks (VLANs) - IEEE 802.1Q
  - Segment LAN on organizational basis, by functions, project teams or applications
    - Each VLAN has ID and priority
      - 802.1p priority bits (3) segment traffic into eight Classes of Service (CoS), enabling traffic differentiation
      - 12-bit ID supports 4096 VLANs
- Stacked VLAN (“Q-in-Q”) IEEE 802.1ad
  - VLAN carried on VLAN
    - Method to provide more VLAN IDs
    - Allows service provider to carry customer VLAN traffic transparently service provider VLAN
    - Sometimes service provider and/or customer use more than one VLAN tag

MT1100A Ethernet Stacked VLAN Function

Back to Index page

- Insert up to eight layers of VLAN tags into Ethernet frame
  - Can be combined with Multistream function
  - Special layer naming when two layers selected
    - S-VLAN – Service provider VLAN
    - C-VLAN – Customer VLAN



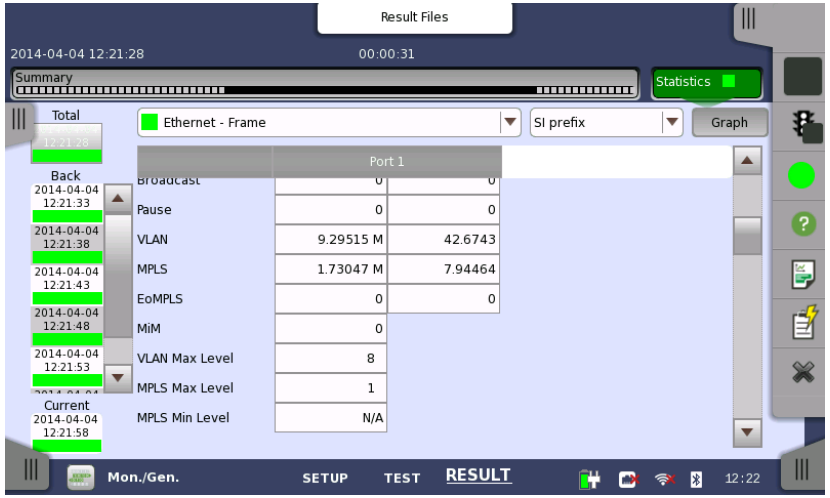


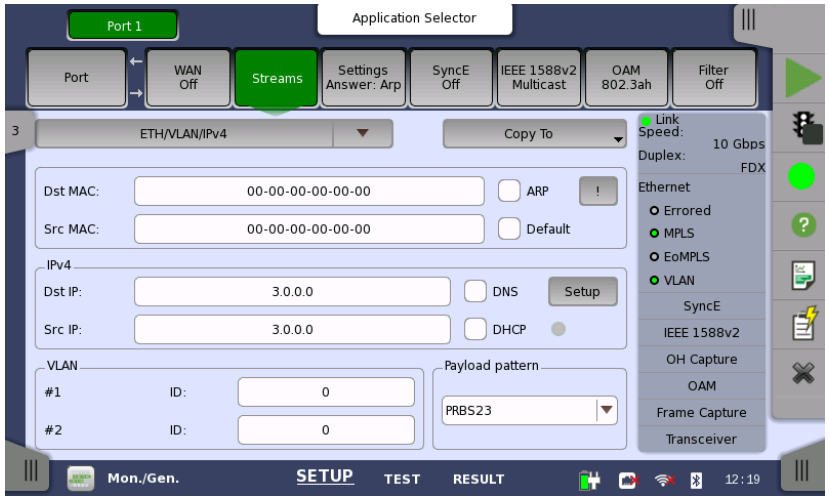
CFI bit renamed to DEI (Drop Eligible Indicator)

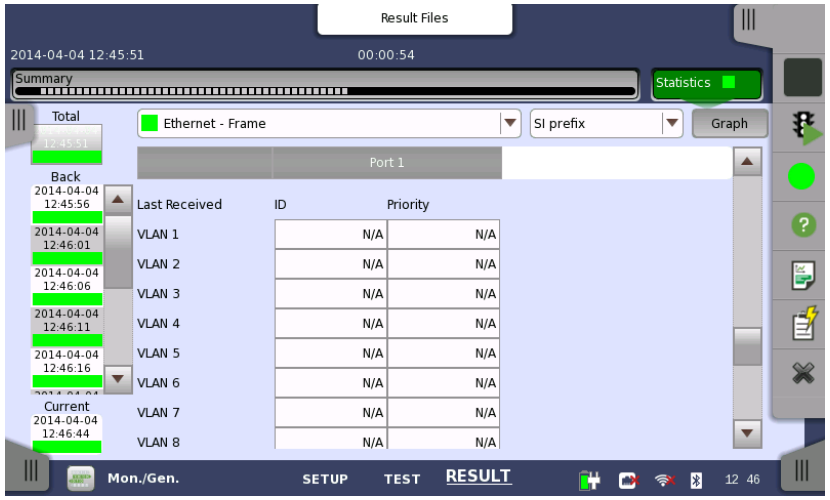
MT1100A Ethernet Stacked VLAN Function

Back to Index page

- VLAN information:
  - Indicates detected VLAN tagged frames in Status pane
  - Counts detected VLAN tagged frames and max. VLAN tag level in statistical measurements
  - Displays information on last received VLAN frame







MPLS Background

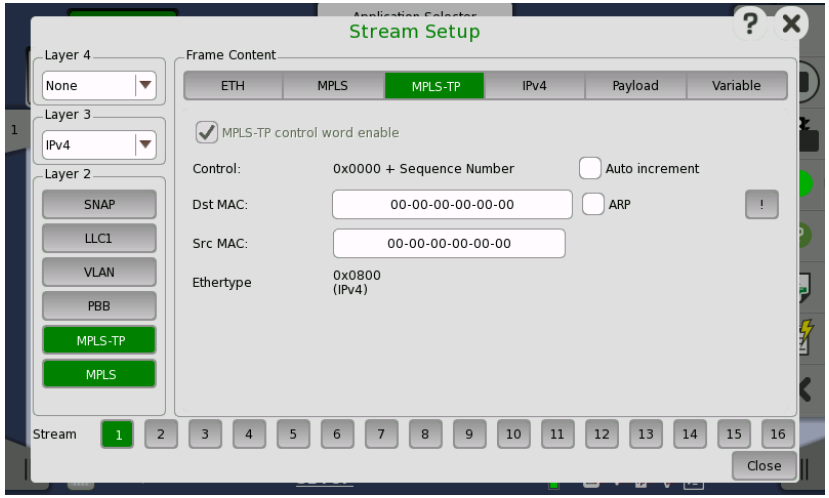
Back to Index page

- Multi-Protocol Label Switching (MPLS)
  - Carries data; considered to be between Layer 2 (Data Link Layer) and Layer 3 (Network Layer); often called "Layer 2.5“.
  - Simplifies point-to-point routing
    - MPLS header has one or more 'labels’ (label stack) and each label has four fields:
      - 20-bit label value
      - 3-bit field for QoS priority
      - 1-bit bottom of stack flag
      - 8-bit TTL (time to live) field
- EoMPLS (Ethernet over MPLS) or PWE3 (Pseudo Wire Emulation Edge-to-Edge)
  - Defines method to transport Layer 2 protocol across MPLS network

MT1100A MPLS/MPLS-TP Function

Back to Index page

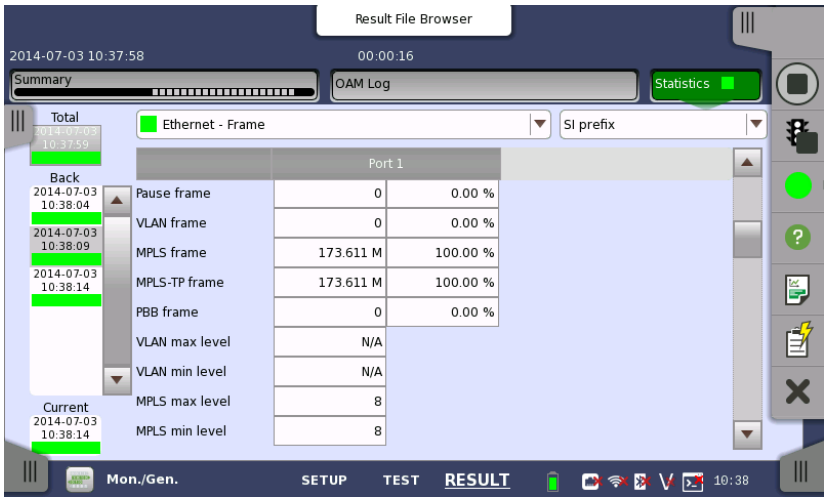
- Stacked MPLS generation
  - Inserts up to 8 layers of MPLS labels into Ethernet frame
  - Can be combined with Multistream facility
  - EoMPLS Control word can be added with MPLS-TP

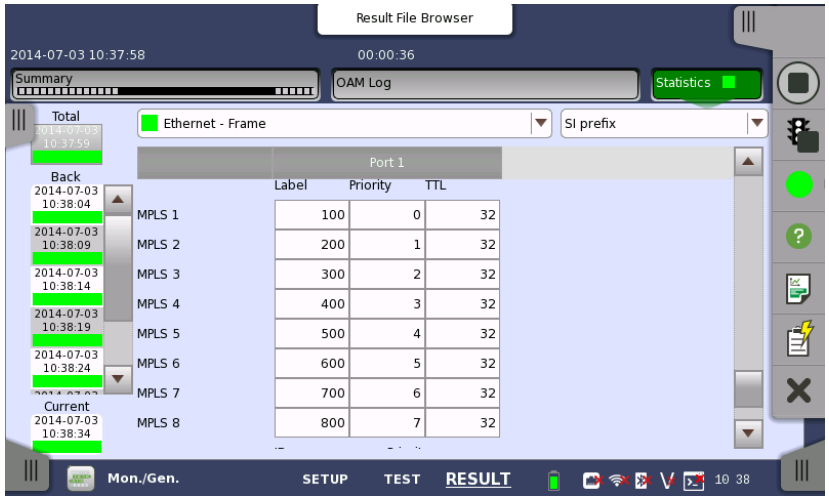


MT1100A MPLS/MPLS-TP Function

Back to Index page

- MPLS information:
  - Indicates detection of MPLS and EoMPLS frames in Status pane
  - Counts detected MPLS and MPLS-TP (EoMPLS) frames and max. MPLS layer
  - Displays information on latest received MPLS frames

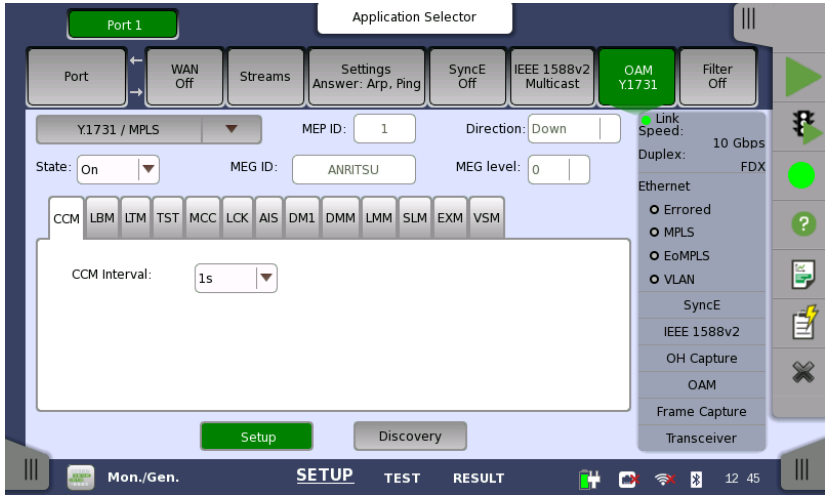




MT1100A MPLS-TP Function

Back to Index page

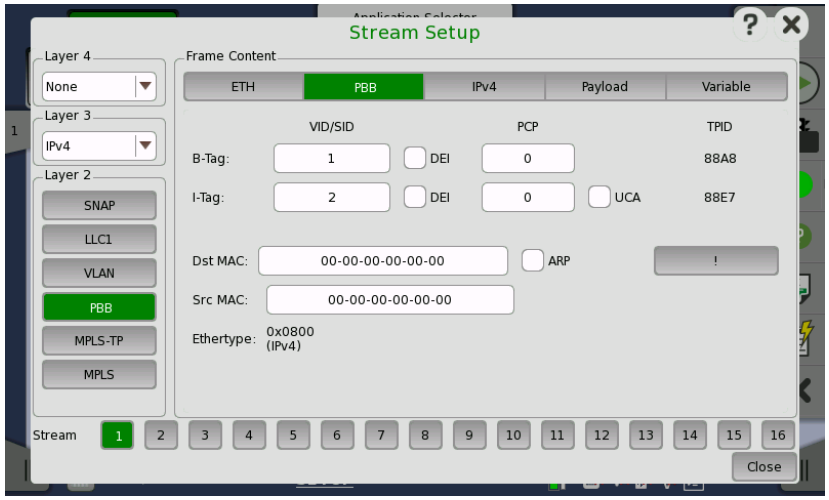
- MPLS-TP information:
  - Activation of MLPS-TP OAM function

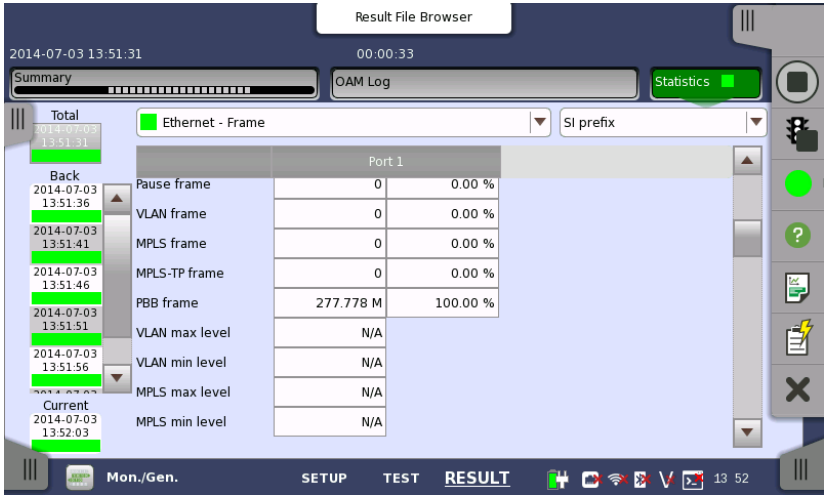


MT1100A PBB Function

Back to Index page

- PBB(Mac-in-Mac) information:
  - Counts PBB frames at result page
  - Can be combined with Multistream facility



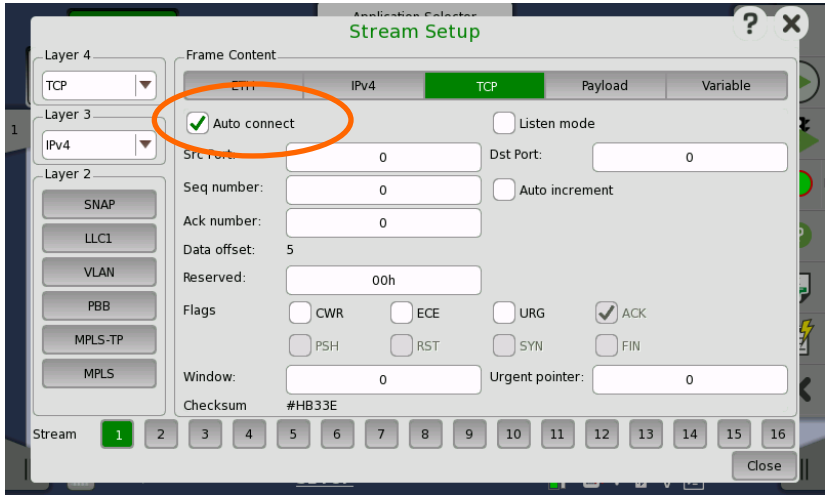


MT1100A TCP Function

Back to Index page

- Set TCP connections before sending traffic with TCP headers
  - Allows traffic to pass firewalls using “state-full inspection”
  - Limited implementation:
    For example:

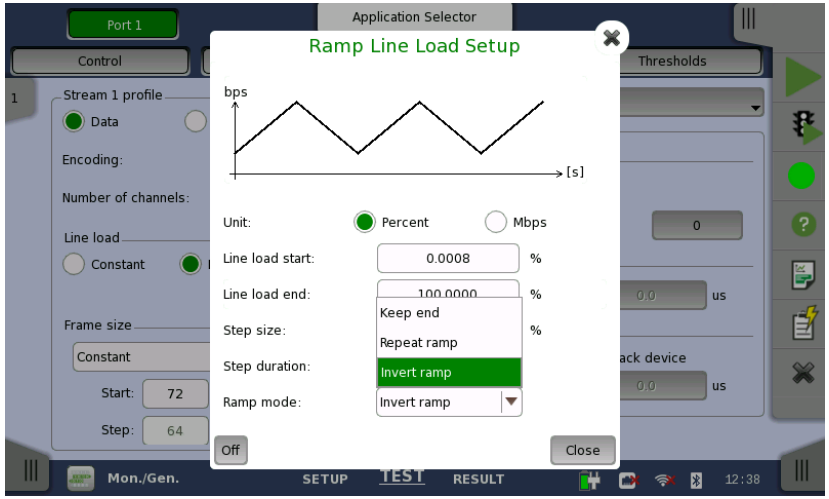
    No retransmissions
    No flow control

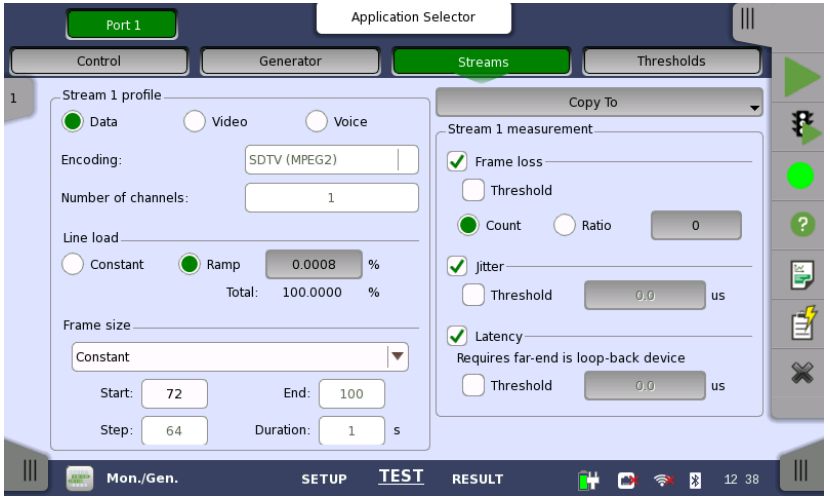


MT1100A Ethernet Traffic Generator

Back to Index page

- Ramp Traffic: Increases traffic automatically until maximum capacity exceeded
  - Program control for each stream
- Burst Traffic: Continuous sending at specified conditions
- Generate Tx rates above 100%
- Data type profiles (data, video, audio)

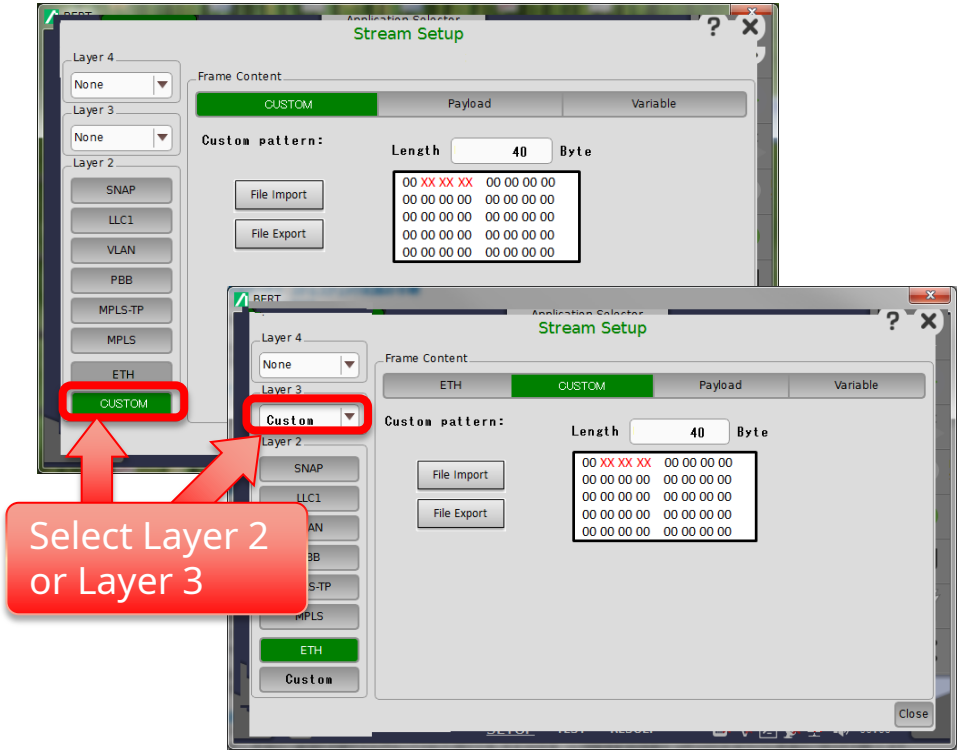




Custom Editing of Ethernet Header

Back to Index page

- Free editing of the Ethernet Header in the Frame stream settings to support special protocols for R&D.
  - This function can be used with the following applications:
    - Ethernet BERT Application



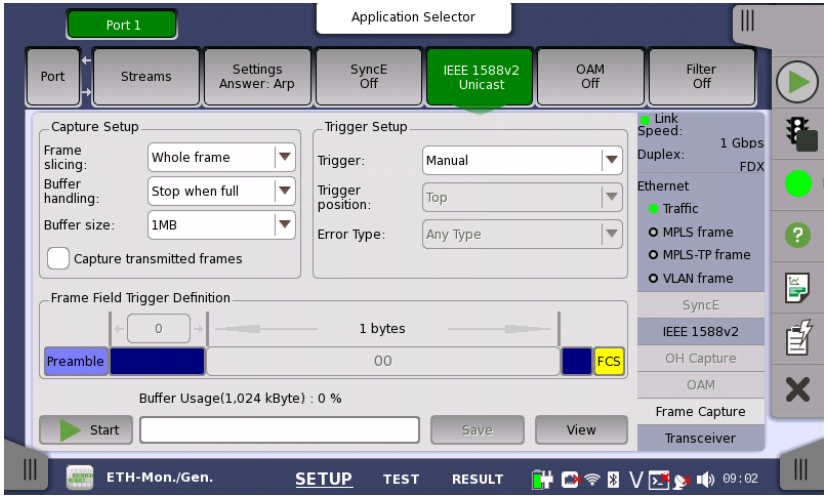
- ✓ Edit Custom header with text editor for Save and Load
- ✓ Supports Header lengths up to 256 bytes

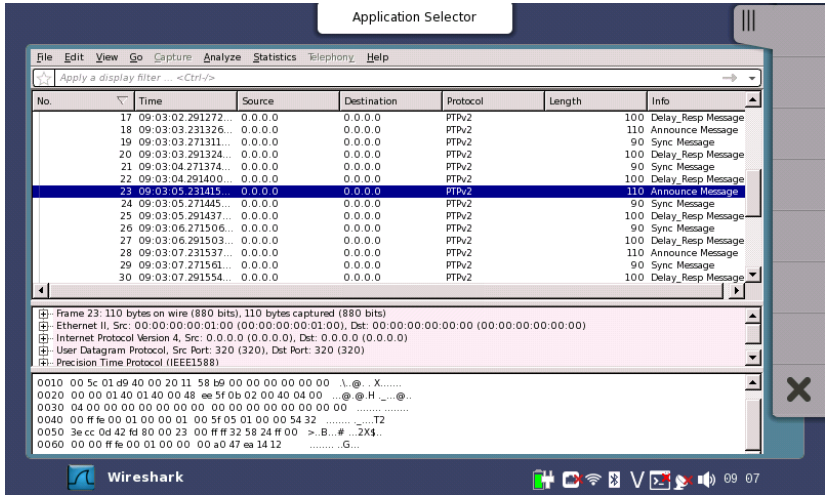
- ◆ The following restrictions apply:
  - "Ethernet over OTN" not supported
  - Rx filters other than Layer 2 not supported when using Layer 3 Custom headers
  - No Rx filters supported when using Layer 2 Custom headers
  - Arp/Ping functions not supported when using Layer 2/3 Custom headers

MT1100A Ethernet Frame Capture Function

Back to Index page

- Protocol analysis
  - For advanced Ethernet troubleshooting
  - Captures frames in live traffic of monitored line
  - Analyzes captured frames using Wireshark® protocol analysis software

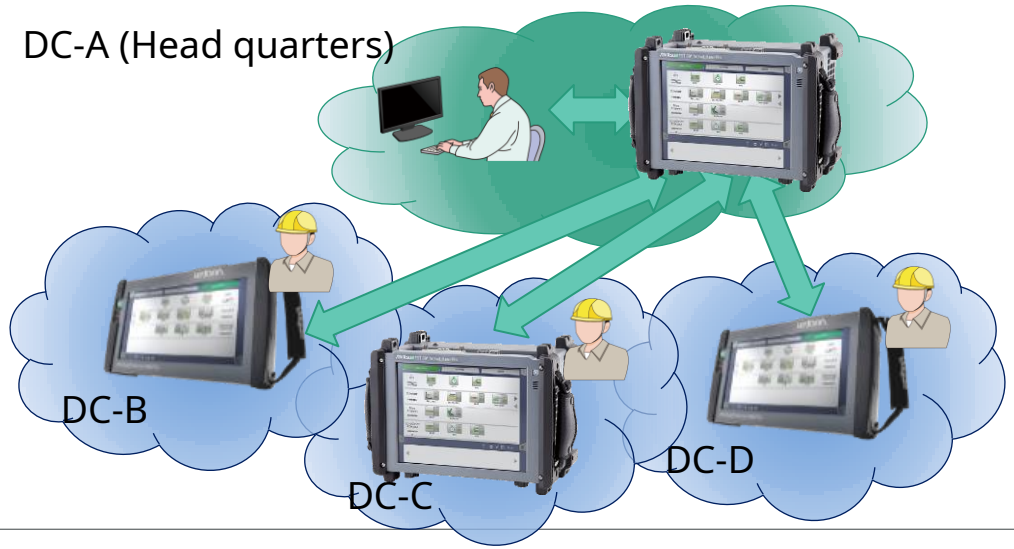




Network Discovery and In-band Control

Back to Index page

- No Need for Two Engineers for End-to-end Test
  - One engineer controls both local and remote testers without dedicated LAN for remote access
  - Testing from one end cuts OPEX
- Process
  - Discover other “Network Master(s)” on network
  - Remote-control far-end tests, such as RFC2544, Y.1564, Reflector (L2/L3/L4 loopback) etc.
  - Generate report at local controller with results summarized at both local and remote testers

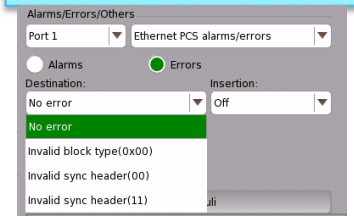


Validating PCS

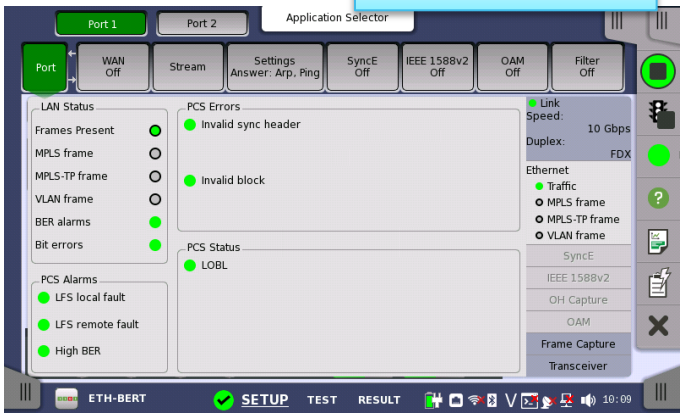
Back to Index page

- Validating PCS operation at the 10 GbE interface to support fast troubleshooting in the PCS layer:
  - Error/Alarm Insertion
  - Error/Alarm Display/Count
  - 10G/40G/1000G LAN PHY is supported

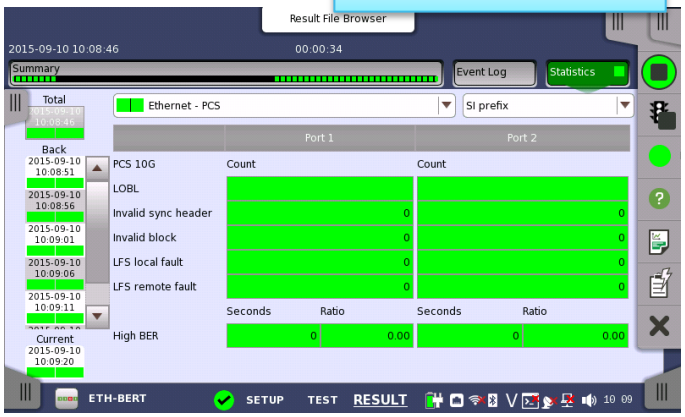
Error/Alarm Insertion Screen



PCS Error/Alarm Status



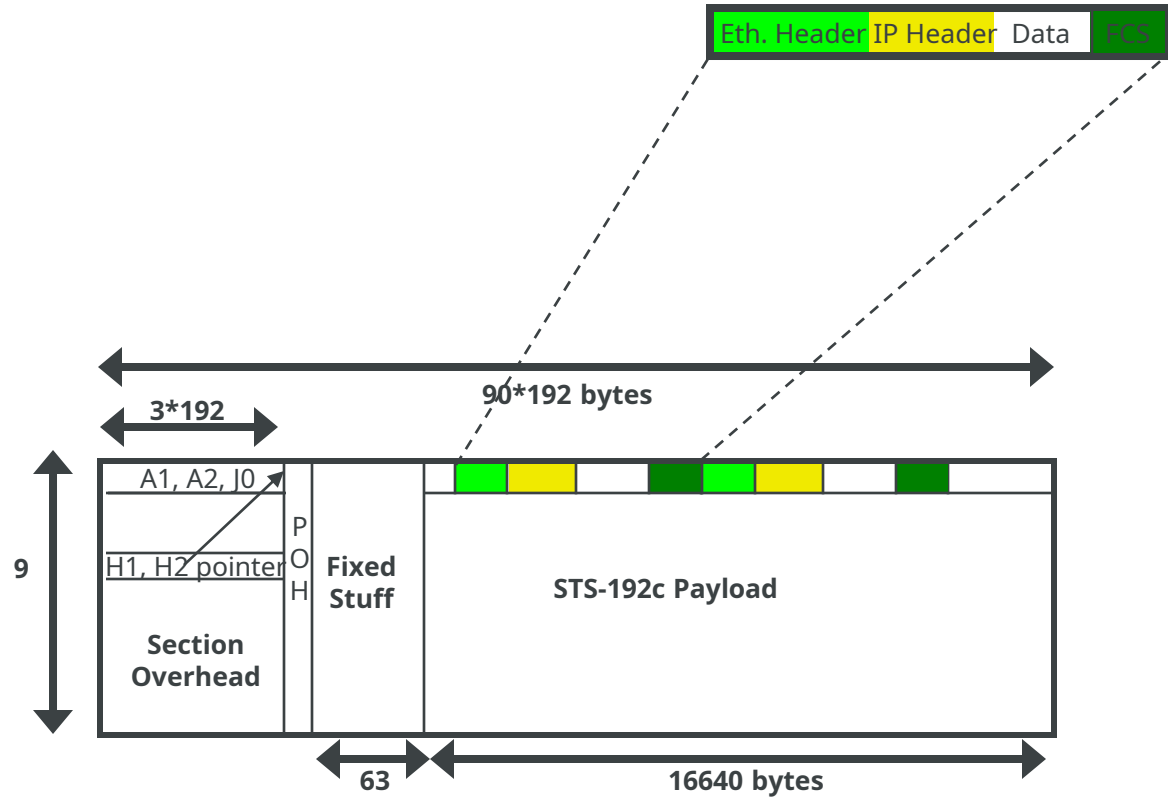
PCS Error/Alarm Statistics



- Does not support Stimuli function Invalid alignment marker/BIP error

10G WAN PHY Background

- 10G WAN PHY
  - Mapping Ethernet frames to SONET/SDH

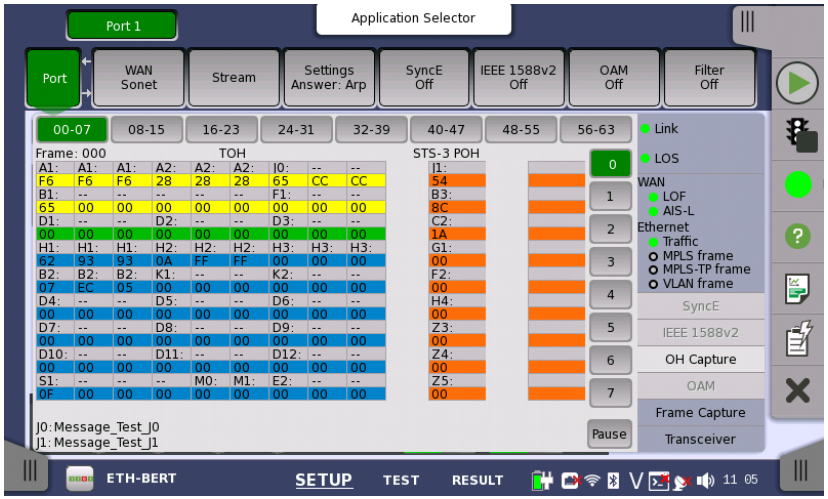


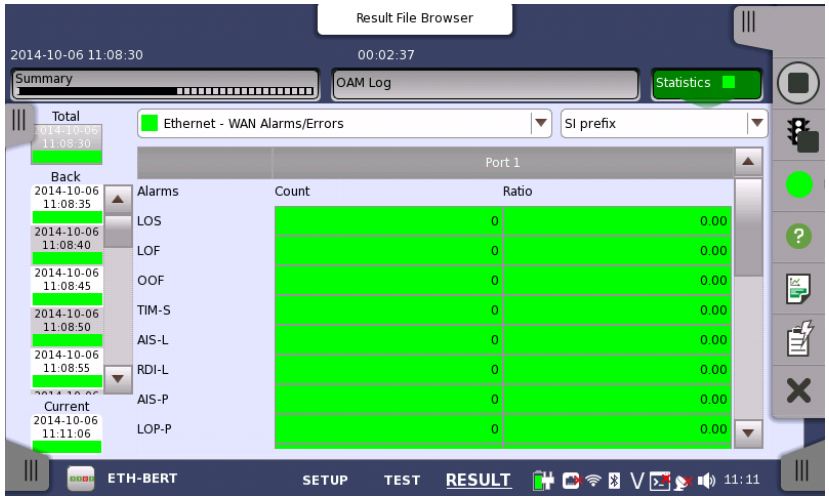
Fixed pointer in transmitted WAN signal; may have changed value when reaches destination

MT1100A 10G WAN PHY Function

Back to Index page

- WAN results
  - Bi-directional overhead byte capture (requires dual-port version)
  - Error and alarm statistics on WAN part of signal with Ethernet BERT application

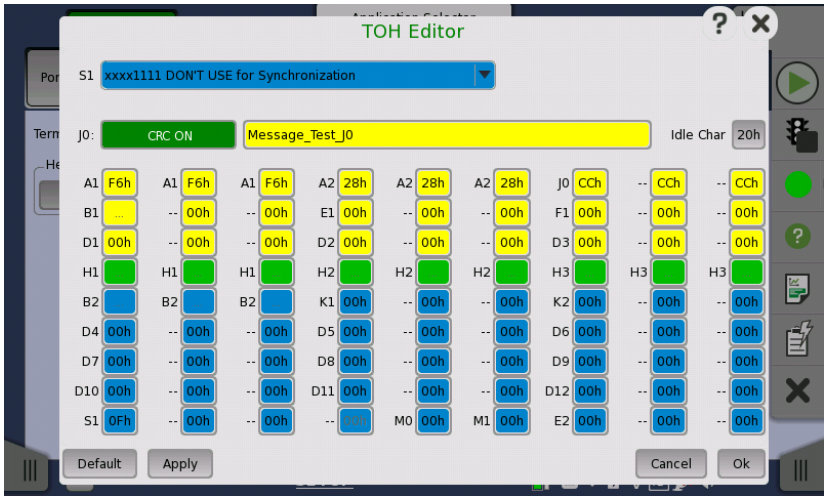


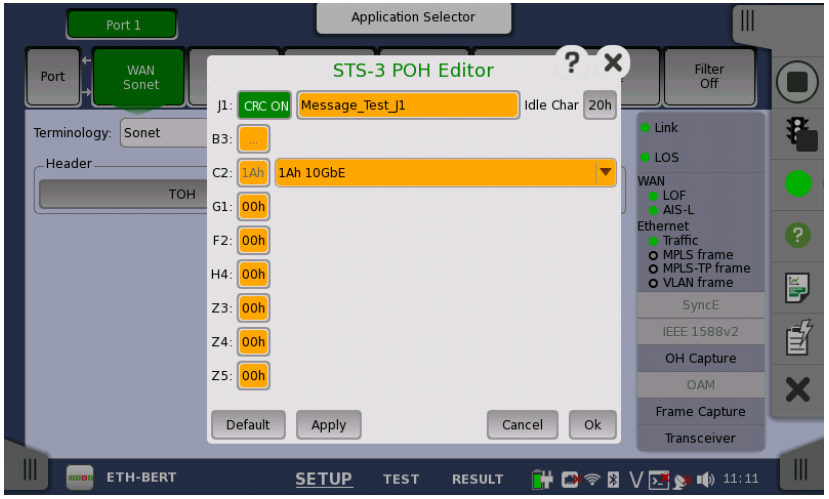


MT1100A 10G WAN PHY Function

Back to Index page

- WAN overhead byte generation
  - User programming of transmitted OH bytes
  - SDH or SONET terminology





Network Master Flex MT1100A

Back to Index page

- TCP Throughput Option (RFC 6349)

RFC 6349 Testing – TCP Throughput Option (up to 10 Gbps)

Back to Index page

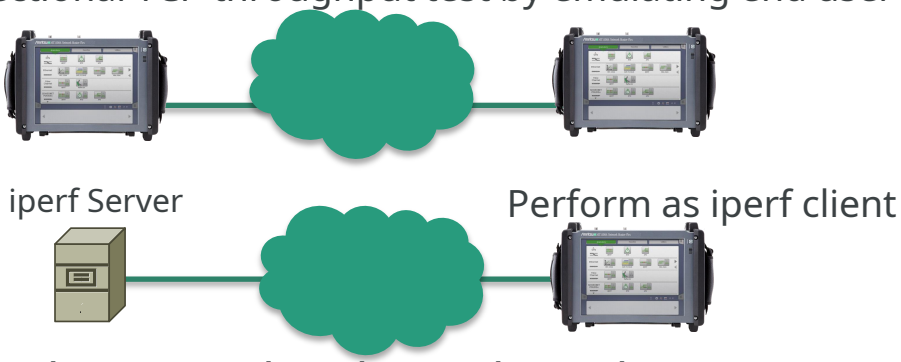
- Optimized performance essential in modern communication networks
- IP network operators can test networks based on IETF RFC 2544 and ITU-T Y.1564
  - Even when network seems fine at these tests, customers may complain that achieved throughput below agreement with operator
  - Can be caused by non-optimal configuration of Transmission Control Protocol (TCP) providing higher-layer connections through network, or badly configured network element burst size settings
- TCP adds reliability to communication over IP network because data receiver acknowledges packets received correctly
  - To support this, network elements have buffering
    - Data throughput reduced if buffering dimensions incorrect
- Operators use RFC 6349 test methodology to optimize TCP throughput

Benefit of TCP Throughput Test (up to 10 Gbps)

Back to Index page

- Eliminate end-user factors from test by emulating TCP host

Bi-directional TCP throughput test by emulating end user hosts

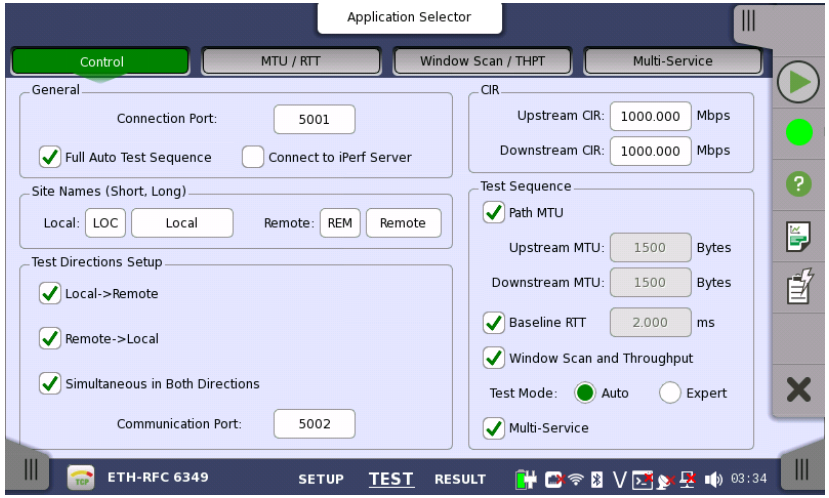


- MT1100A TCP throughput test hardware based
  - Always validate maximum TCP throughput potential possible on customer's network.
  - Repeatable tests with consistent results
- MT1100A can perform bi-directional TCP throughput testing
  - More realistic test result can be got.
- MT1100A can test up to four ports simultaneously
  - Can shorten multiple network commissioning test time.

RFC 6349 Testing – TCP Throughput Option (up to 10 Gbps)

Back to Index page

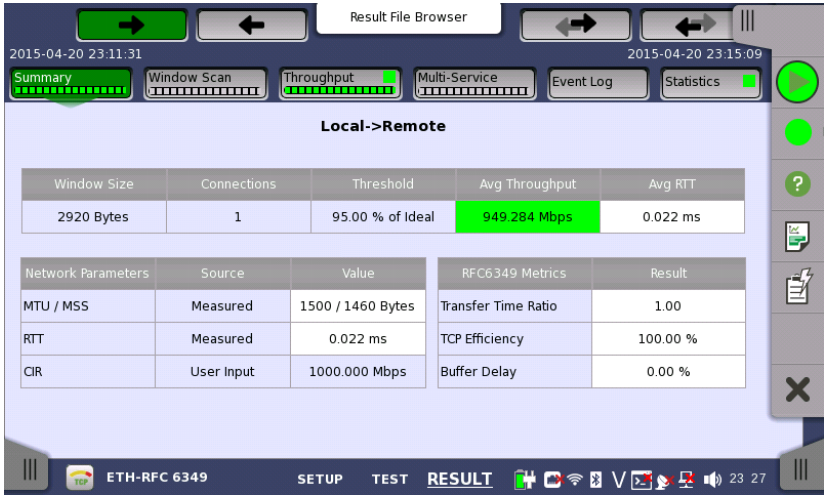
- TCP performance verification using RFC 6349 test methodology
- Client and server modes
- Connect to iperf server as client
- Automated or manual testing
  - New installation mode
  - Troubleshooting mode
- Simultaneous bi-directional testing with independent settings
- Configuration of TCP Throughput (RFC 6349) test

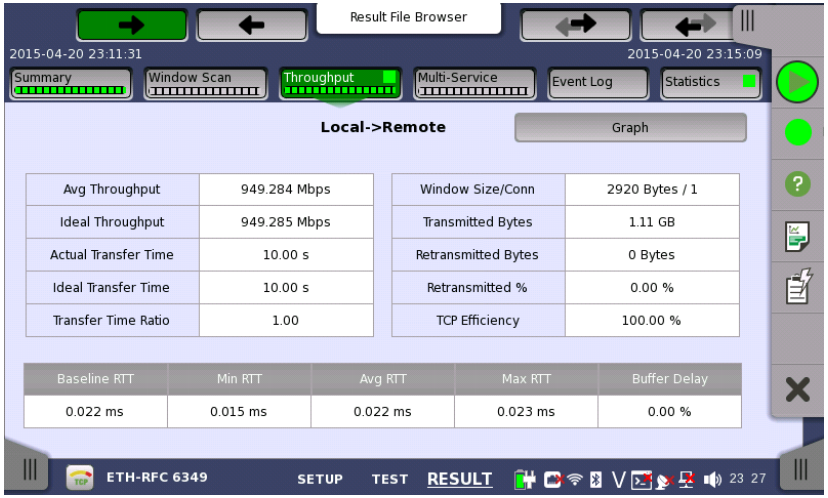


RFC 6349 Testing – TCP Throughput Option (up to 10 Gbps)

Back to Index page

- Measurements include:
  - MTU (Maximum Transmission Unit) based on RFC 4821
  - RTT (Round-Trip Time)
  - Window scan
  - Throughput
  - Multi-service (if selected)
- Measurement results include:
  - Transmitted and Retransmitted Bytes
  - TCP Transfer Time Ratio
  - TCP Efficiency
  - Retransmitted Percentage
  - Buffer Delay Percentage

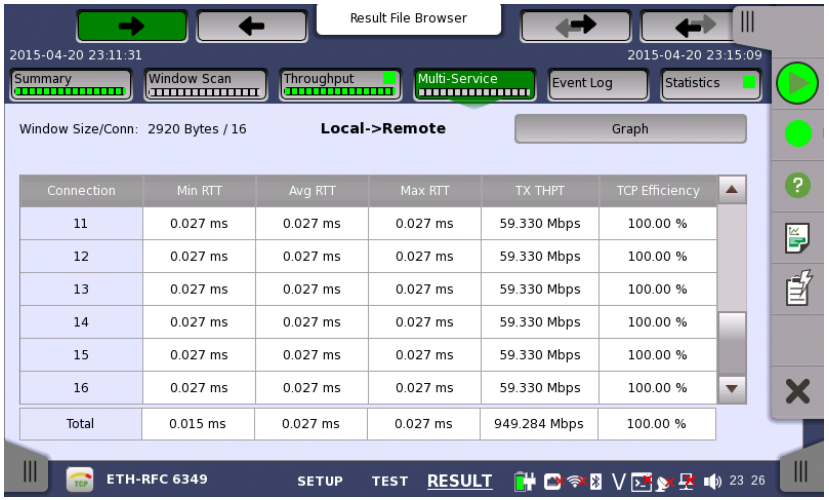




RFC 6349 Testing – TCP Throughput Option (up to 10 Gbps)

Back to Index page

- Multi-service results (when selected)
  - Test up to 16 connections



Window Scan Result

(Up to 10 Gbps)

Back to Index page

- MT1100A runs “Window Scan” test measuring TCP Throughput at each window size

Optimum window size

TCP Throughput Metrics

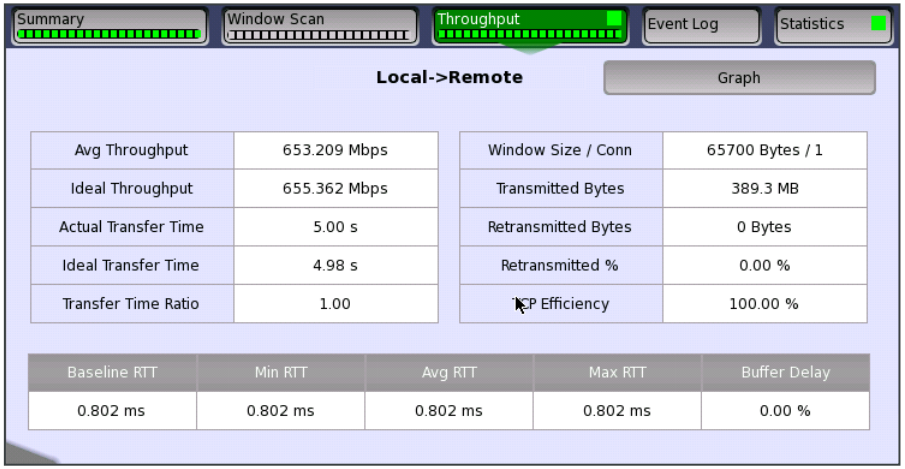
(Up to 10 Gbps)

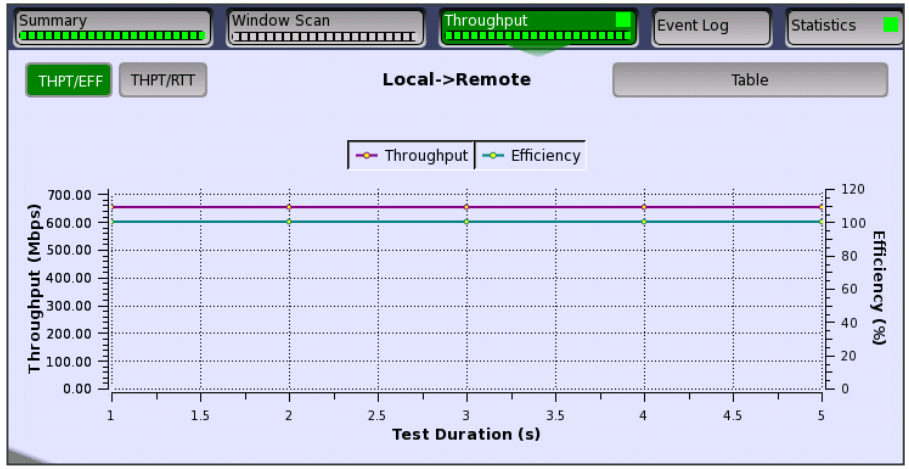
Back to Index page

$$\text{TCP Transfer Time Ratio} = \frac{\text{Actual TCP Transfer Time}}{\text{Ideal TCP Transfer Time}}$$

$$\text{TCP Efficiency \%} = \frac{\text{Transmitted Bytes} - \text{Retransmitted Bytes}}{\text{Transmitted Bytes}} \text{ X } 100$$

$$\text{Buffer Delay \%} = \frac{\text{Average RTT during transfer} - \text{Baseline RTT}}{\text{Baseline RTT}} \text{ X } 100$$





Network Master Flex MT1100A

Back to Index page

- Ethernet OAM Functionality

Ethernet OAM Background

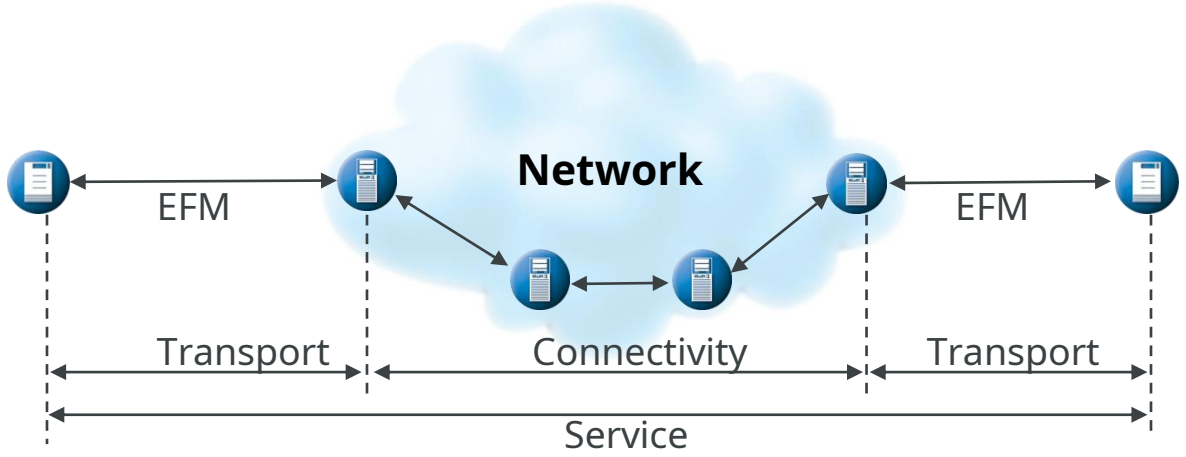
Back to Index page

- Ethernet moved from LAN technology to Carrier Class technology
- Ethernet Operations, Administration and Maintenance (OAM) developed to:
  - Ease operations, administration, and maintenance of complex Ethernet networks
  - Reduce operational expenses
- Ethernet OAM covers:
  - Link fault management
  - Connectivity fault management
  - Performance monitoring

Ethernet OAM Layers

Back to Index page

OAM layers	Functions	Standards
Transport layer	Ensures bi-directional communication between two directly connected devices Focuses on Ethernet First Mile (EFM) Link fault management	IEEE 802.3 (now includes IEEE 802.3ah)
Connectivity layer	Monitors path between two devices not directly connected Connectivity fault management incl. Link trace, continuity check and loopback protocols	IEEE 802.1ag ITU-T Y.1731
Service layer	Monitors status of services as seen by customer Performance monitoring including Frame Loss, Frame Delay and Throughput measurements	ITU-T Y.1731



Ethernet OAM Y.1731 and IEEE 802.1ag

Back to Index page

- Y.1731 and IEEE 802.1ag similar
  - Supported by both Y.1731 and IEEE 802.1ag:
    - Connectivity fault management
  - Supported by Y.1731 only:
    - Performance monitoring
  - Same frame format for OAM PDUs (Protocol Data Units)

Ethernet OAM IEEE 802.3ah

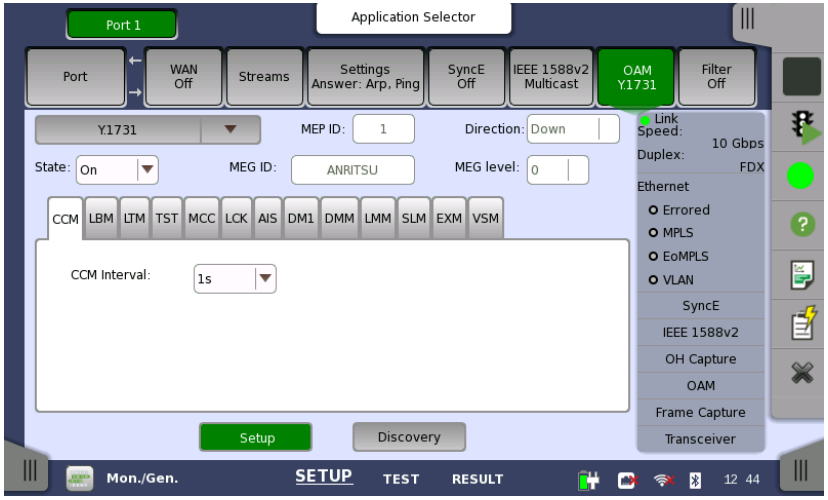
Back to Index page

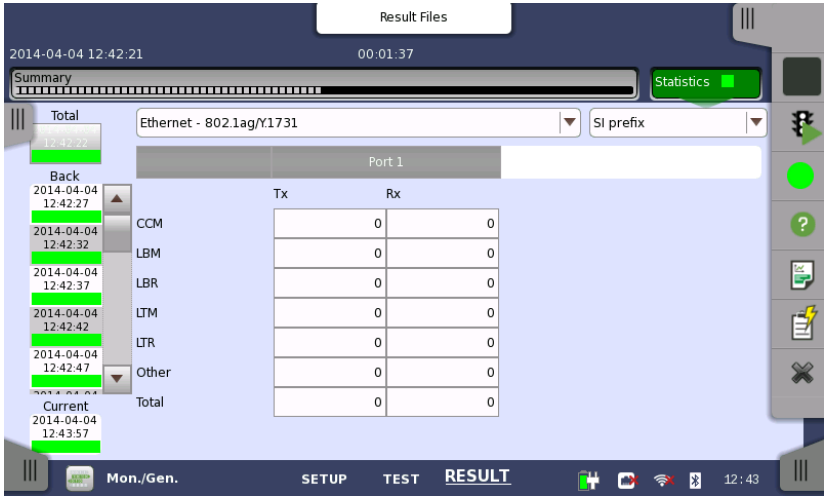
- Ethernet OAM IEEE 802.3ah functions:
  - Remote failure indication during fault
  - Remote loopback mode (“Real” loopback)
  - Fault isolation
  - Link performance and status monitoring
  - OAM discovery mechanism
    - Determines whether remote device has OAM enabled and configured parameters and supported functions compatible with requesting device
  - Optional activation of OAM
    - OAM can be enabled on ports subset or all ports
  - Extension mechanism
    - Available for higher-level management applications

Ethernet OAM

Back to Index page

- Ethernet OAM Y.1731 set-up and results:





Network Master Flex MT1100A

Back to Index page

- Mobile Backhaul Test
  - Synchronous Ethernet Test

Synchronous Ethernet Test (up to 10 Gbps)

Back to Index page

- Recently Ethernet become dominant technology for data transmission, due to simplicity and low cost
  - Started as LAN (Local Area Network) technology but now used for end-to- end communications
- Synchronous networks (PDH, SDH/SONET) migrating to Ethernet-based packet-switched network (PSN)
- Asynchronous nature of Ethernet causes transmission challenges:
  - Many existing networks have strong requirement for frequency synchronization across entire network
  - PDH, SDH/SONET technologies have “built-in” physical layer ability to carry reference Clock

Synchronous Ethernet Test (up to 10 Gbps)

Back to Index page

- Synchronization can be applied to Ethernet-based packet networks using Synchronous Ethernet
- Techniques under consideration for Ethernet synchronization are:
  - Physical synchronization signal forwarding as defined in ITU-T recommendations G.8261, G.8262 and G.8264 (in many cases now called SyncE)
  - Packet-based synchronization as defined in IEEE1588 v2 Precision Time Protocol (PTP)
    - ITU-T G.8265.1 telecom profile for frequency synchronization
    - ITU-T G.8275.1 telecom profile for phase/time synchronization

Synchronous Ethernet Test (up to 10 Gbps)

Back to Index page

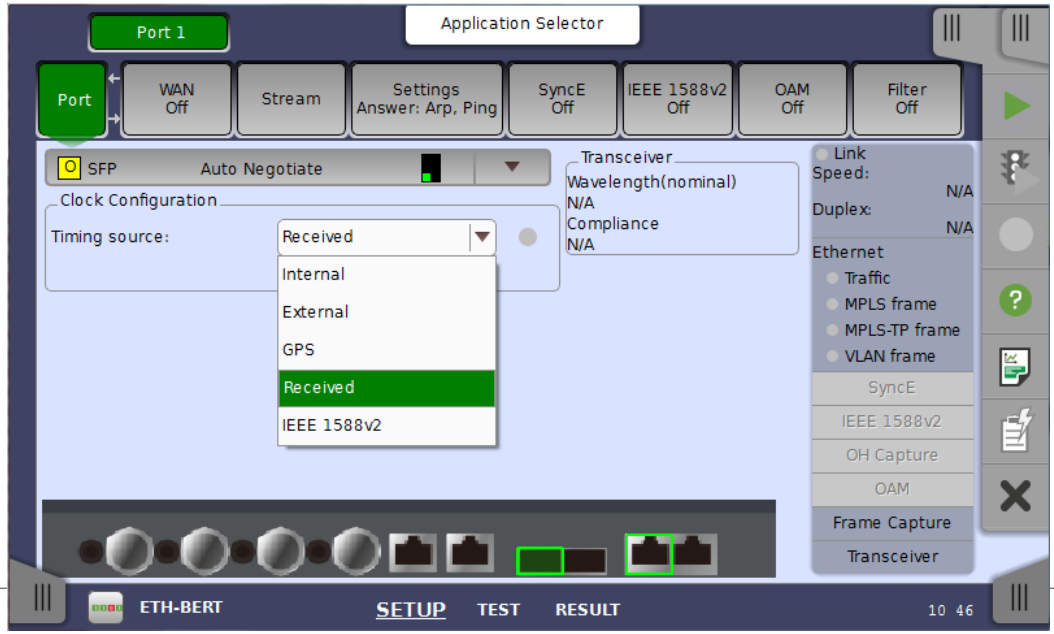
- Protocol Parameter G.8265.1 / G.8275.1 / G.8275.2
  - MT1100A Supports G.8265.1, G.8275.1 G.8275.2 and “Custom” profile

Parameters	G.8265.1	G.8275.1	G.8275.2
Purpose	Frequency	Frequency and Phase	Frequency and Phase
Protocol Stack	UDP/IP(v4/v6)/Ethernet	PTP/Ethernet (w/o VLAN)	UDP/IP(v4/v6)/Ethernet
Addressing	Unicast	Multicast	Unicast
Unicast negotiation	Yes	No	Yes
Timing Transfer Method	One-way or Two-way	Two-way	One-way or Two-way
Clock Behavior	One-step or Two-step	One-step or Two-step	One-step or Two-step
Path delay mechanism	End-to-end	End-to-end	End-to-end
Domain No.	4 to 23	24 to 43	44 to 63
Priority 1 range / Priority 2 range	- / -	128 / 0 to 255	128 / 0 to 255
Class	80 to 110	6,7,135,140,150,160,165,248,255	6,7,135,140,150,160,165,248,255
BMCA	Static BMCA	Alternative BMCA	Alternative BMCA
Message interval of Sync	1/128 to 16	1/16	1/128 to 1
Message interval of Delay Request	1/128 to 16	1/16	1/128 to 1
Message interval of Announce	1/8 to 16	1/8	1/8 to 1
Announce timeout	2	3 to 10	2

MT1100A Synchronous Ethernet Test (up to 10 Gbps)

Back to Index page

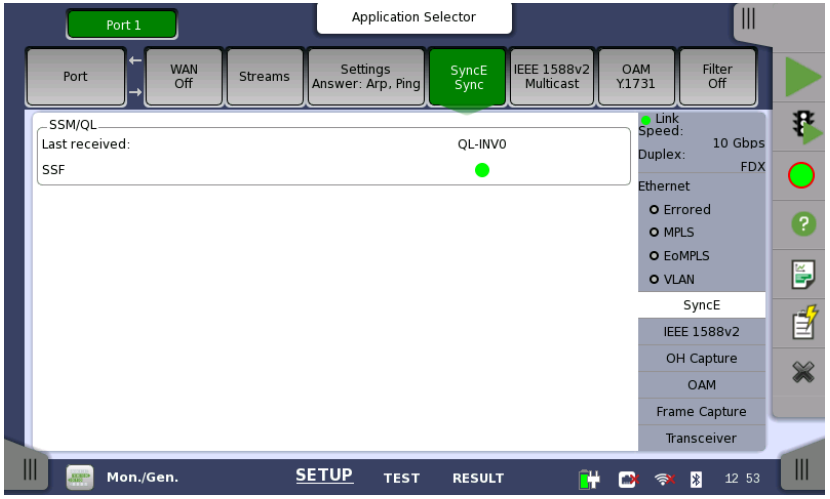
- SyncE (ITU-T G.826x) functions:
  - Detect ESMC messages and real time display of received SSM/QL byte
  - Record ESMC message log
  - Generate alarm when SSM/QL not received within 5 seconds
    - Clear alarm on SSM/QL reception
  - Transmit ESMC/SSM messages with user-defined QL
    - Four user-selectable QL interpretations
  - SyncE recovered frequency monitor and synchronized packet generation.

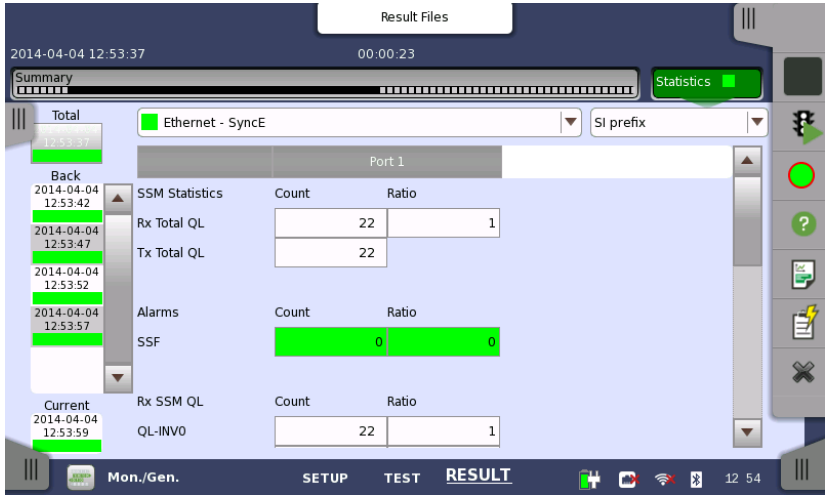


MT1100A Synchronous Ethernet Test (up to 10 Gbps)

Back to Index page

- SyncE (ITU-T G.826x) results (per port):
  - Status information:
    - Rx SSM QL (current value)
  - Statistics on SSM QL messages and values





MT1100A Synchronous Ethernet Test (up to 10 Gbps)

Back to Index page

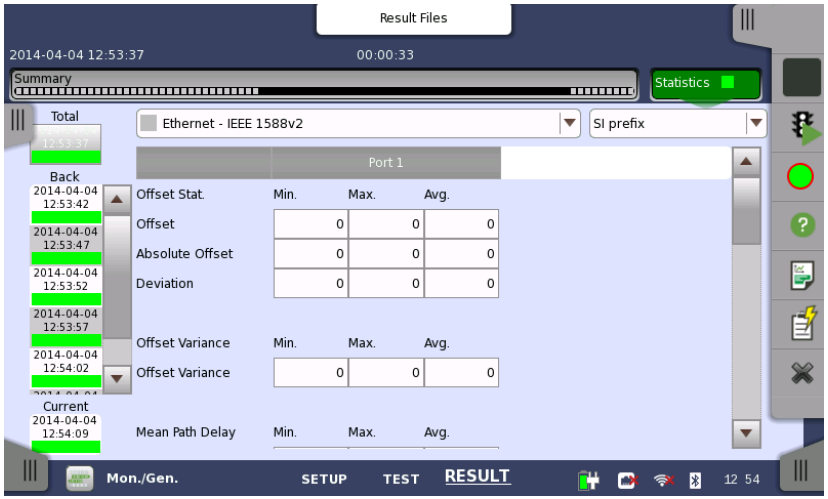
- IEEE 1588 v2 (PTP) functions:
  - Support G.8265.1, G.8275.1 and G.8275.2 profile and 'User defined' one.
  - Emulating a master clock.
    - Selectable UTC source from internal instrument clock or GPS.
    - Configurable parameters of Announce message, etc.
  - Emulating slave clock
    - Configurable parameters of message interval, etc.
    - Best master clock algorithm (BMC)
  - Supported encapsulations: PTP-UDP-IP(IPv4 and IPv6) and PTP-MAC
  - Support stacked VLAN and MPLS
  - Real time PTP signaling sequence in ladder chart, off-line analysis by PCAP file capture, message statistics, message rate measurement.

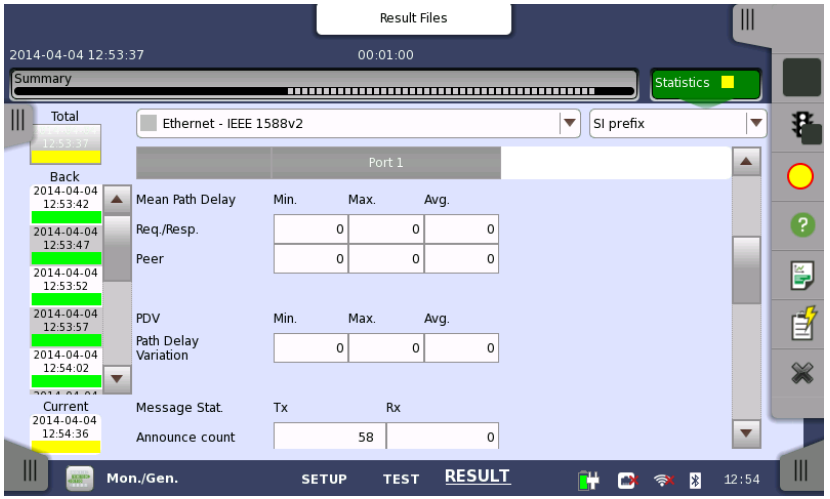
For quick analysis and troubleshooting of IEEE 1588 v2 (PTP) signaling

MT1100A Synchronous Ethernet Test (up to 10 Gbps)

Back to Index page

- IEEE 1588 v2 (PTP) results – statistics on:
  - Offset and offset variance
  - Path Delay Variation (PDV)
  - Messages
  - Clock state transitions

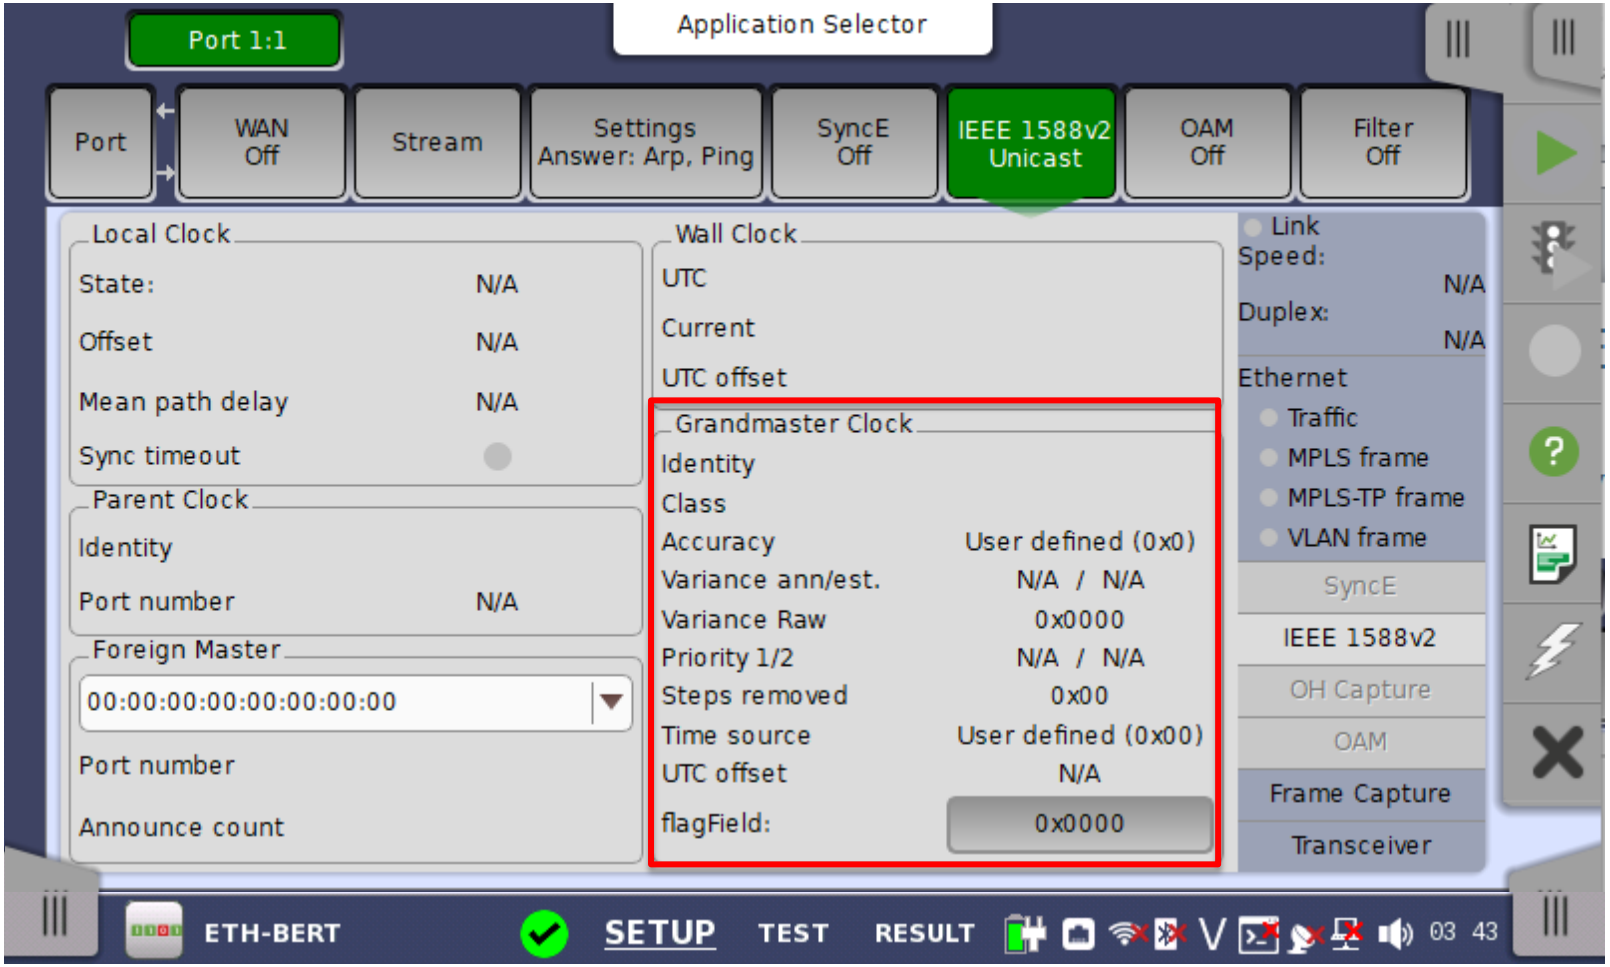




MT1100A Synchronous Ethernet Test (up to 10 Gbps)

Back to Index page

- IEEE 1588 v2 (PTP) clock status real time information



Network Master Flex MT1100A

Back to Index page

- Mobile Fronthaul Installation and Verification
  - CPRI/OBSAI Test
  - eCPRI/ IEEE1914.3 (RoE)

CPRI Background

Back to Index page

- Operators supporting explosive spread of smartphones and tablets by increasing bandwidth of mobile communications networks
- Driving complete change in mobile communications systems
  - Adoption of Centralized-Radio Access Network (C-RAN).
    - Using C-RAN, the mobile fronthaul is configured from centralized Base Band Units (BBU) and multiple Remote Radio Head (RRH) units connected via general-purpose interfaces, such as the Common Public Radio Interface (CPRI) or Open Base Station Architecture Initiative (OBSAI).

CPRI Bit Rates

Back to Index page

- CPRI bit rates are referred to as “option #”
- There are now eight options (CPRI Specification V6.0)
- MT1100A supports Option 8, 10.1376 Gbps, reflecting marketing requirement of supporting exploring mobile network bandwidth.
- MT1100A can perform simultaneous testing up to 4 ports to reduce commissioning testing time.

Option	Bit Rate (Gbps)	Line Code
1	0.6144	8B/10B
2	1.2288	8B/10B
3	2.4576	8B/10B
4	3.0720	8B/10B
5	4.9152	8B/10B
6	6.1440	8B/10B
7	9.8304	8B/10B
8	10.1376	64B/66B

OBSAI Bit Rates

Back to Index page

- Four OBSAI bit rates are defined.
- MT1100A supports 6.144 Gbps, reflecting marketing requirement of supporting exploring mobile network bandwidth.
- MT1100A can perform simultaneous testing up to 4 ports to reduce commissioning testing time.

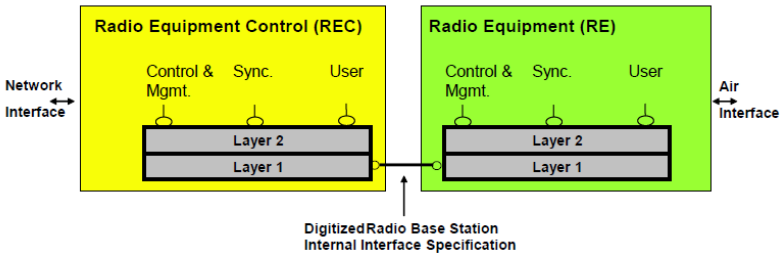
Bit Rate (Gbps)	Line Code
0.768	8B/10B
1.536	8B/10B
3.072	8B/10B
6.144	8B/10B

C-RAN Market

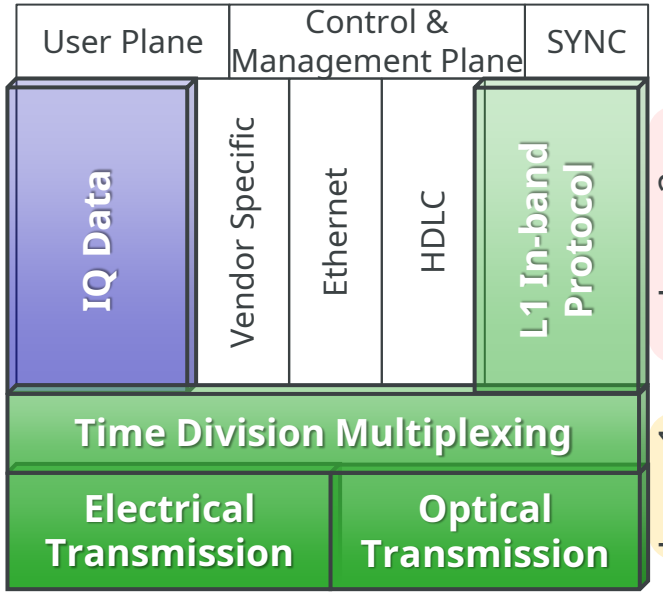
Back to Index page

- Market requirements
  - Minimizing number of BBU's per antenna cuts operator costs (rent, power, HW, etc.)
    Locating BBU 15 km or more from multiple RRH requires reliable connection i.e. C-RAN
  - CPRI runs over C-RAN with two main layers:
    - Layer 1: Physical transport
    - Layer 2: Several areas

    C-RAN main interest is L1 in-band protocol; understanding this area allows operator to troubleshoot alarms and errors



In CPRI, BBU is called REC, and RRH is called RE (Fig. 1 from CPRI Specification V6.0)



CPRI/OBSAI – Test cases

Back to Index page

- Test case 1
  - Test the line between REC(s) and RE(s)
    - System testing
    - Installation testing
  - The line can be
    - Optical
    - Carried over radio link or microwave link
    - CPRI over OTN
    - Instrument is connected via optical interface to the link
  - Terminate both sides of the transmission line
    - BER test (Framed or unframed) *1
      - One side could be loop back
    - Delay measurement
      - With one side in loop back

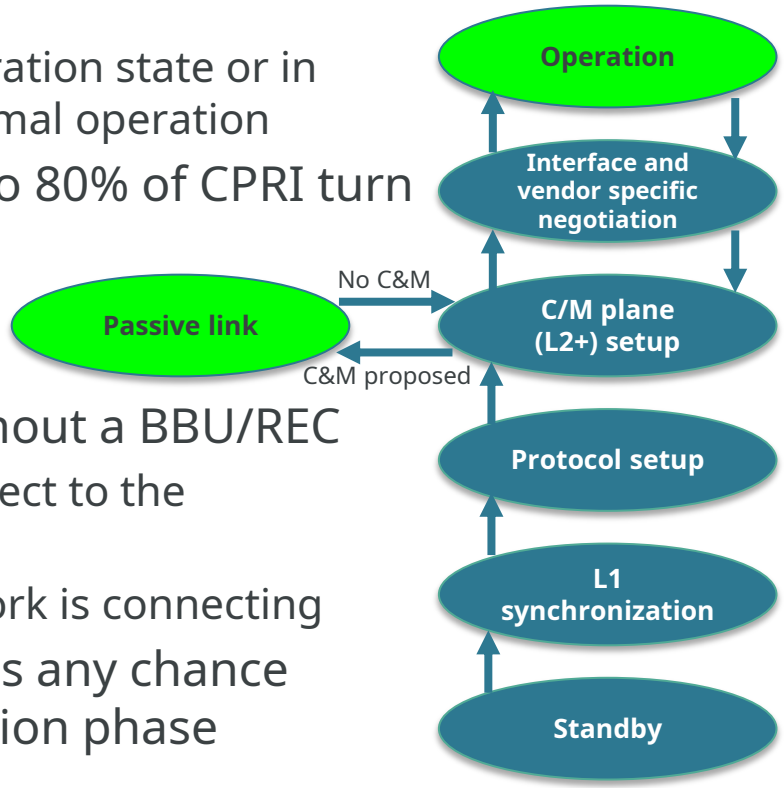
Test case 1

*1: OBSAI supports UnFrame only

CPRI/OBSAI – Test cases

Back to Index page

- Test case 2
  - CPRI Specification V7.0 defines
    - When both the devices are in the Operation state or in the Passive link state, the link is in normal operation
  - Operators have experienced that up to 80% of CPRI turn up issues happen in the lowest layers
  - Essential during installation to confirm the RRH/RE is able to communicate to the ground even without a BBU/REC
    - Confirming the RRH/RE is able to connect to the Passive Link state
    - Confirming HDLC layer (Layer 2) network is connecting
  - With the above completed it minimizes any chance of issues during the BBU/REC installation phase

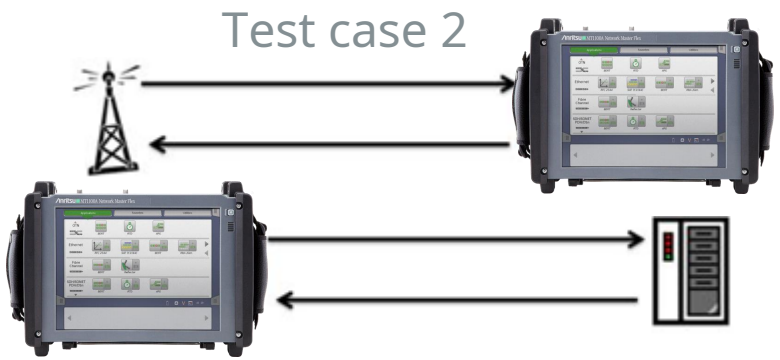


Extract from Figure 30 in CPRI Specification V7.0: Start-up states and transitions

CPRI/OBSAI – Test cases

Back to Index page

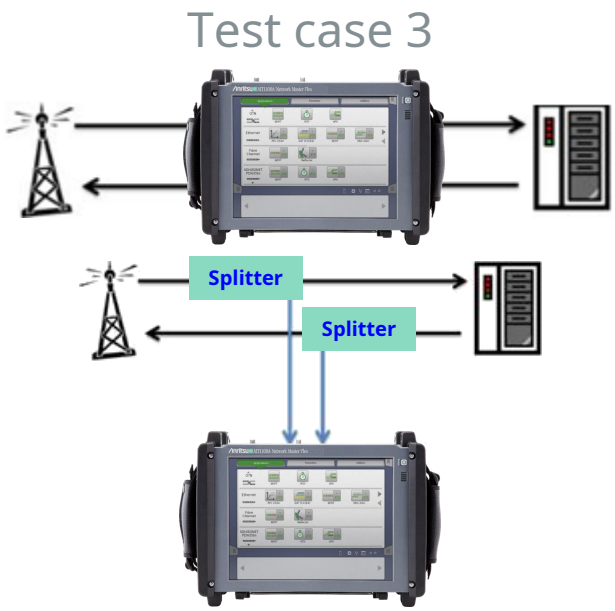
- Test case 2
  - Connect to the actual equipment (REC or RE) to verify that it is alive
    - Signal level and frequency measurement
      - Optical cable ends may be checked with Video Inspection Probe (VIP)
    - Monitor control word K30.7 – indicates error in the 8B/10B line code (CPRI option 1-7 only) – and 8B/10B code violations
    - Check equipment behaviour
      - Check that the equipment can reach the “Passive Link” state
      - Confirming HDLC layer (Layer 2) network is connecting
      - Check the equipment’s behaviour when alarms are generated



CPRI/OBSAI – Test cases

Back to Index page

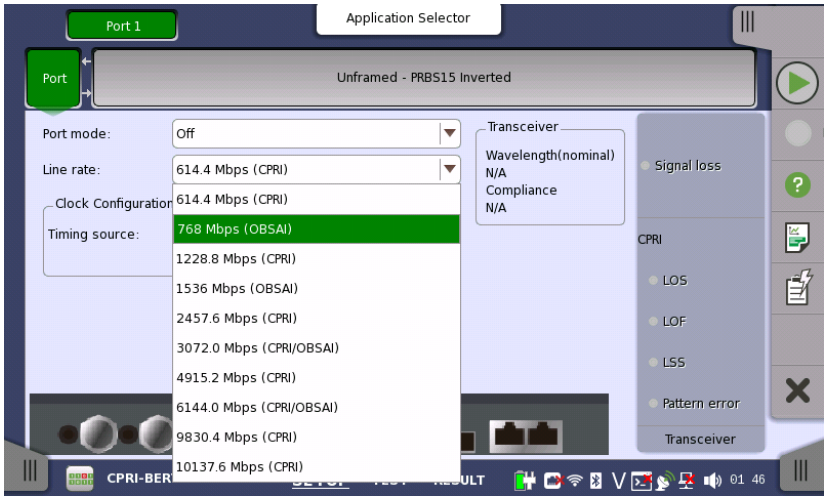
- Test case 3
  - Monitoring of the actual line between REC (Radio Equipment Control) - (master) and RE (Radio Equipment) - (slave)
    - Utilizing dual port in through mode or monitor
      - Monitor interactive behaviour of equipment
    - For maintenance or in-service troubleshooting



MT1100A CPRI Wire Line Testing

Back to Index page

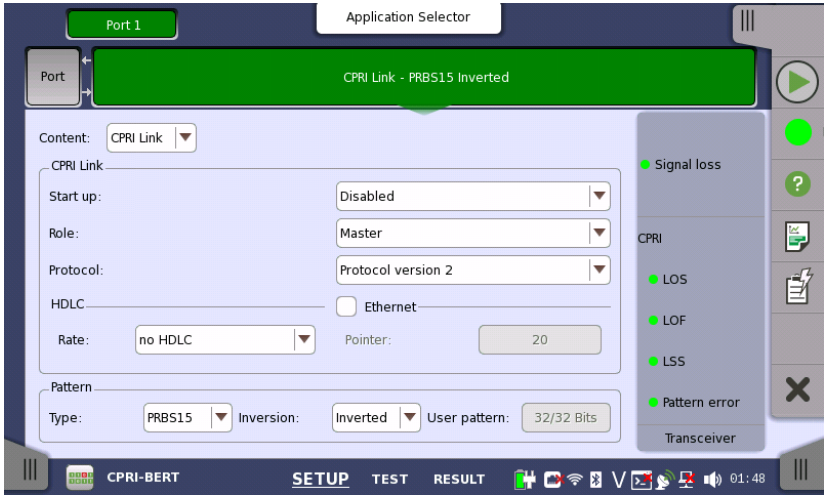
- Supports CPRI interface rate option 1 (614.4 Mbit/s) to option 8 (10.1376 Gbit/s)
  - Ensures testing of current and future CPRI interfaces



MT1100A CPRI Wire Line Testing

Back to Index page

- Testing at any rate
- Ability to exercise BBU or RRH up to Passive link status (as per latest CPRI standard)
- Support of pass-through mode
  - Complete solution for detailed I&M testing



MT1100A CPRI Wire Line Testing

Back to Index page

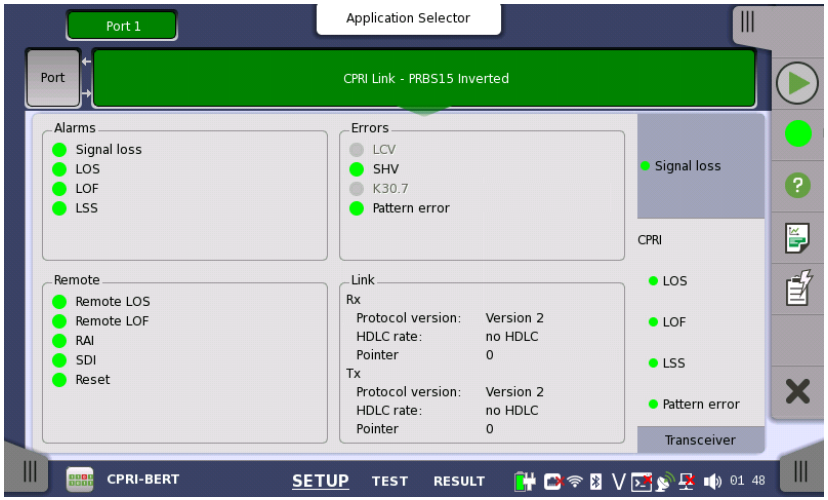
- Displayed signal level and bit rate gives first verification of received- signal condition

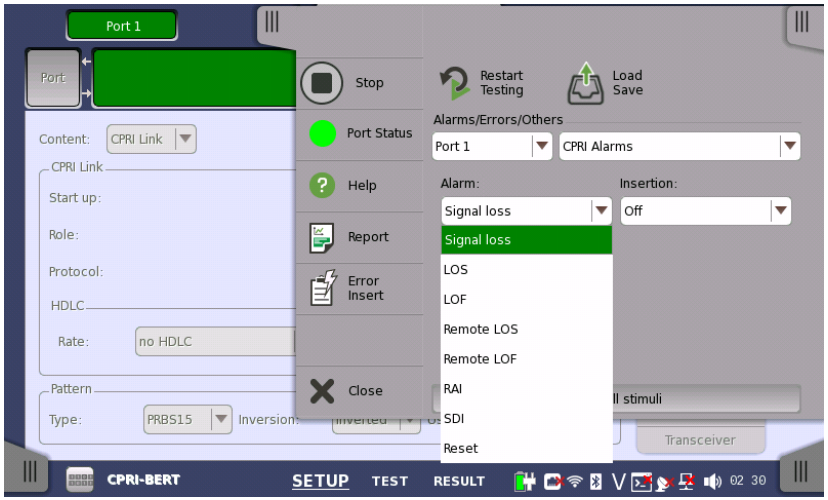
- Using Video Inspection Probe (VIP) to check fiber end face confirms quality practices and removes key cause of turn-up failure.

MT1100A CPRI Wire Line Testing

Back to Index page

- Checking for and inserting Layer-2 alarms and errors from BBU to RRH
  - Ensures engineer can complete advanced fault finding and evaluate issue root cause

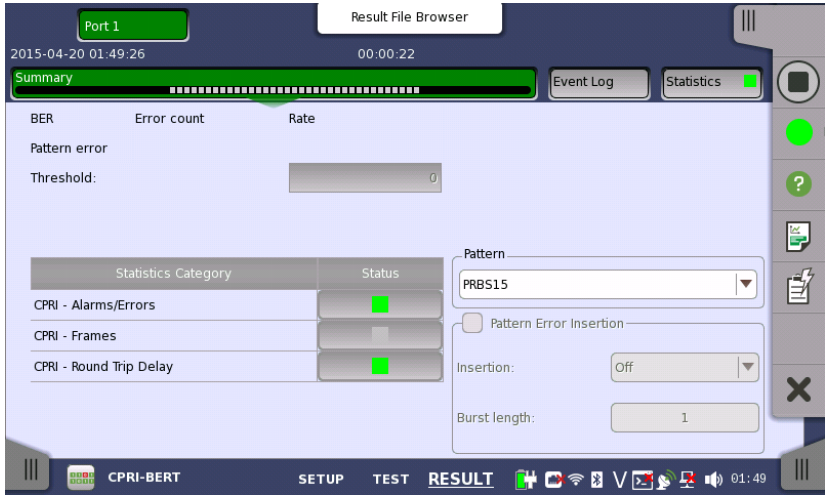


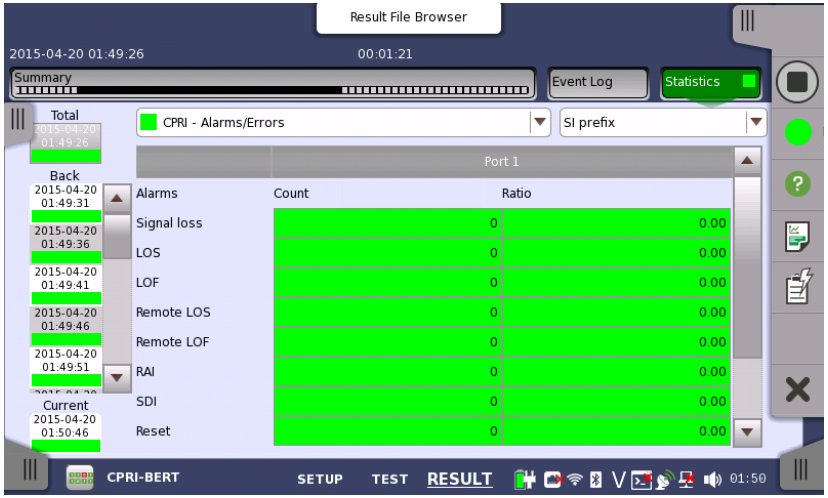


MT1100A CPRI Wire Line Testing

Back to Index page

- Test results:
  - Summary screen with pattern error information and survey of result pages
  - Alarms/Errors screen with details of detected CPRI alarms and errors
  - Color coding highlights detected alarms and errors

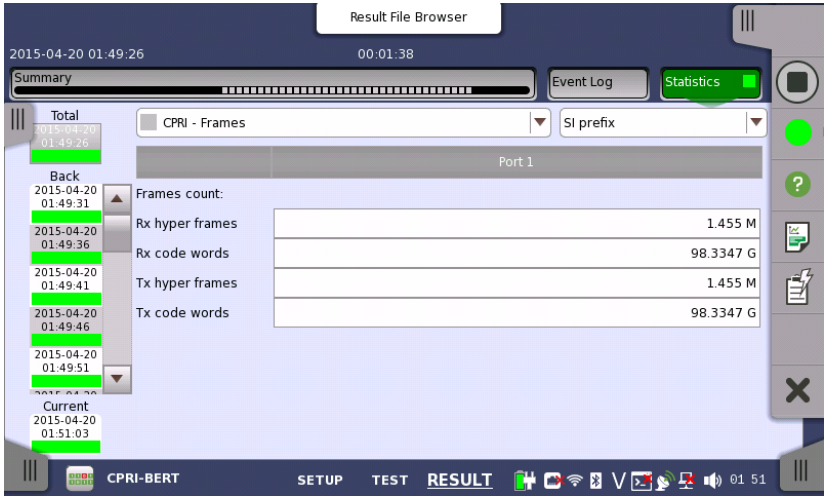


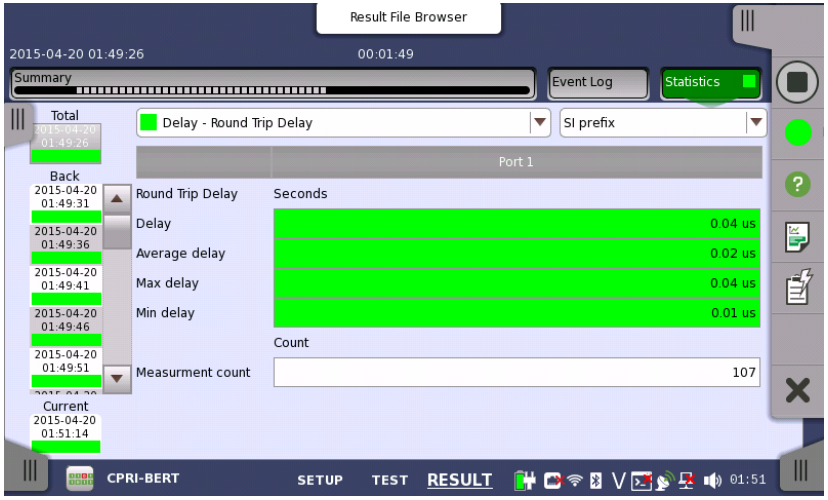


MT1100A CPRI Wire Line Testing

Back to Index page

- Test results:
  - CPRI Frames screen with counts of received and sent frames and code words
  - Delay screen showing measured Round Trip Delay

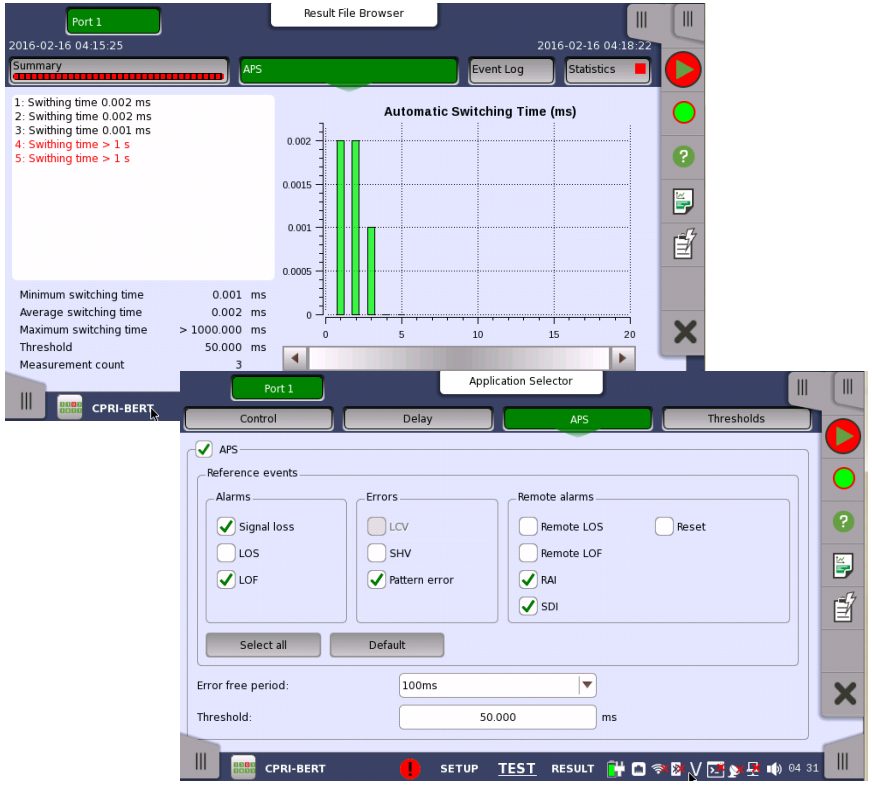




MT1100A CPRI Wire Line Testing

Back to Index page

- Added APS measurement function to CPRI BERT application
  - Sets any APS measurement start/stop trigger using checkbox, with APS measurement started/stopped at selected trigger OR condition
  - Choice of triggers for network configuration and hypothetical faults for analyzing how equipment and network perform at APS operation



Graph and Event log screens for easy viewing and analysis

CPRI over OTN

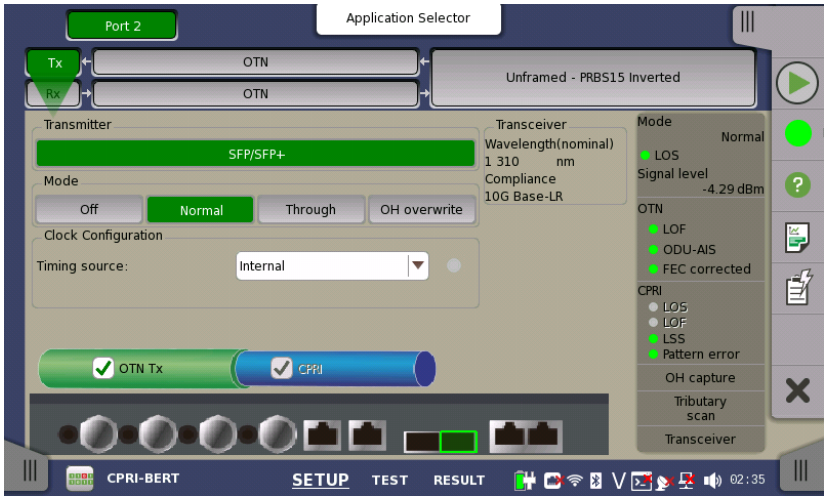
Back to Index page

- Market requirements
  - Several vendors working on CPRI over OTN solutions
  - CPRI over OTN:
    - Transport raw radio (CPRI) data from RE over optical fiber to central location for baseband processing
      - Single location serving multiple REs
      - Consolidation has huge power and cost savings over distributed approach without impacting network scalability
  - OTN supports transport of several protocols over same fiber
    - Same management system across network

MT1100A CPRI Wire Line Testing

Back to Index page

- Support for CPRI over OTN enables tests of latest CPRI implementations

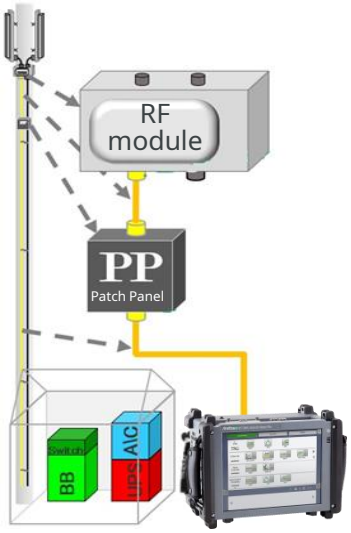


MT1100A OBSAI Testing

Back to Index page

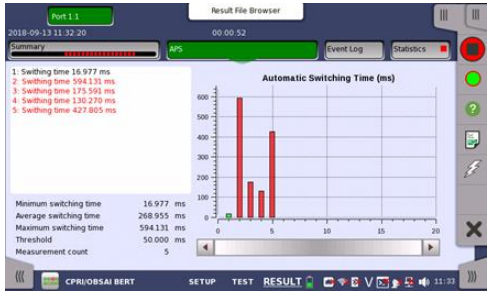
OBSAI Frame Commissioning Test, Error/Alarm analysis, and APS and Delay measurements

- Helps cut costs of MFH I&M
- Ideal low-cost signal source and measuring instrument for developing and evaluating MFH transmission equipment



OBSAI Frame Setting

APS Measurement



- Supported rates : 768 M, 1536 M, 3072 M, and 6144 Mbps
- Tx/Rx status data display
- RP3 Address, and Type editing
- 6144 M auto-scrambling, Scramble SEED manual setting

Useful Point !

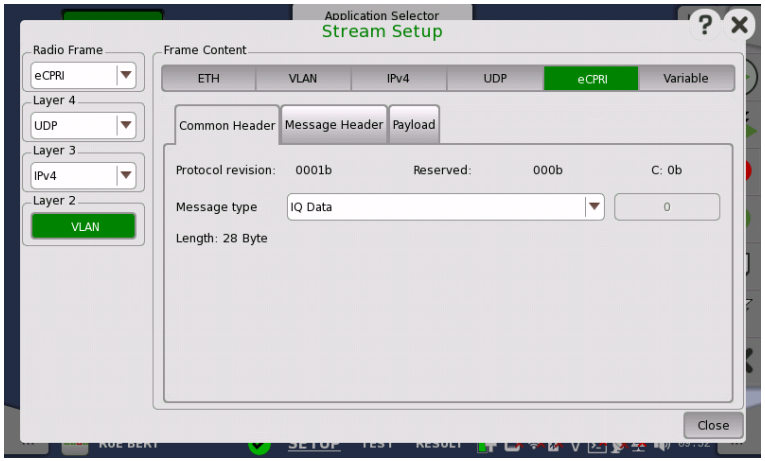
Supports confirmation of Tx/Rx settings at one screen and simplifies evaluation of connection conditions with status information. Moreover, simultaneous installation of OBSAI function, SEEK function, OTDR module and CPRI module combines all functions required by MFH on-site tests in one unit for excellent maintainability and reduced costs.

eCPRI/IEEE1914.3

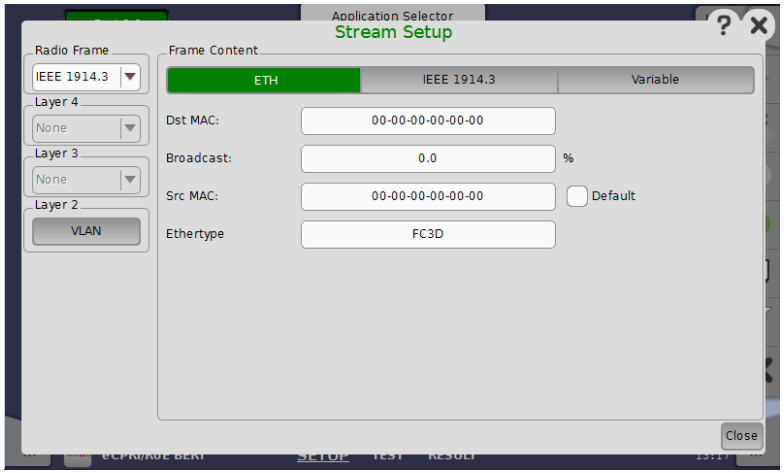
Back to Index page

- Market
  - Most MFH networks are based on CPRI and will have to move to these new frame formats for 5G or before allowing the operator to manage the massive increase in data throughput requirements.
  - IEEE 1914.3 frames will likely also to be utilized back into the MBH as the architecture as the connection from Core / Metro to the MFH will evolve.

MT1100A support BER test of eCPRI/IEEE 1914.3



eCPRI Frame Setting



IEEE1914.3 Frame Setting

Network Master Flex MT1100A

Back to Index page

- Powerful Storage Area Networking (SAN) Testing
  - Fibre Channel Functionality

MT1100A Product Highlights

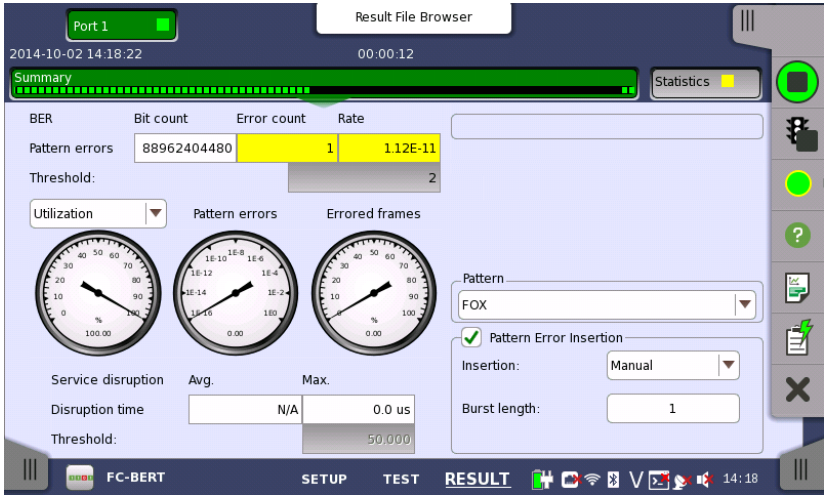
Back to Index page

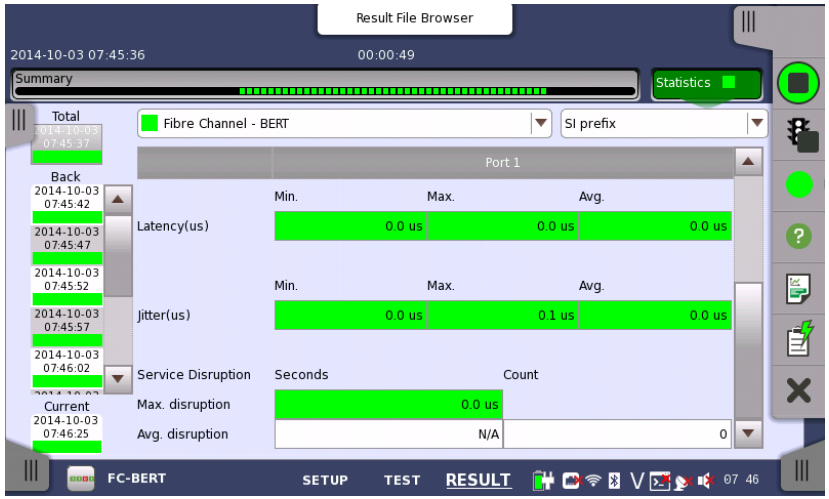
- Powerful tests of Fibre Channel links
  - Test of 1 GFC, 2 GFC, 4 GFC, 8 GFC and 10 GFC
    - Optional mapping to OTN
  - Latency measurement
  - BER testing including service disruption measurement
  - Line alarm and error monitoring
  - Normal or Reflector mode

MT1100A Product Highlights

Back to Index page

- Color-coded displays give easy overview of GO/NO-GO results on Fibre Channel links
- Powerful Fibre Channel statistics include Latency, Packet Jitter and service disruption information
  - Optional threshold settings for easy understanding of results

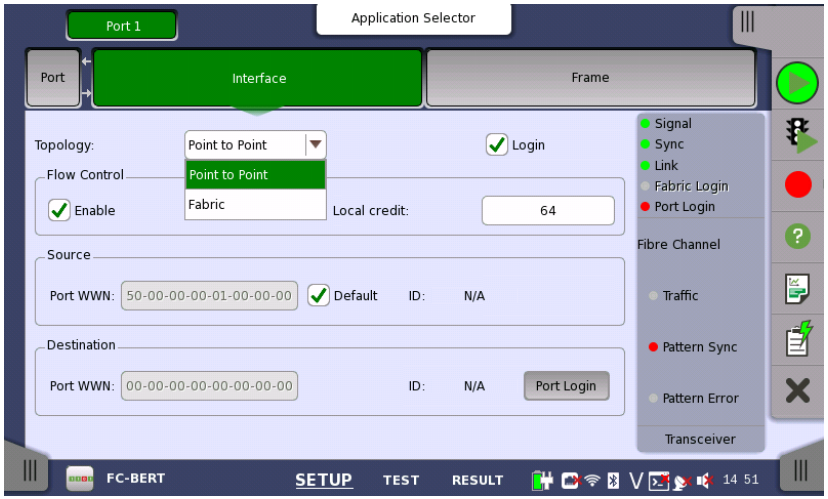


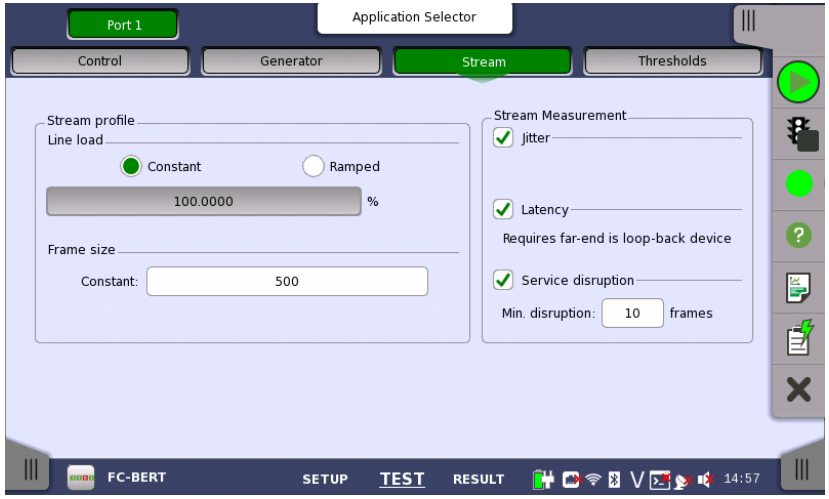


MT1100A Product Highlights

Back to Index page

- Point-to-point and Fabric topology
- Latency, Packet Jitter and service disruption measurements

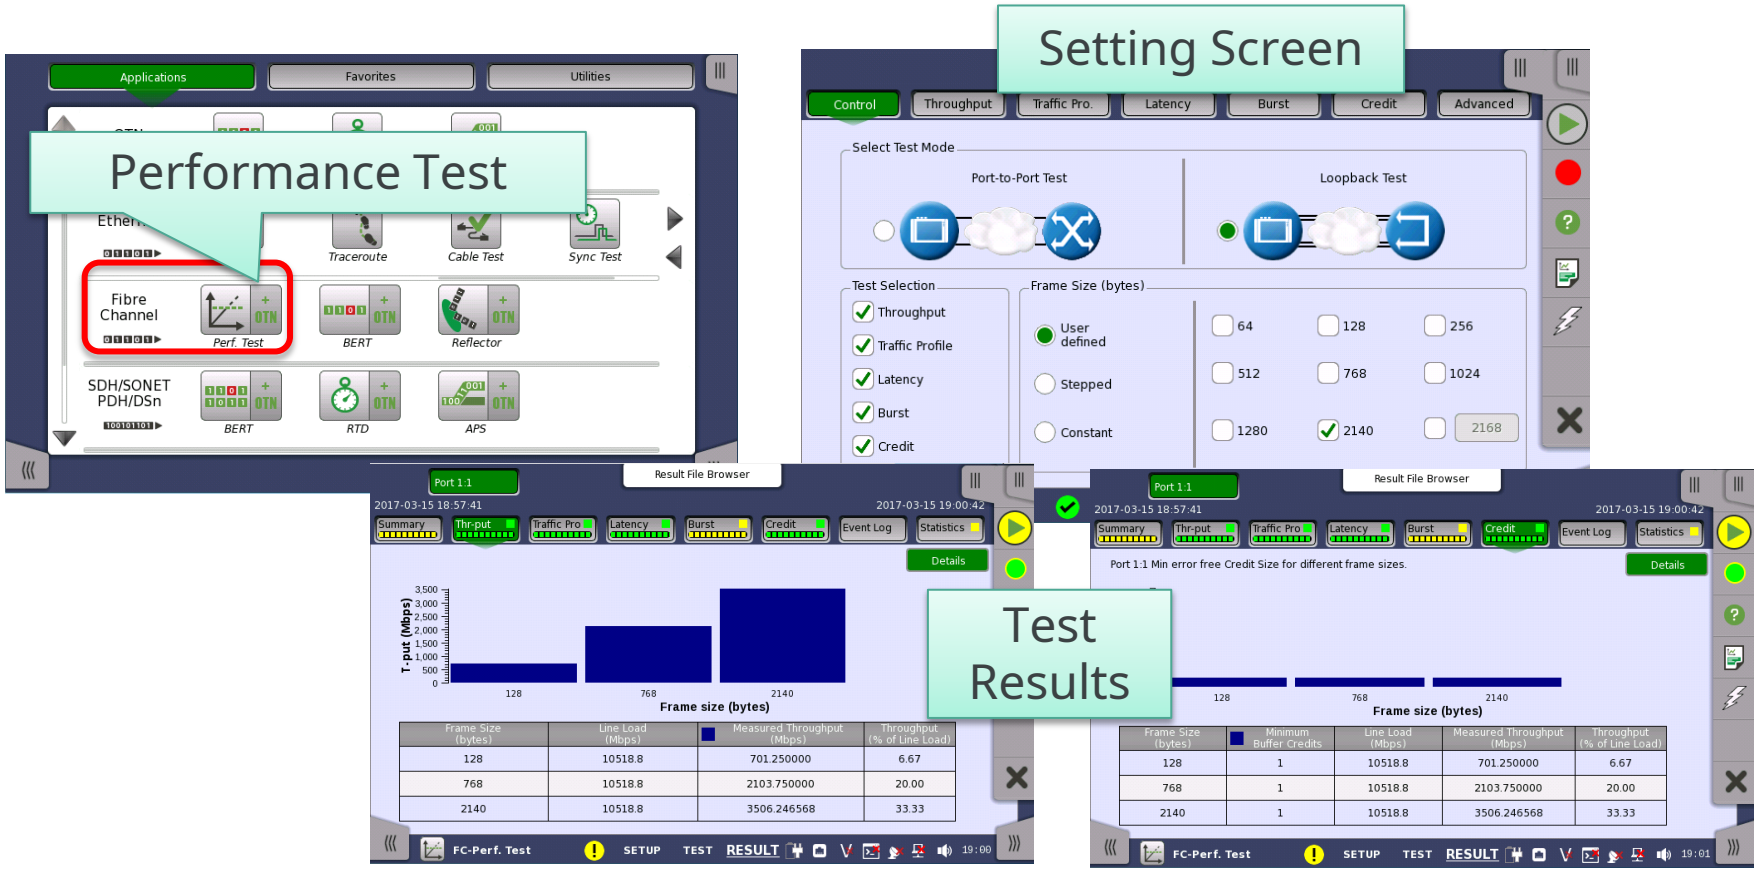




MT1100A Product Highlights

Back to Index page

- Performance test application to Fibre channel interface
  - Supports throughput, latency, and buffer credit performance verification for Fibre channel networks and Fibre channel equipment



Network Master Flex MT1100A

Back to Index page

- OTN Metro and Core Network Tests

OTN Background

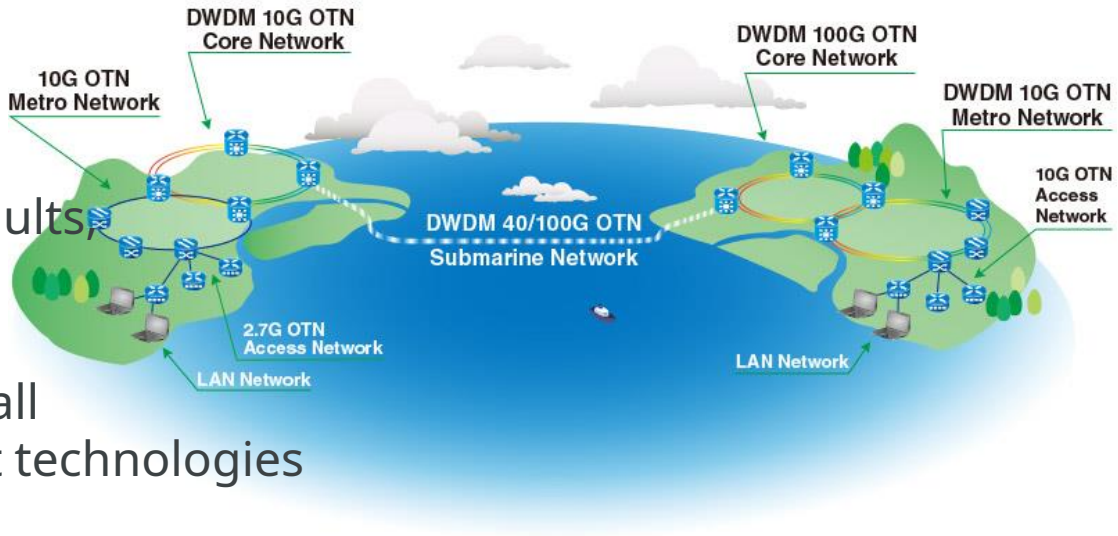
Back to Index page

- ITU-T defines an Optical Transport Network (OTN) as a set of Optical Network Elements (ONE) connected by optical fiber links, able to provide functions of transport, multiplexing, switching, management, supervision and survivability of optical channels carrying client signals.
  - Typical signals carried by OTN are:
    - SONET/SDH
    - Ethernet
    - Fibre Channel
    - CPRI
  - Key OTN functions include:
    - Mapping/demapping of non-OTN signals
    - Multiplexing and demultiplexing of OTN signals
    - Forward Error Correction

OTN Background

Back to Index page

- OTN networks first designed for submarine sections
  - Quickly moved to Core → Metro → Access
    - Operators can implement more services, control and management
- Simplifying network management is key for operators
  - Control customer traffic from access point and across network (single system single management)
  - Greater insight about faults, quick repair and fewer maintenance issues
  - Single management of all legacy and replacement technologies



MT1100A Product Highlights

Back to Index page

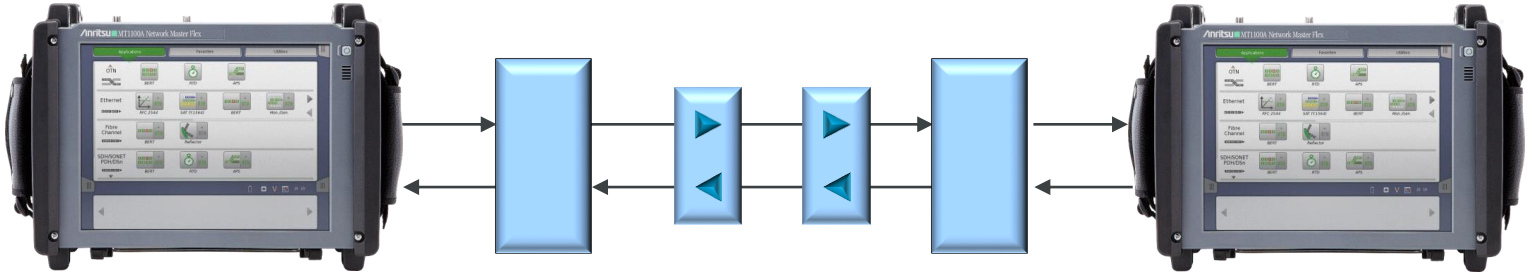
- Comprehensive OTN testing for metro and core network I&M
  - OTN tests up to OTU4
    - ODU0, ODUflex, multistage mapping
  - Test Ethernet, CPRI, Fibre Channel and SDH/SONET client signals mapped to OTN signal
  - OTN tests with bulk signals at OTN level
  - Comprehensive OTN error and alarm statistics
  - OTN error performance measurement (G.8201 or M.2401)
  - ITU-T O.182-compliant FEC test
  - Delay measurement
  - OTN header edit and capture
  - OTN TCM monitoring and generation
  - Service disruption analysis using APS application
  - OTN tributary scan

MT1100A Product Highlights

Back to Index page

- OTN out-of-service testing
  - For installation and commissioning
  - For troubleshooting
  - OTN testing with far-end loopback

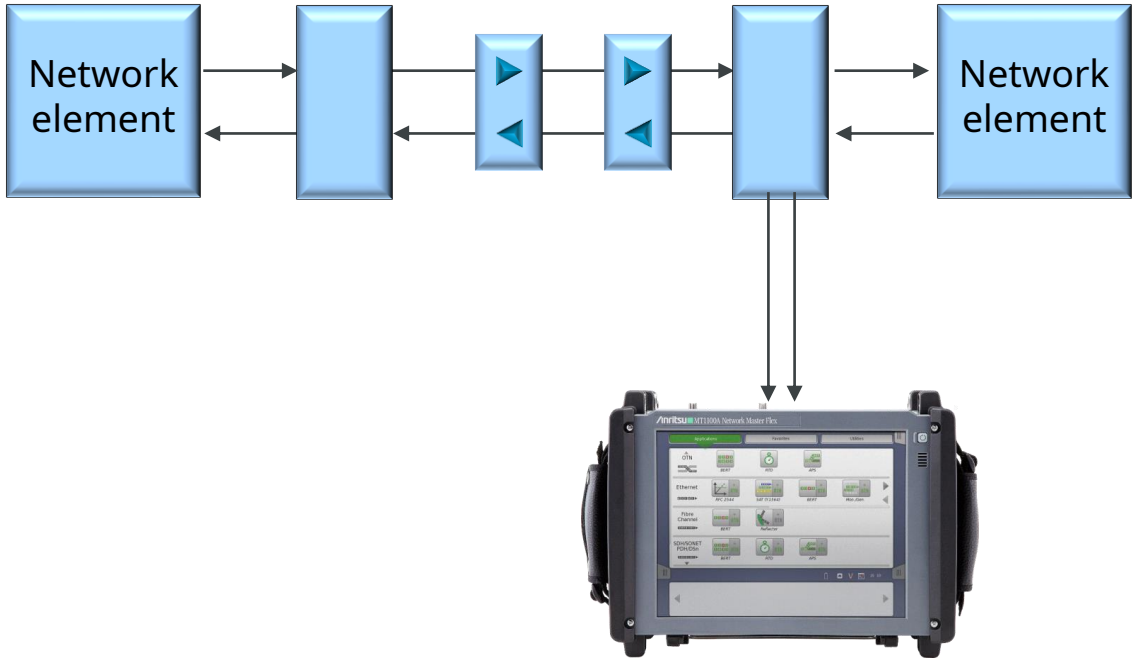
  - OTN testing with two instruments
    - Separate results for each side of line



MT1100A Product Highlights

Back to Index page

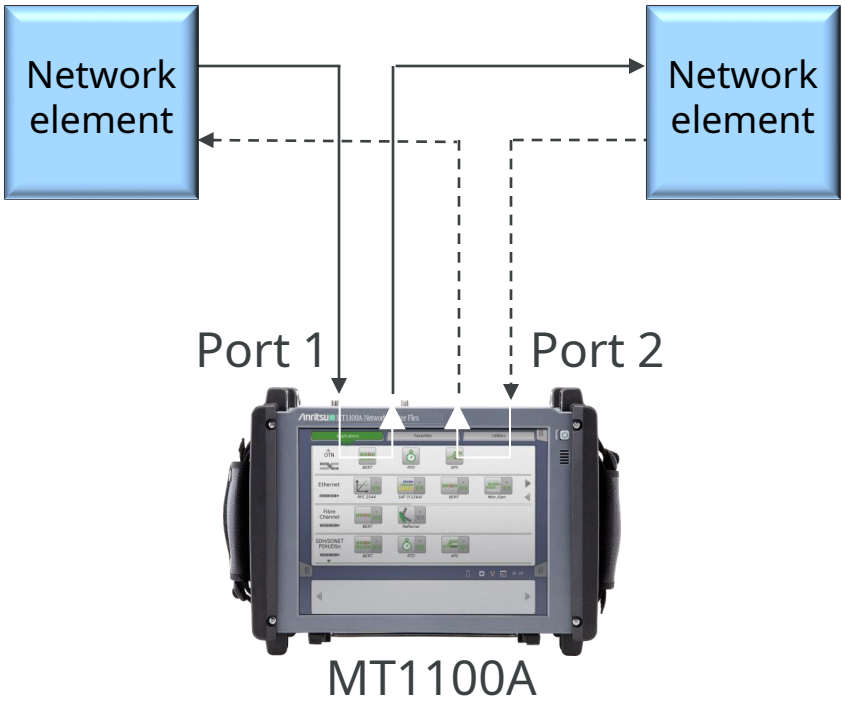
- OTN in-service testing
  - Troubleshooting live traffic
  - Connected at monitoring point



MT1100A Product Highlights

Back to Index page

- OTN in-service pass-through testing
  - Troubleshooting live traffic when no monitoring point



MT1100A Product Highlights

Back to Index page

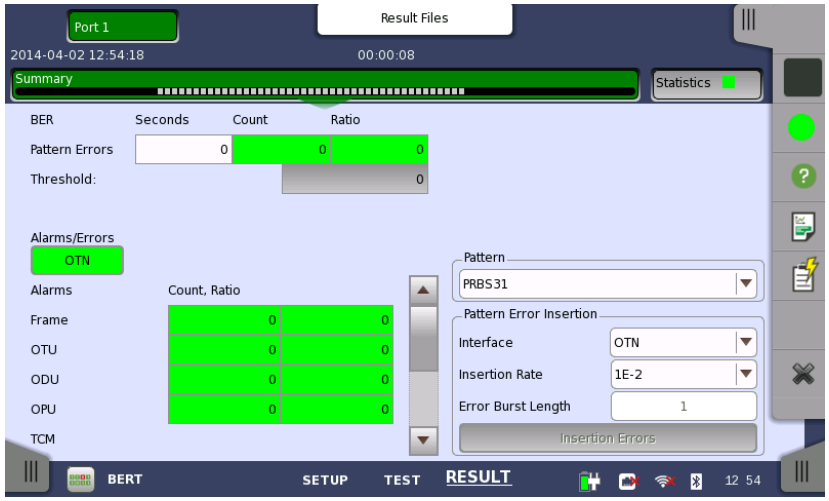
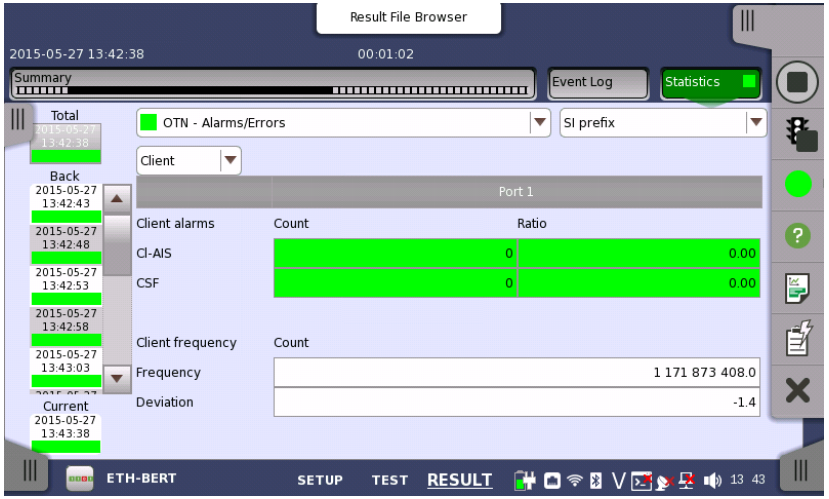
- OTN statistics
  - Summary page with main results
  - Additional pages with detailed statistics
  - GO/NO GO color coding gives easy overview of results

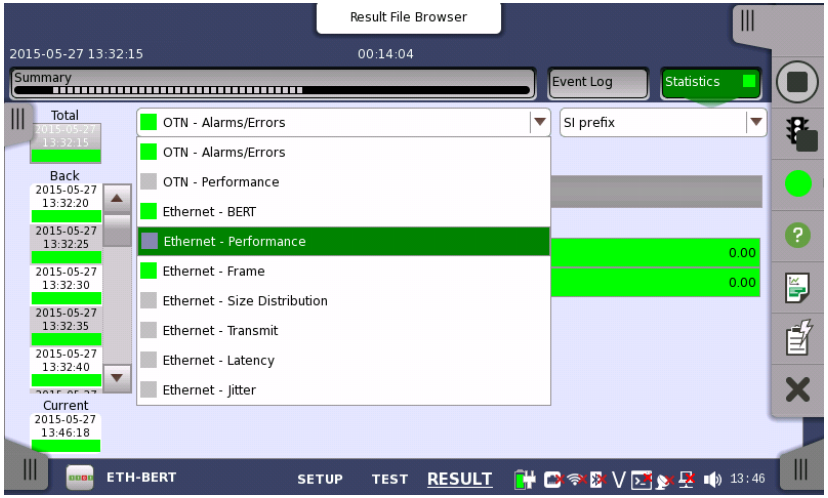


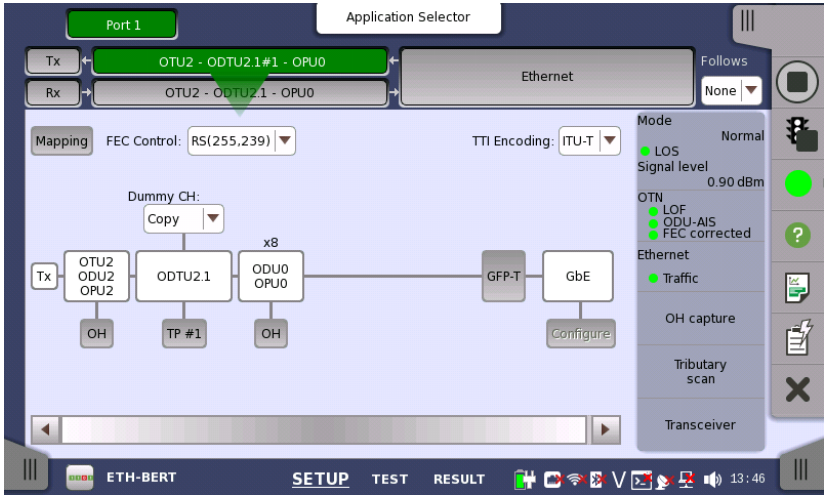
MT1100A Product Highlights

Back to Index page

- Ethernet in OTN
  - Statistics for OTN and embedded Ethernet signal in same measurement
  - Client signal frequency
  - Intuitive configuration map



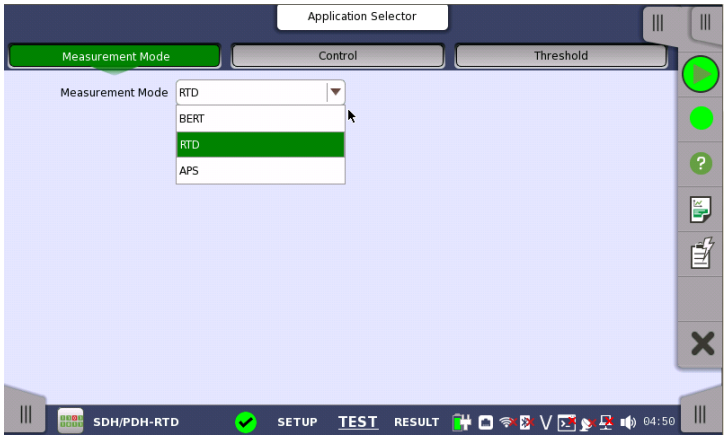


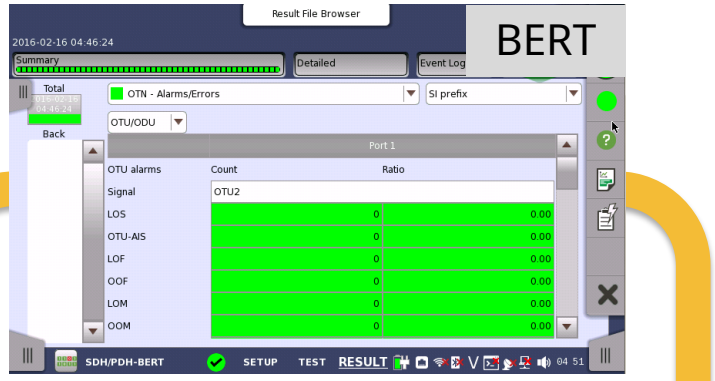


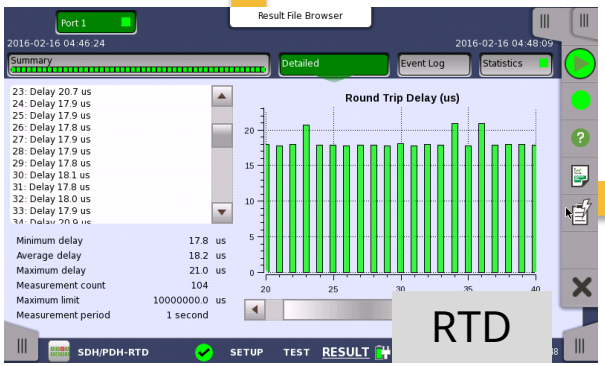
MT1100A Product Highlights

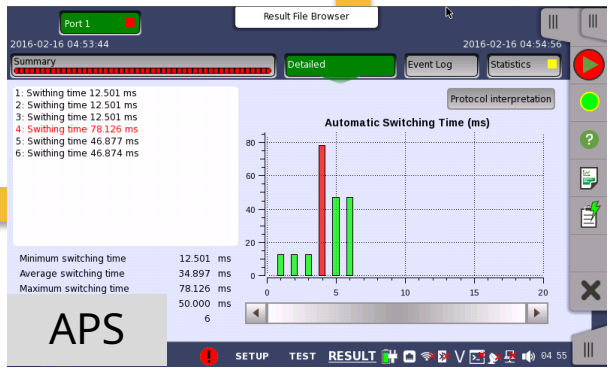
Back to Index page

- SDH/SONET/DSn/PDH in OTN
  - BERT applications and upgraded to switch without closing BERT, APS and RTD applications to improve operation efficiency





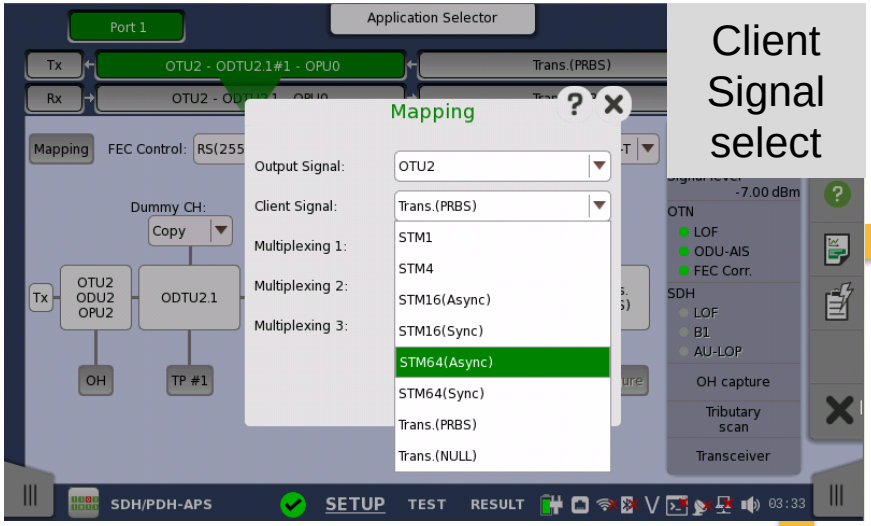


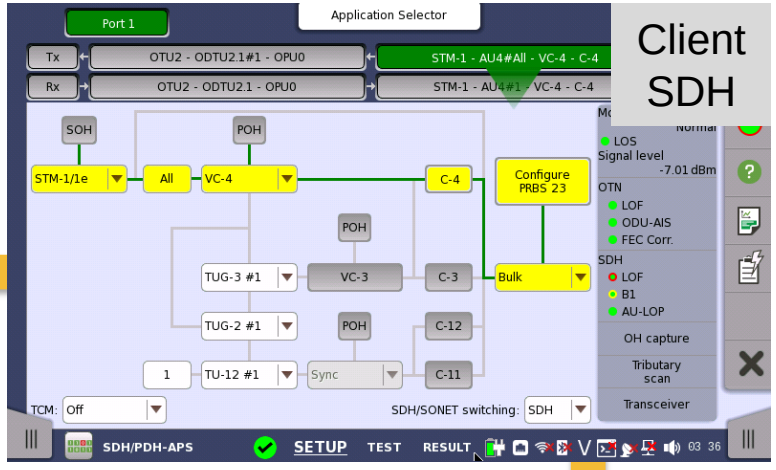


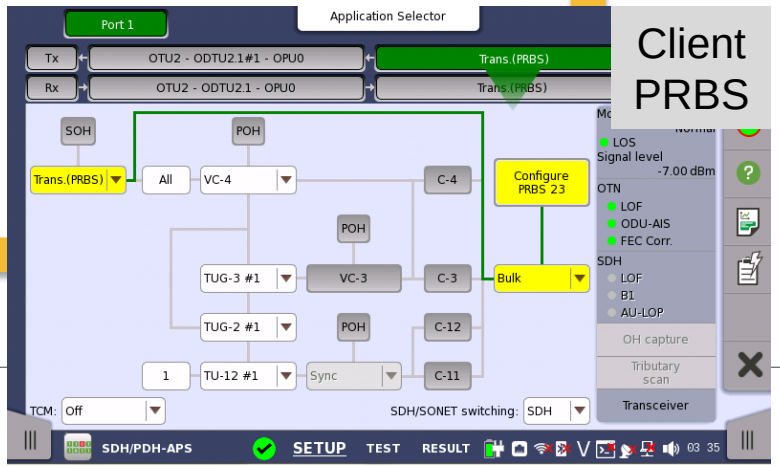
MT1100A Product Highlights

Back to Index page

- SDH/SONET in OTN
  - Upgraded Client signal selection method used for ATN mappings at SDH-OTN-BERT application, and enabled Client SDH and Client PRBS signal switching without closing applications to improve operation efficiency



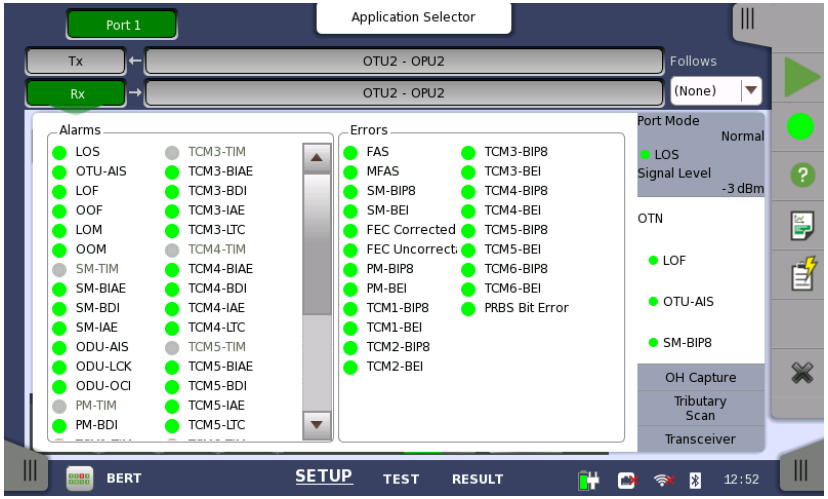


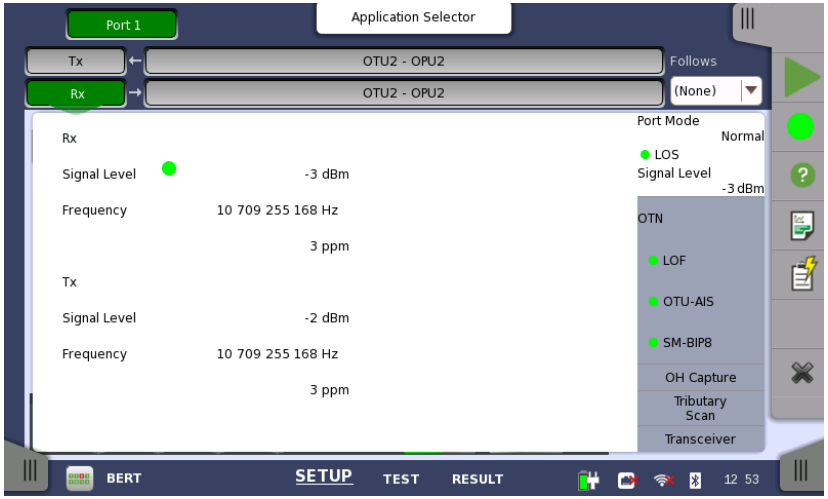


MT1100A Product Highlights

Back to Index page

- OTN status information
  - Overview of current status of alarms and errors
  - Optical level and rate information
  - GO/NO GO color coding gives easy overview of line status

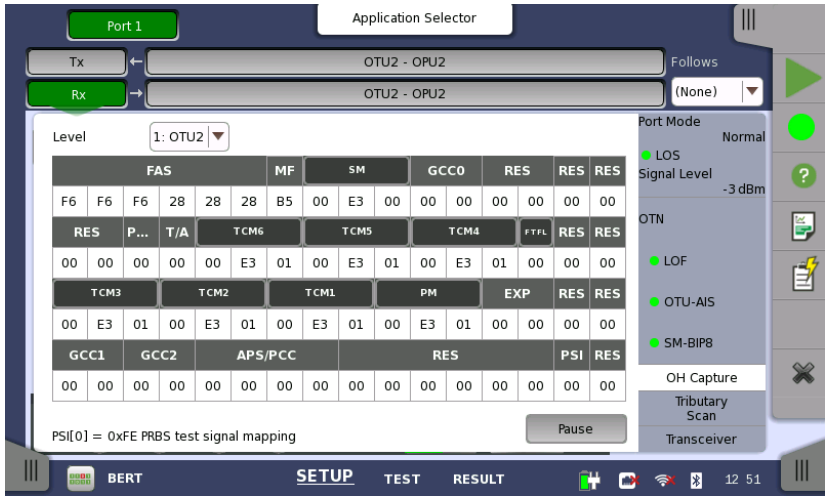




MT1100A Product Highlights

Back to Index page

- OTN Over Head (OH) Byte capture
  - Inspect OH bytes for detailed troubleshooting
    - Updates about every 1 second



MT1100A Product Highlights

Back to Index page

- Comprehensive OTN Testing—continued
  - ODUflex testing
    - ODUflex: New feature of OTN
    - Method for flexible allocation of bandwidth to client signal
      - Makes most efficient use of OTN capacity
    - Capacity of ODU2 split into eight 1.25G ODUflex time slots

    - In above example, FC-400 (4GFC) Fibre Channel signal occupies 4 ODUflex time slots, freeing other four ODUflex time slots in ODU2 for other payloads
    - MT1100A supports ODUflex testing, allowing operators deploying new technology to verify working correctly throughout network

MT1100A Product Highlights

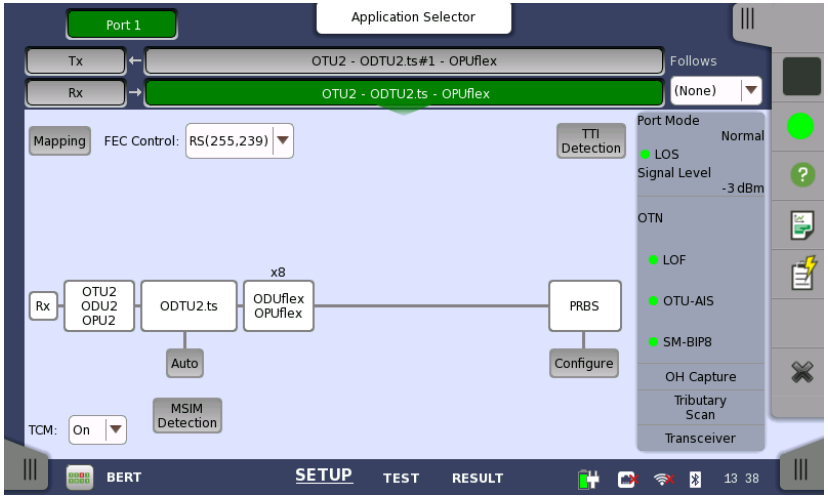
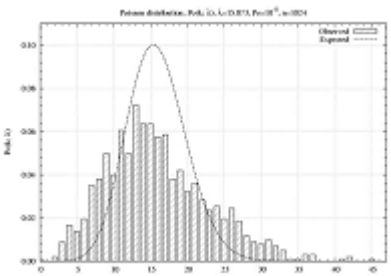
- ODUflex
  - Configuration and results



MT1100A OTN FEC Test

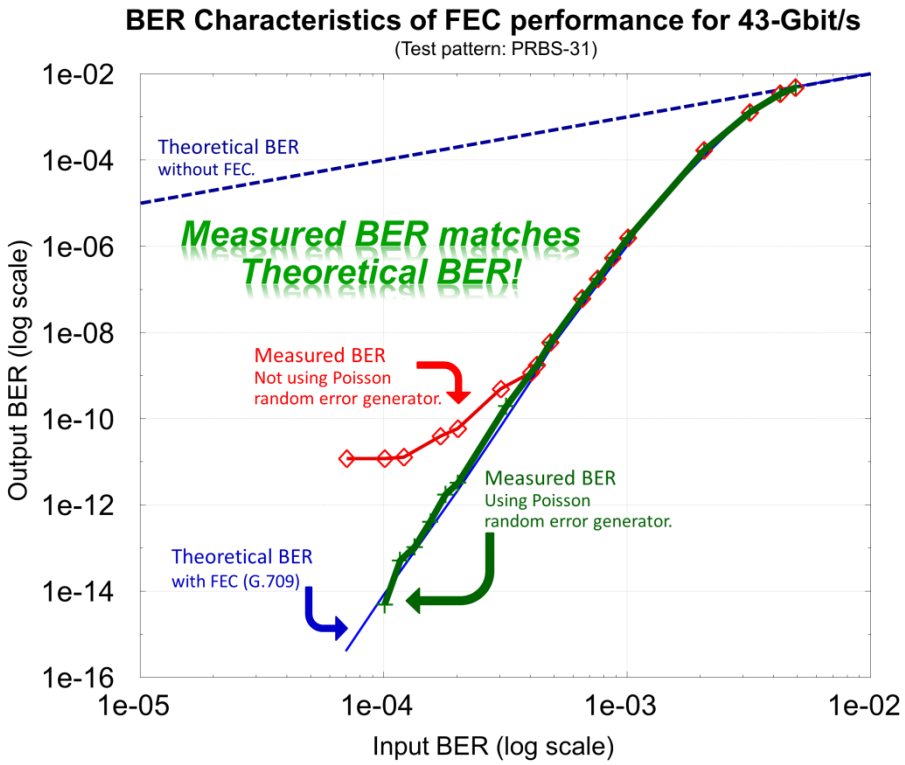
Back to Index page

- ITU-T O.182 Compliant FEC Test
  - Anritsu's proposed FEC performance tests using Poisson distribution random errors adopted by ITU-T O.182 in July 2007
  - Reproducible/accurate FEC error correction tests by generating random signal errors (Poisson distribution)



Bad Random Distribution

Good Random Distribution

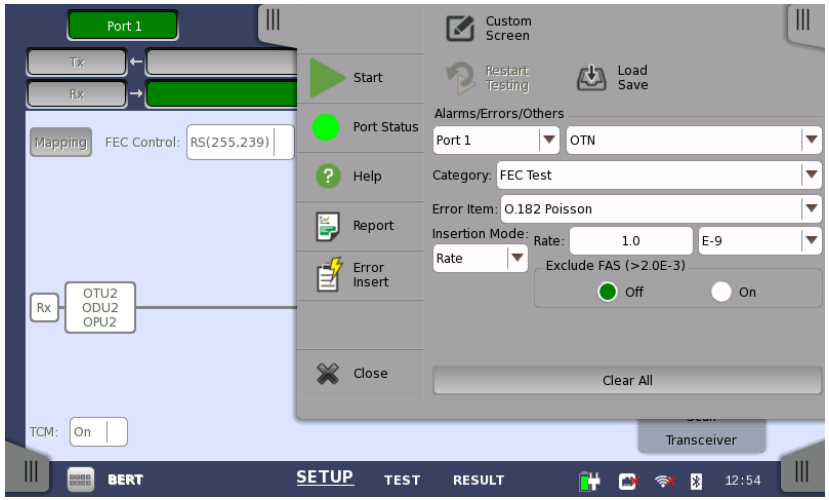


Error Correction Curve

MT1100A OTN FEC Test

Back to Index page

- ITU-T O.182 Compliant FEC Test
  - FEC error insertion with MT1100A



Network Master Flex MT1100A

Back to Index page

- Quick and Easy Tests of SDH/SONET/PDH/DSn Networks

MT1100A Product Highlights

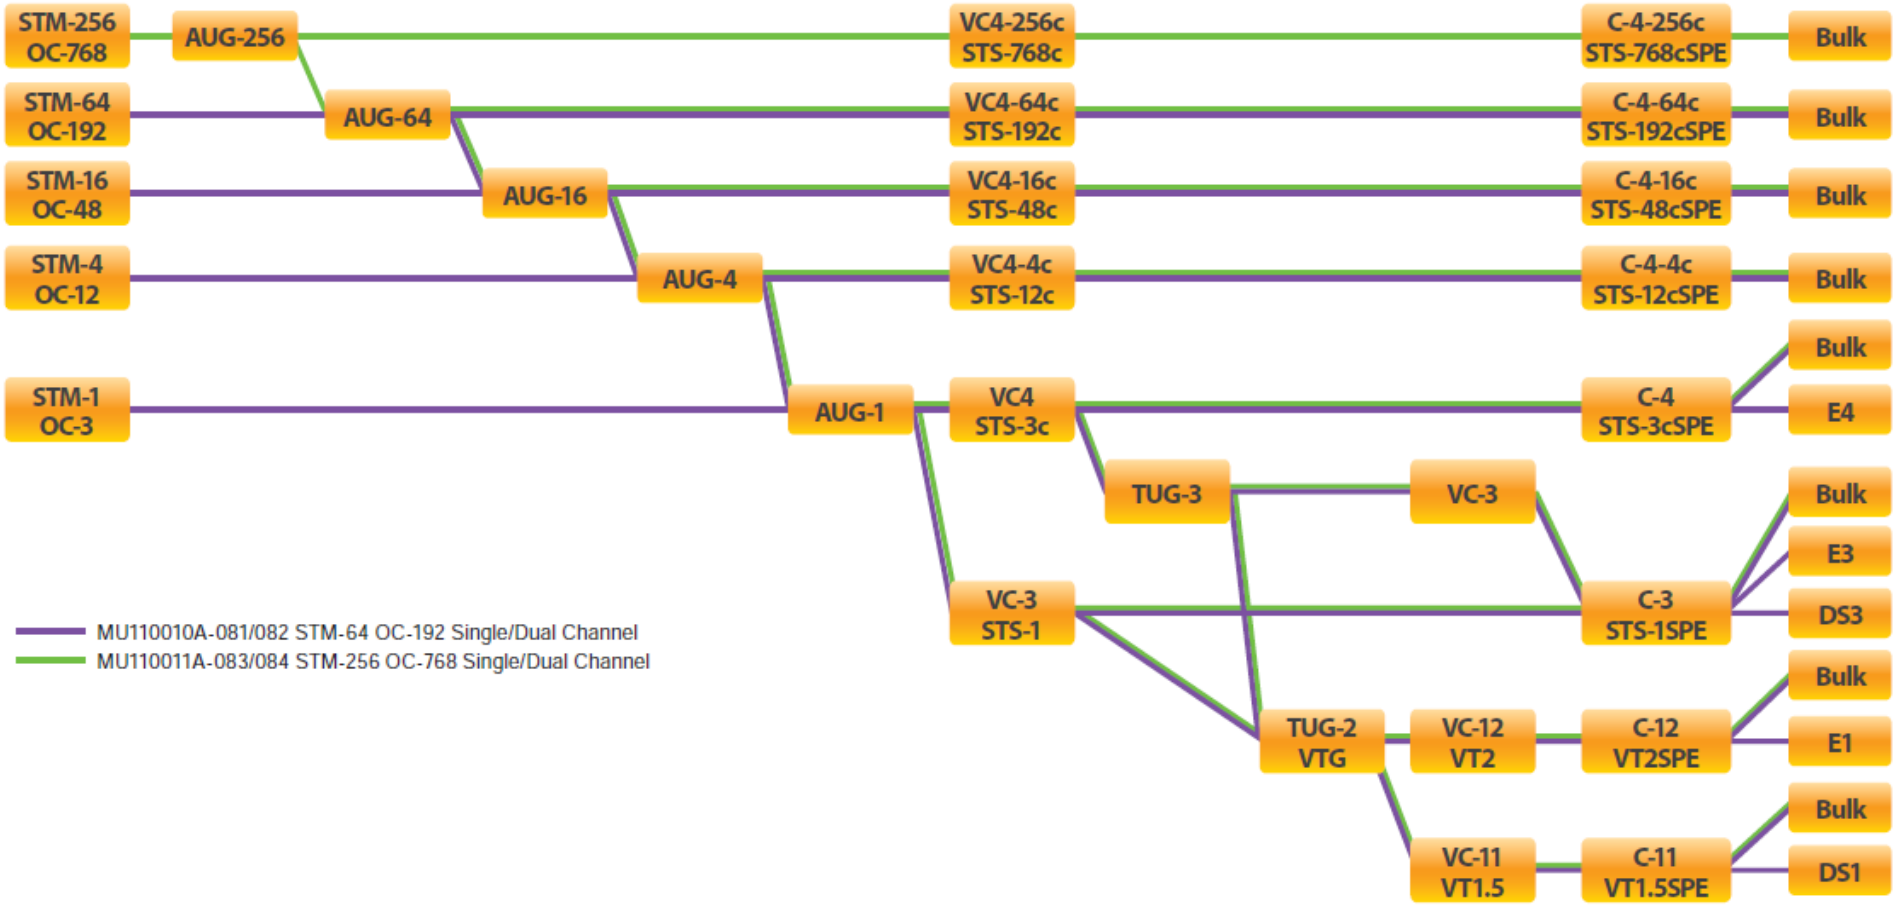
Back to Index page

- Quick and easy tests of SDH/SONET/PDH/DSn
  - Testing SDH/SONET systems at STM-256/STM-64/STM-16/STM-4/STM-1/OC-768/OC-192/OC-48/OC-12/OC-3/STS-3 and embedded PDH (E1/E3/E4) and DSn (DS1/DS3) systems
  - Powerful PDH (E1/E3/E4) and DSn (DS1/DS3) testing
  - Simultaneous bi-directional monitoring of SDH/SONET/PDH/DSn lines
  - SDH/SONET mapping and de-mapping
  - Comprehensive error and alarm statistics
    - G.826/G.828/G.829/M.2100 error-performance measurements on SDH/SONET traffic
    - G.826/M.2100 error-performance measurements on PDH/DSn traffic
  - SDH/SONET OH byte testing and monitoring
  - SDH/SONET trouble scan
  - SDH/SONET pointer event generation and monitoring
  - SDH/SONET/PDH/DSn delay measurements

MT1100A Product Highlights

Back to Index page

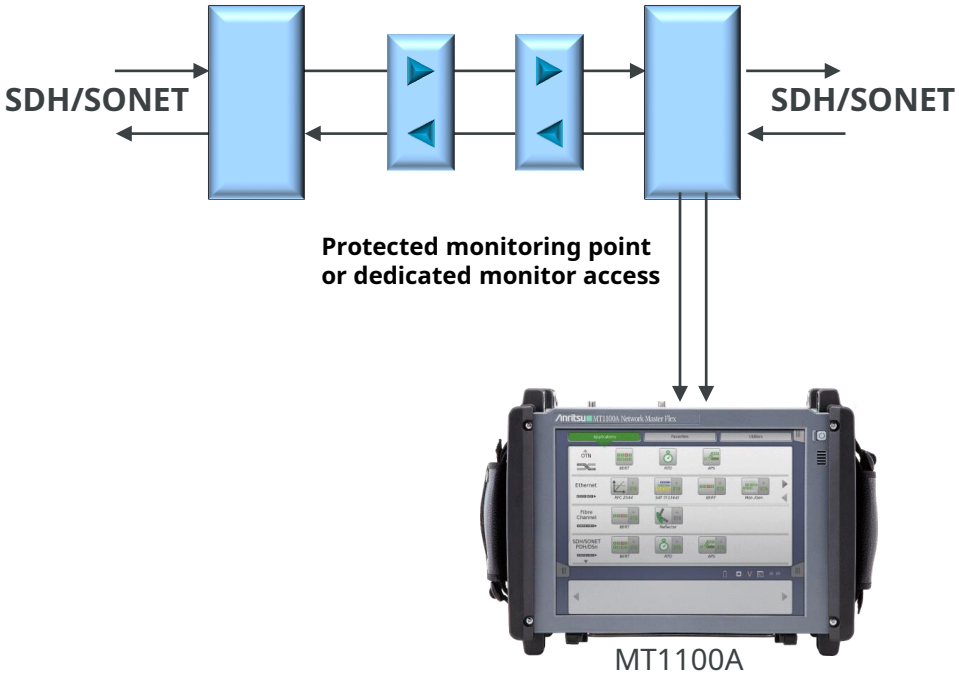
- SDH/SONET mappings

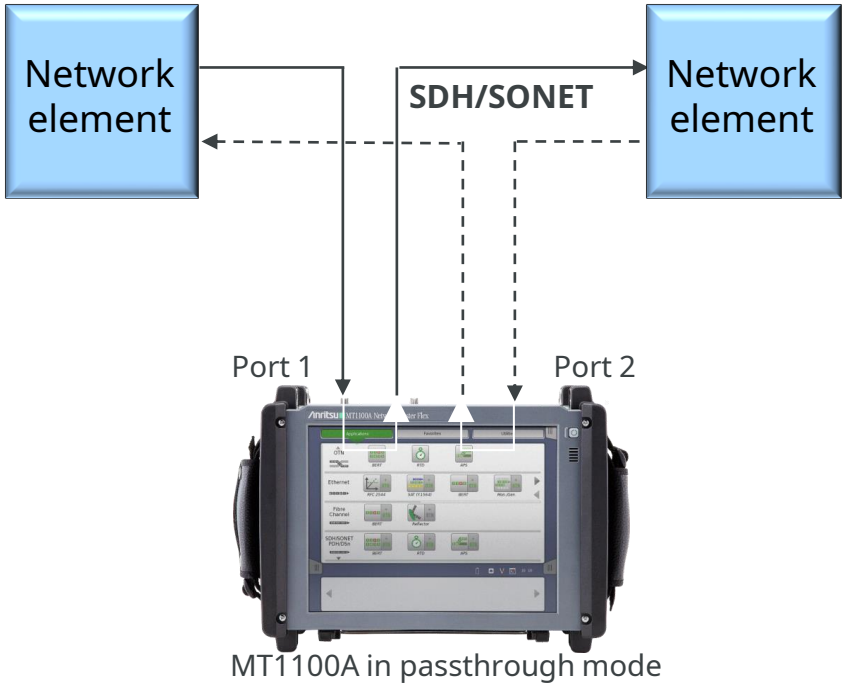


MT1100A SDH/SONET In-Service Measurements

Back to Index page

- Alarm and error monitoring for both sides of SDH/SONET line
- Frequency-deviation measurements
- G.826/G.828/G.829/M.2100 error-performance measurements on live traffic

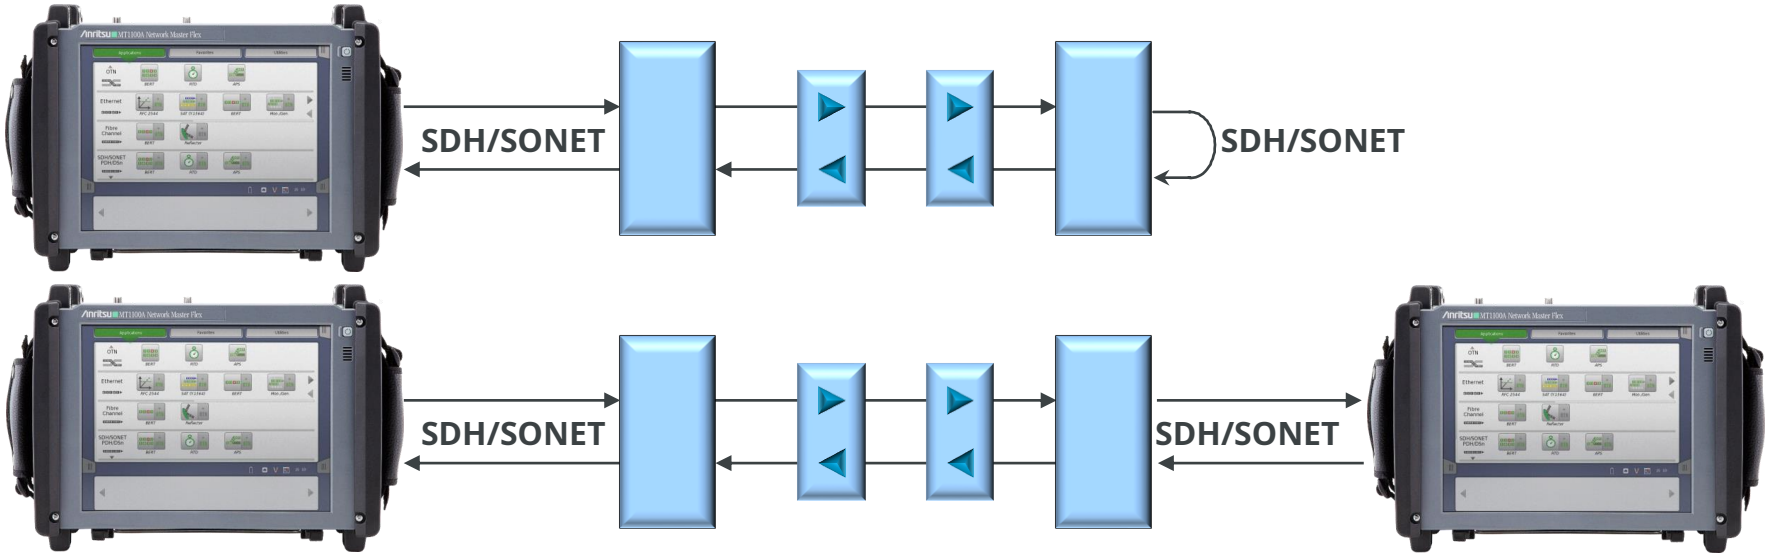




MT1100A SDH/SONET Out-of-Service Testing

Back to Index page

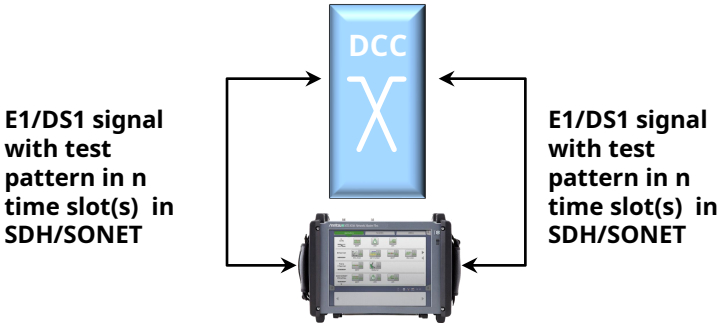
- Installing, commissioning and troubleshooting SDH/SONET lines
- Stressing system by generating alarms, errors, pointer operations, slip and frequency offset
- Testing synchronization circuits
- Generating embedded PDH/DSn signals
- G.826/G.828/G.829/M.2100 error performance
- Propagation time
- Alarm, error, slip and frequency-deviation measurements

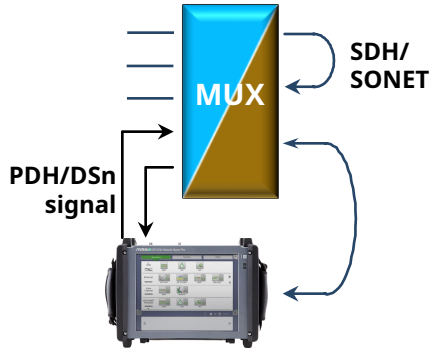


MT1100A SDH /SONET Out-of-Service Testing

Back to Index page

- Installing/commissioning
- G.826/G.828/G.829/M.2100 error-performance measurements
- System stressing by generating alarms, errors, slip and frequency offset
- Testing synchronization circuits
- Alarm, error, drift and frequency-deviation measurements
- Propagation time measurements

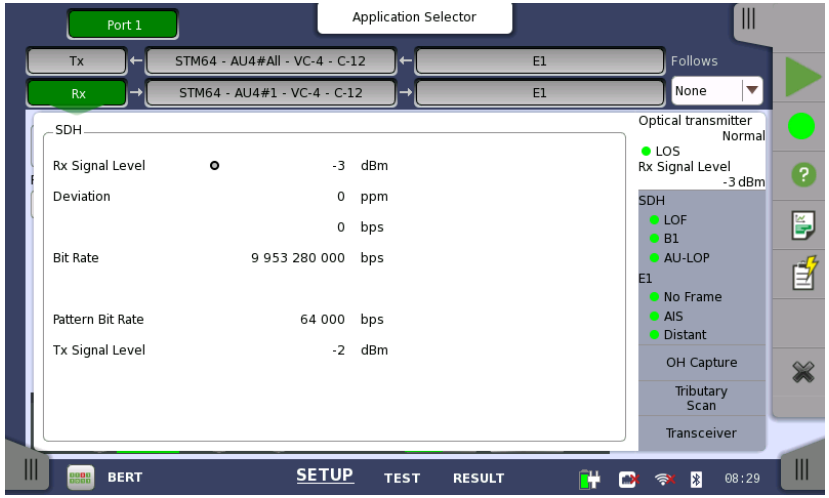


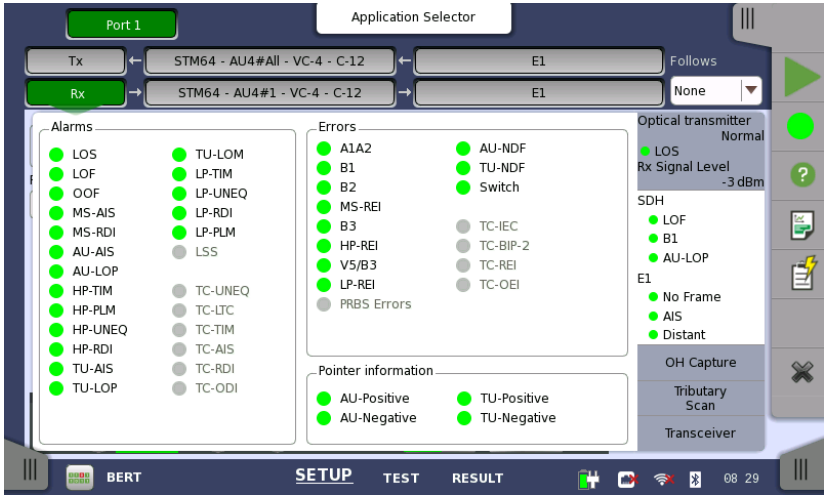


MT1100A SDH/SONET Line Status

Back to Index page

- Physical line information
- Current alarms and errors

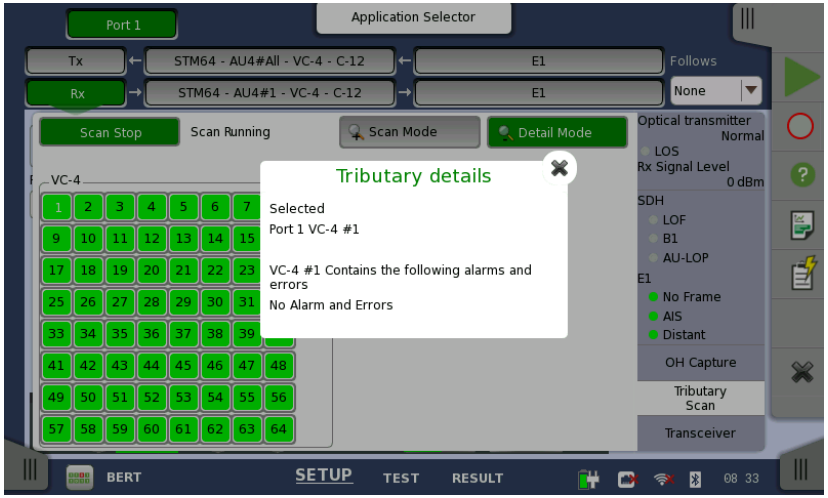




MT1100A SDH/SONET Tributary Scan

Back to Index page

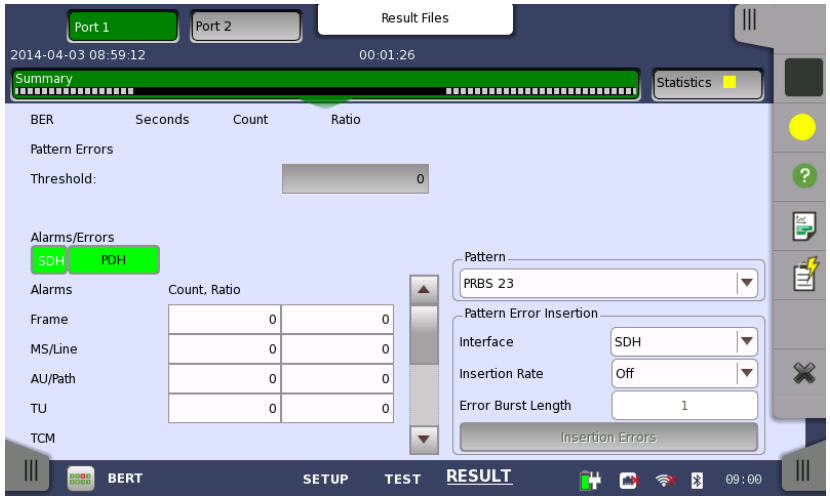
- Quick overview of problems in monitored SDH/SONET signals
- Detailed problem description when required
  - Click tributary for more details

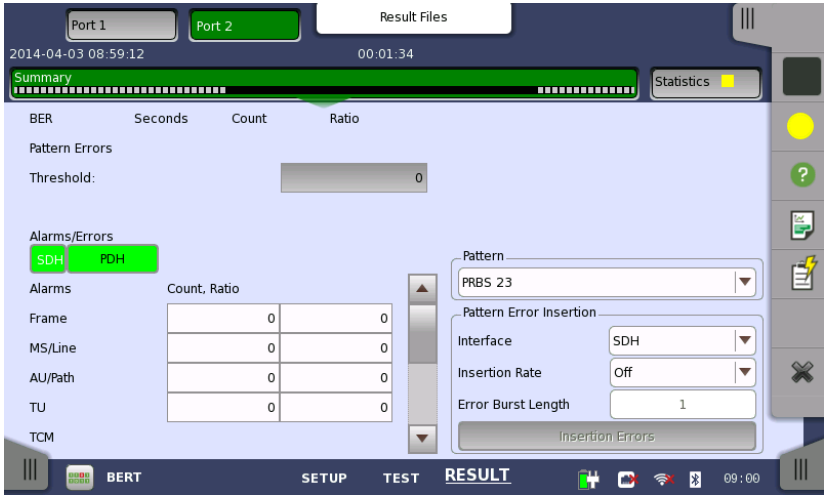


MT1100A SDH/SONET Performance Measurements

Back to Index page

- Bi-directional performance measurement
  - Easy information switching between two ports
- BER measurements of embedded PDH/DSn signal

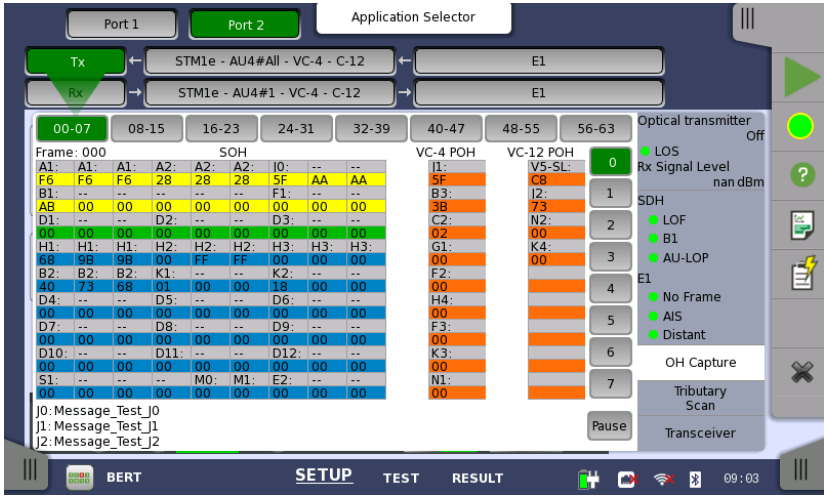


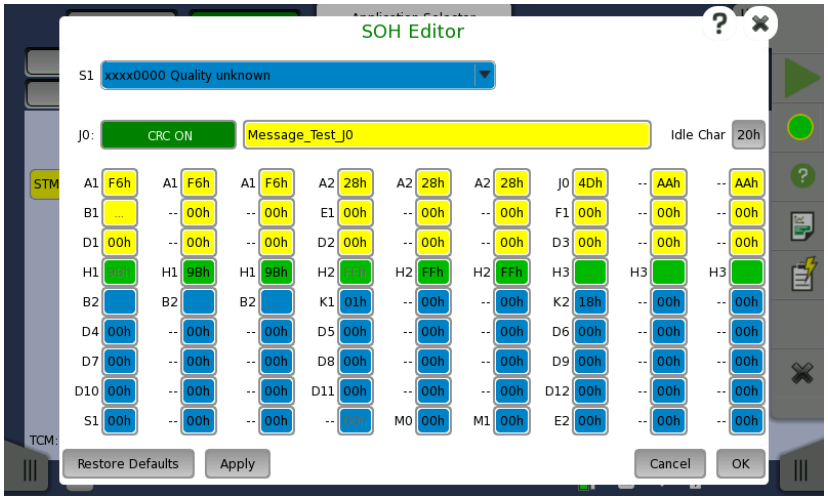


MT1100A SDH/SONET Overhead Byte Analysis

Back to Index page

- Bi-directional OH byte capture
- User-programmable transmitted OH bytes

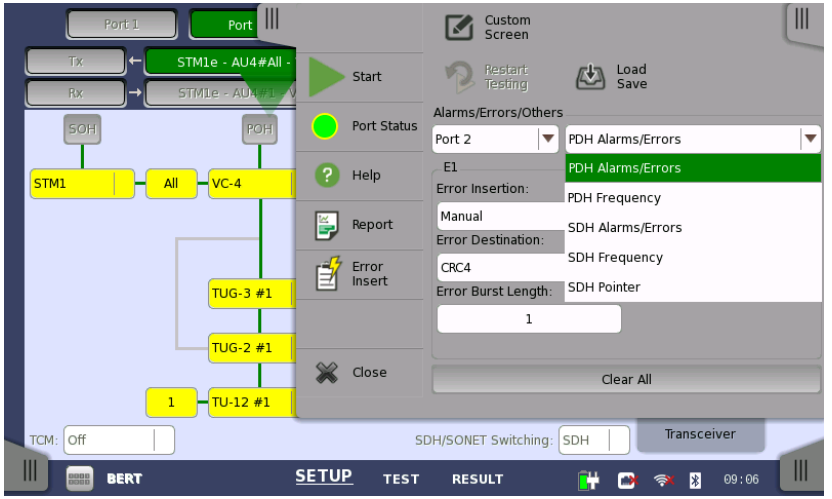




MT1100A SDH/SONET Event Insertion

Back to Index page

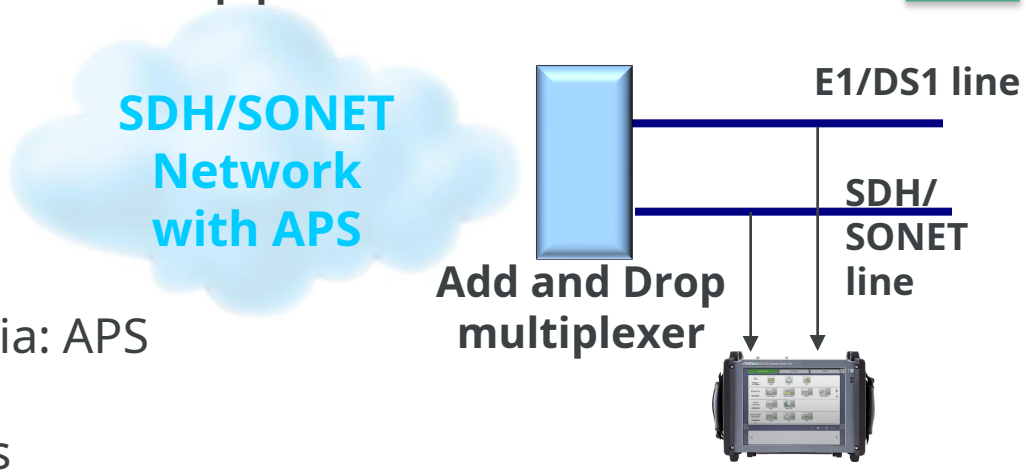
- Stress-test network elements by inserting events in test signal
- Inserted Events:
  - Alarms
  - Errors
  - Frequency deviations
  - Pointer operations



MT1100A SDH/SONET APS Test Application

Back to Index page

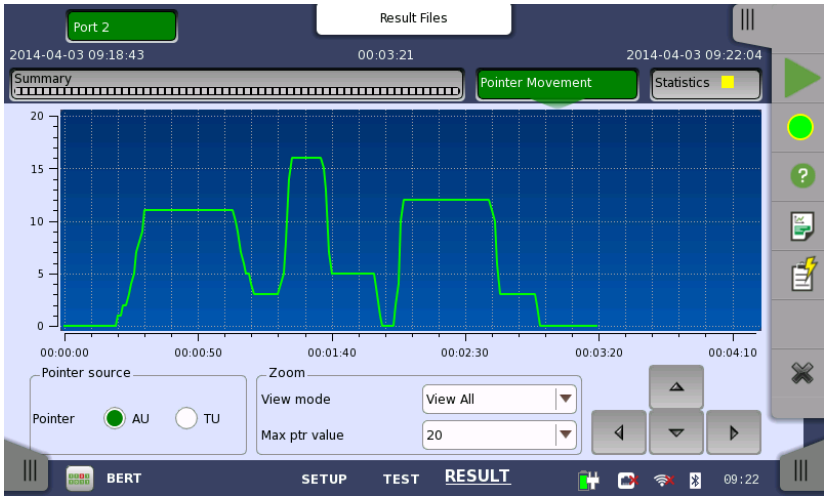
- Max switchover time measurement
  - User-defined max. time
  - User-defined switching criteria: APS measurement triggered by SDH/SONET or E1/DS1 events
  - Average time display
- APS protocol events can be generated and detected
  - No. of switchovers based on APS protocol events count
- Measurement at two receivers for simultaneous APS protocol event monitoring and switch time measurement



MT1100A SDH/SONET Pointer Movement Graph

Back to Index page

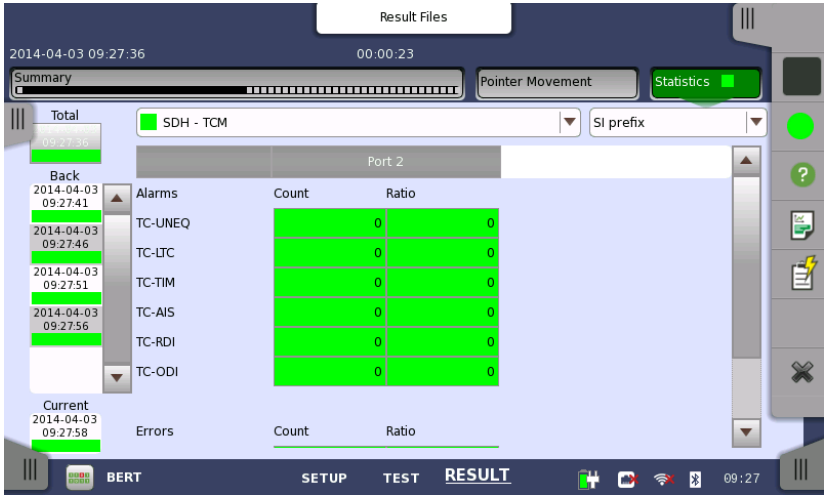
- Graph of pointer movements
  - Good overview of pointer operations
- Information on AU and TU pointer
- Magnify graph points of interest
- Results stored in MT1100A memory



MT1100A SDH/SONET TCM Functions

Back to Index page

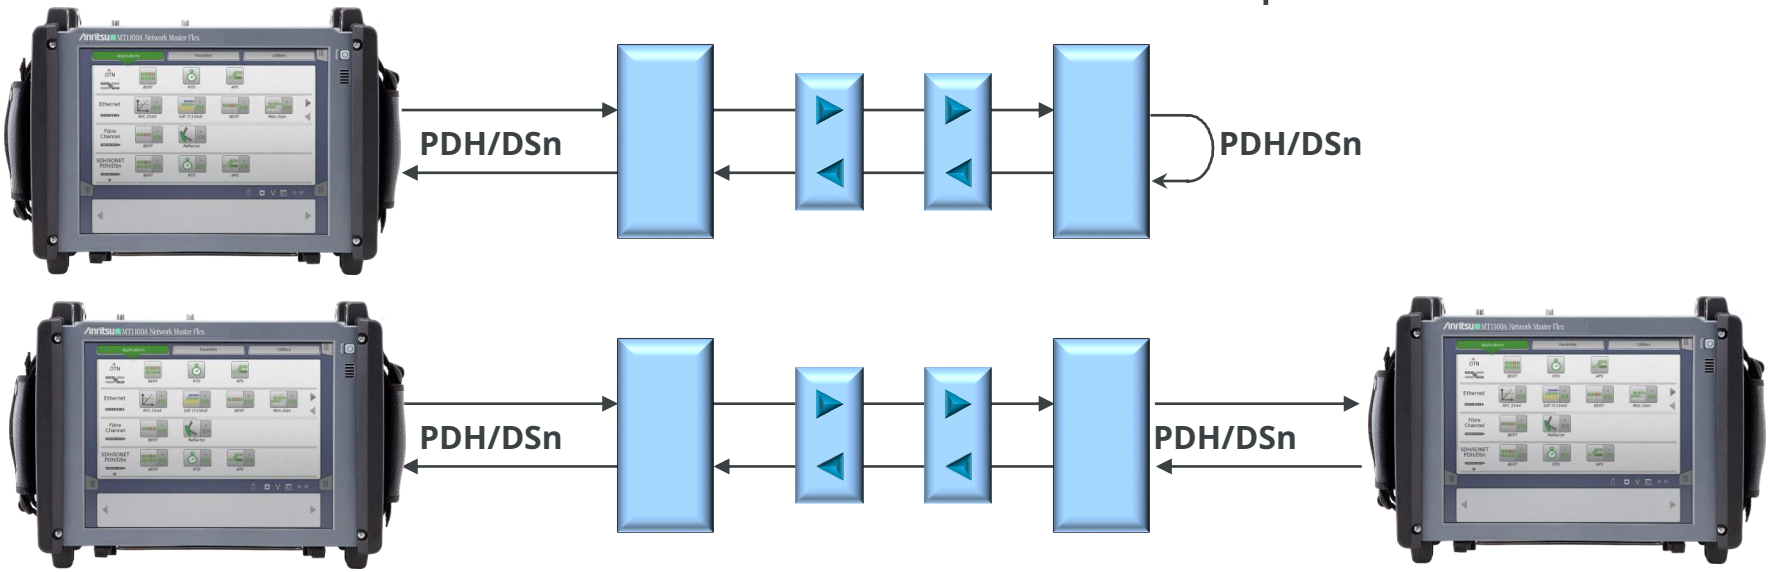
- Analyze TCM (Tandem Connection Monitoring) function in SDH/SONET systems
  - Simultaneous bi-directional monitoring of TCM information on SDH/SONET lines
  - Comprehensive TCM error and alarm statistics
  - Inject TCM events to stress-test network elements



MT1100A PDH/DSn Out-of-Service Testing

Back to Index page

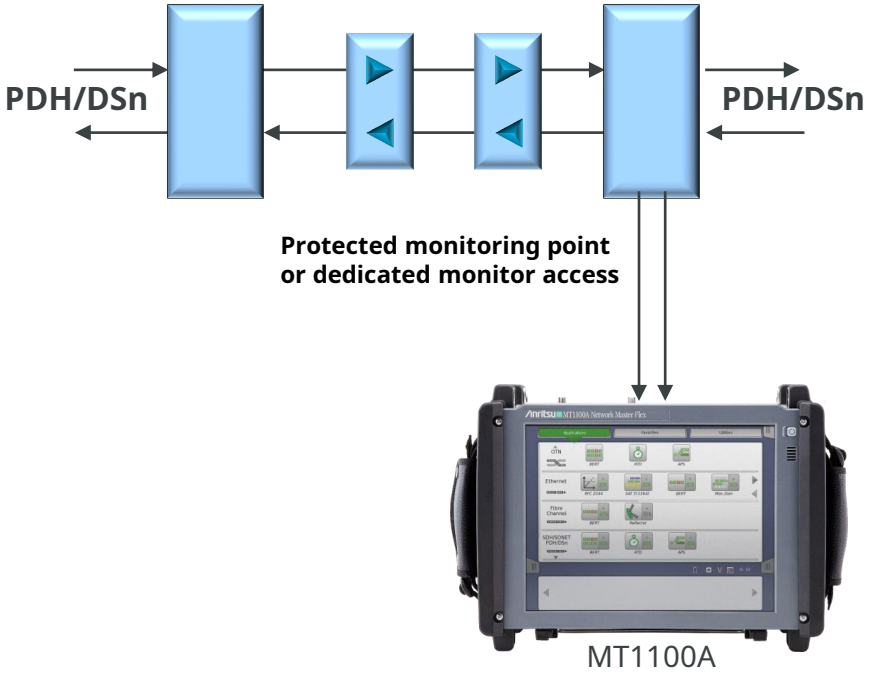
- Installing, commissioning and troubleshooting PDH/DSn lines
- Stress system by generating alarms, errors, slip and frequency offset
- Testing synchronization circuits
- G.821(E1/DS1)/G.826/M.2100 error performance
- Alarm, error, slip and frequency-deviation measurements
- Propagation time with far-end loopback



MT1100A PDH/DSn In-Service Measurements

Back to Index page

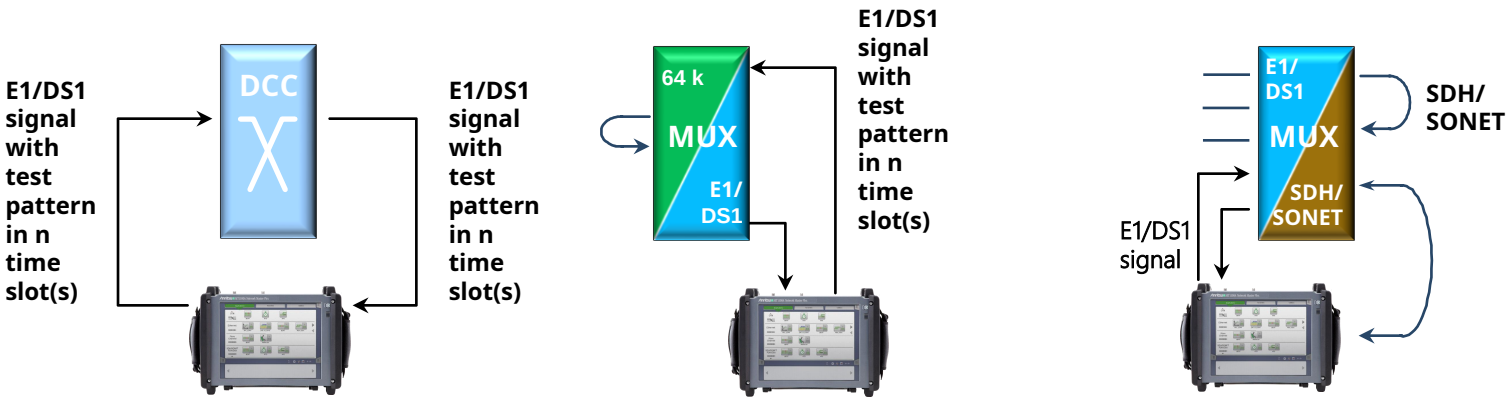
- Alarm and error monitoring at both sides of PDH/DSn line
- Frequency-deviation measurements
- G.821(E1/DS1)/G.826/M.2100 error-performance measurements on live traffic



MT1100A E1/DS1 Network-Element Testing

Back to Index page

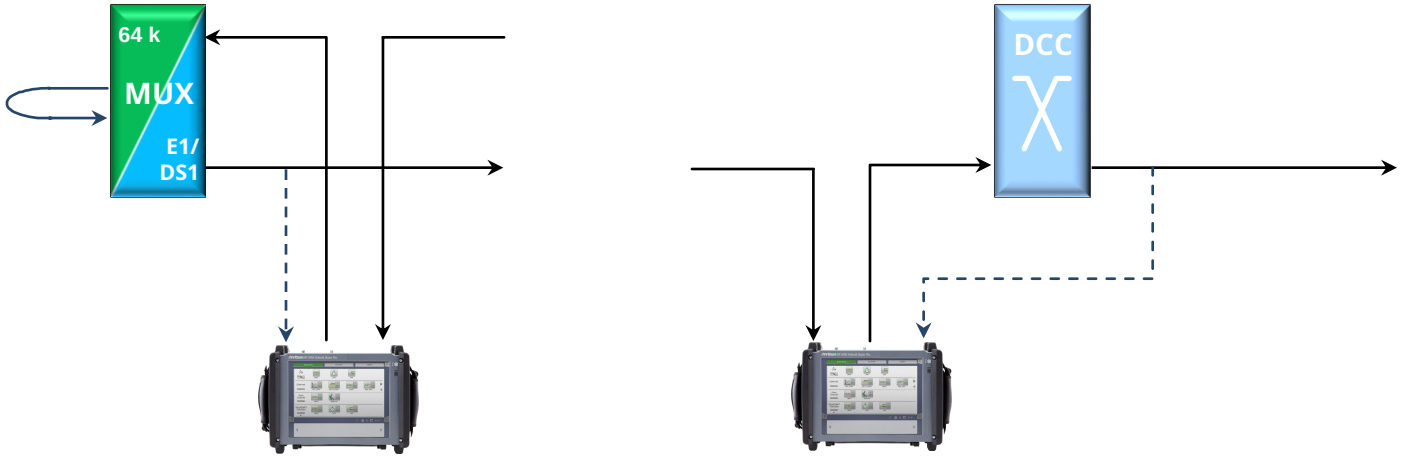
- Installing/commissioning
- G.821, G.826 or M.2100 error-performance measurements
- System stressing by generating alarms, errors, slip and frequency offset
- Testing synchronization circuits
- Alarm, error, slip and frequency-deviation measurements
- Propagation time measurements



MT1100A E1/DS1 Drop-and-Insert Testing

Back to Index page

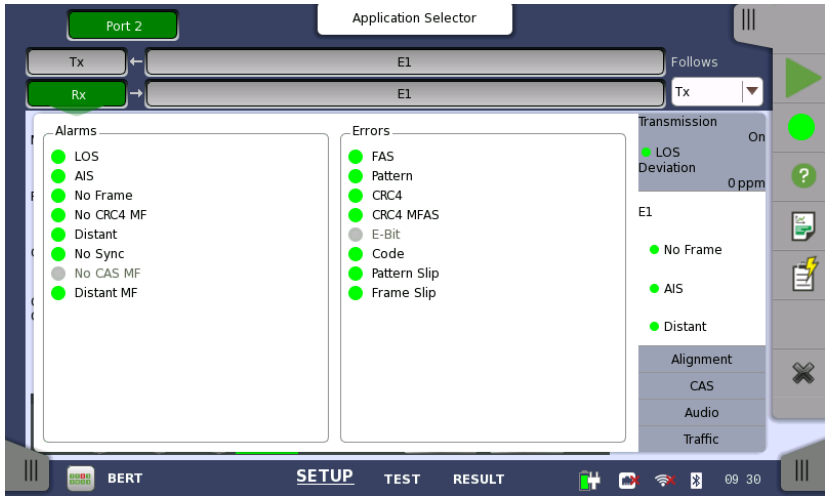
- Pseudo in-service testing on live PCM systems
- Add and drop N*64 kbps signals
- Alarm, error and slip generation and measurement
- Inject errors in live traffic channel
- G.821, G.826 or M.2100 error-performance
- Frequency deviation

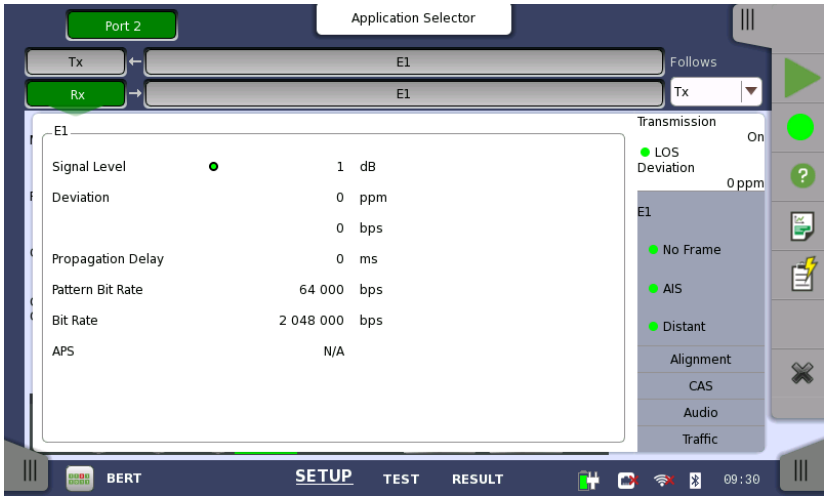


MT1100A PDH/DSn Line Status

Back to Index page

- Physical line information – display of current:
  - Input frequency and deviation
  - Input-level indication
  - Pattern bit rate
- Current alarms and errors



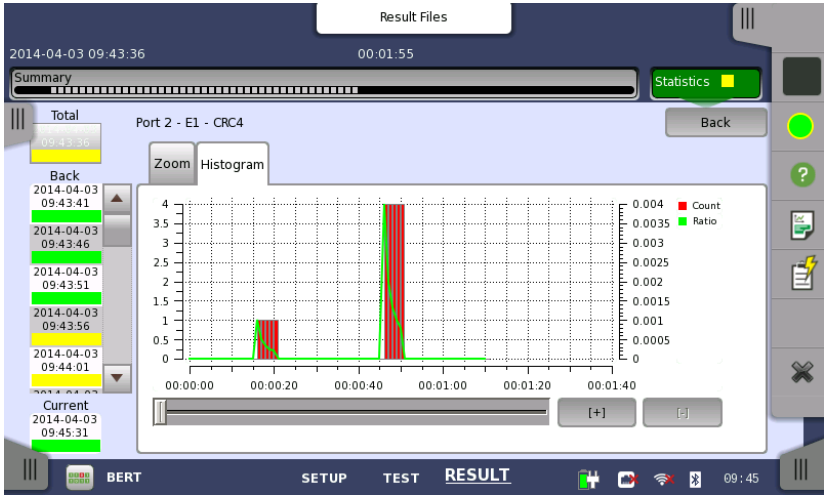


MT1100A PDH/DSn Alarm and Error Statistics

Back to Index page

- Alarm-second counts and ratios
- Error counts and ratios
- M.2100, G.826 or G.821 parameters

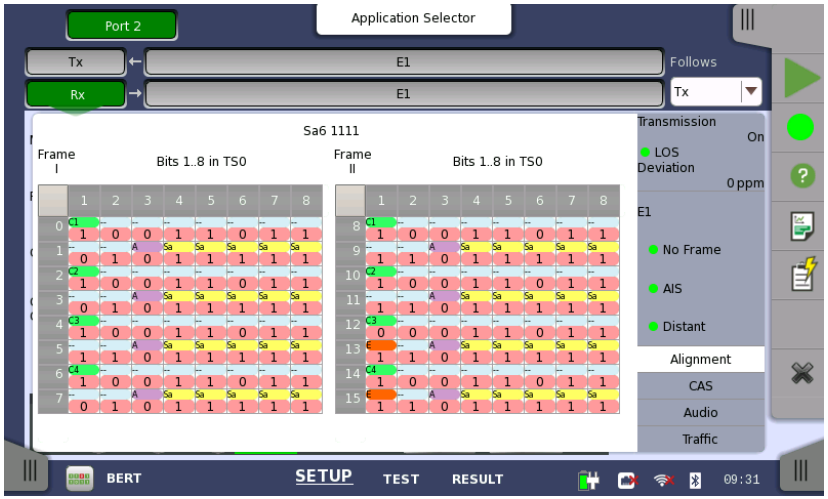
- Histograms show measurement overview
  - Click parameter to activate histogram

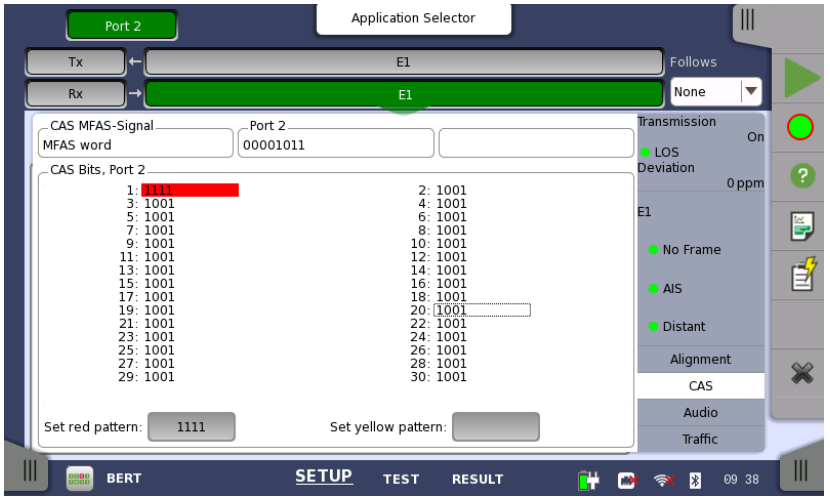


MT1100A E1 Alignment and CAS Displays

Back to Index page

- Information on FAS words and Sa bits
- Information on CAS bits
  - User-selectable bit pattern for red and yellow colors

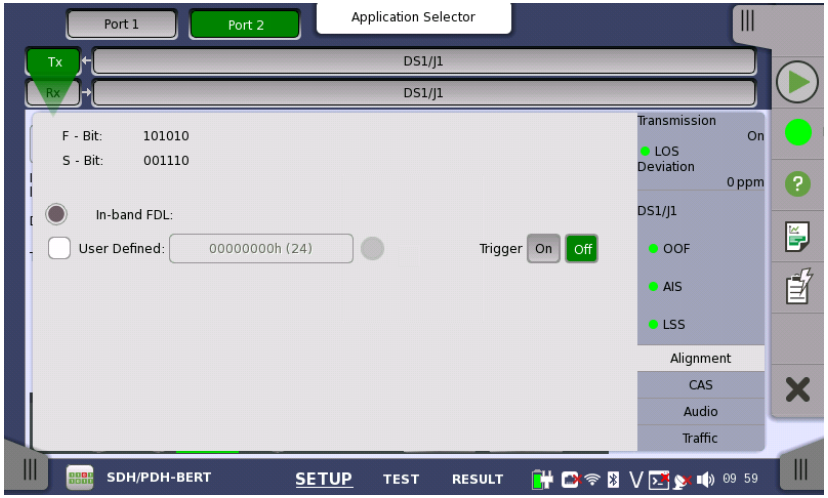


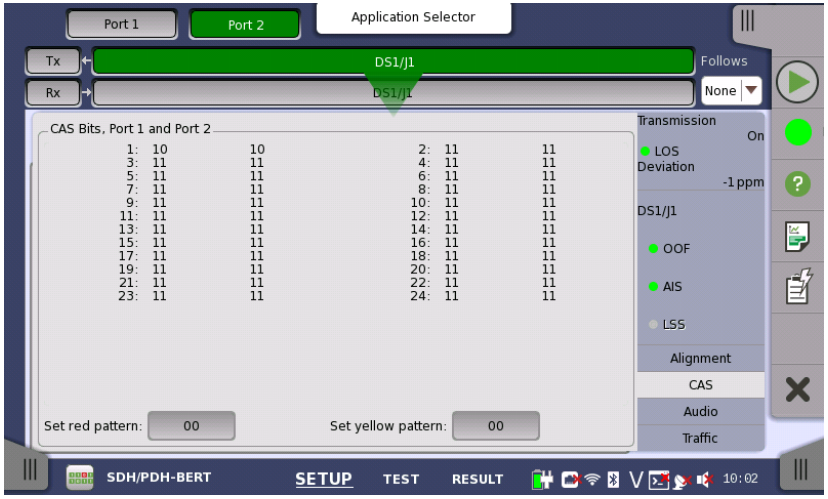


MT1100A DS1 Alignment and CAS Displays

Back to Index page

- Information on F-bits and S-bits
- Information on CAS bits
  - User-selectable bit pattern for red and yellow colors

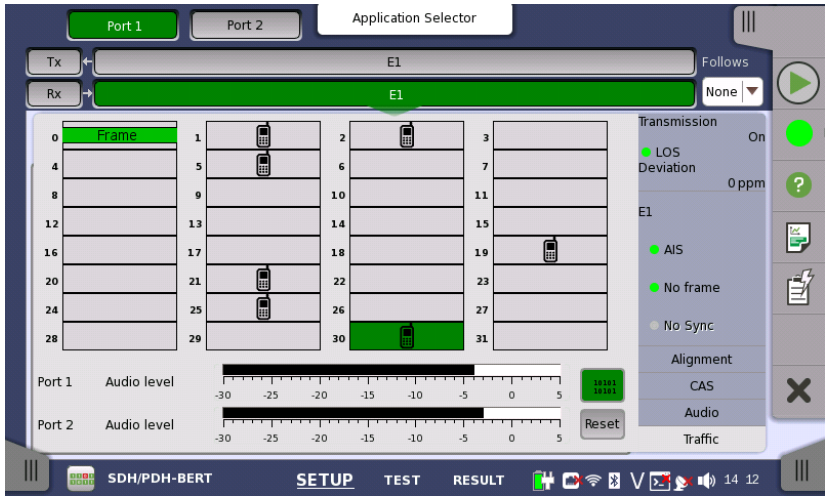


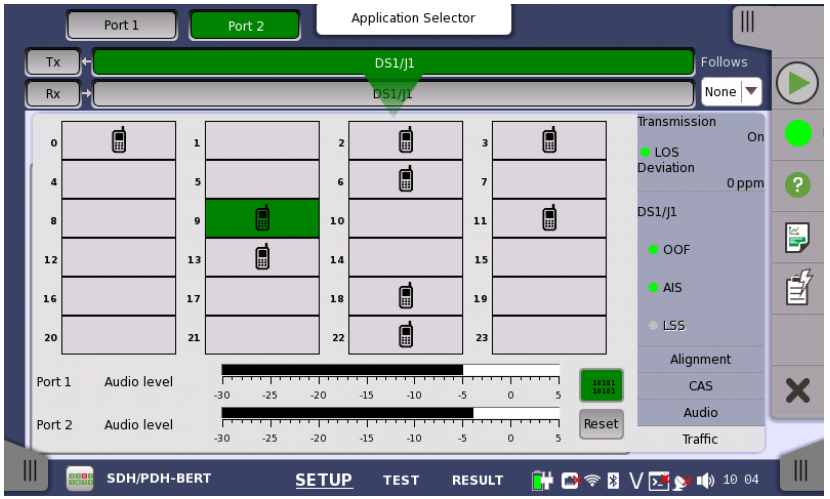


MT1100A E1/DS1 Channel Status Display

Back to Index page

- Fast overview of E1/DS1 line status





MT1100A E1/DS1 Audio Display

Back to Index page

- Details on contents of one selected traffic channel
  - Displays information from two ports for bidirectional monitoring

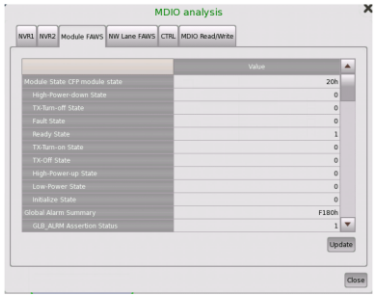
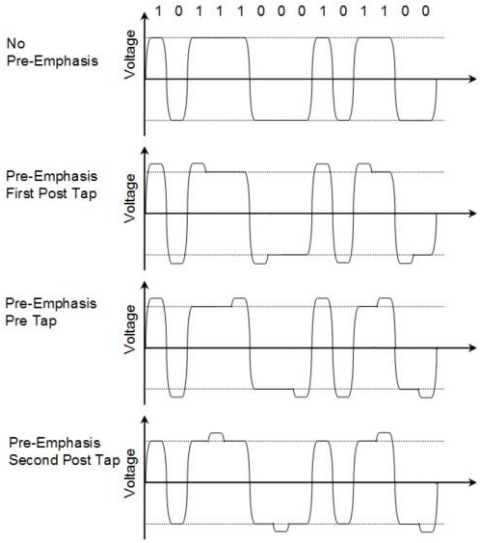
- PCS electrical interface control
  - CFP: VOD, Pre-Emphasis, RX Equalizer
  - CFP2: Attenuation, Pre-Emphasis, RX Equalizer



CFP

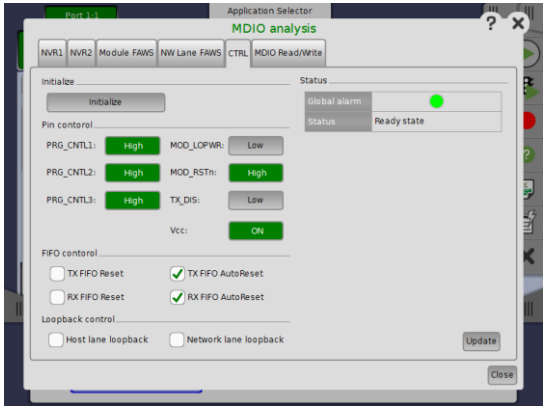
CFP2



Optical Transceiver analysis

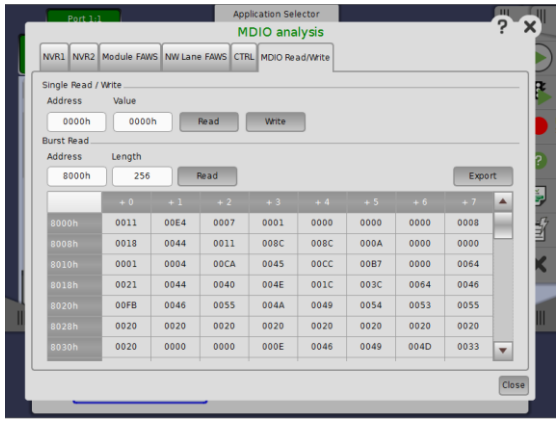
Back to Index page

- Added functions for manual control of optical module hard pins and for dumping internal register data to MDIO Analysis function for displaying CFP/CFP2/CFP4 optical module data and confirming faults



■ Applications
- Forced reset and initialization tolerance test
- Confirmation of hardware pin status operation
  User can analyze whether start sequence completed or faulty, and sequence transitions
- Fault troubleshooting using CFP initialization and internal FIFO reset

■ Extended Functions
- Initialization of CFP/CFP2/CFP4 module (restart start sequence)
- Control of hardware pins
- Reset internal FIFO



■ Applications
- Test CFP/CFP2/CFP4 internal register access
- Compare internal register status and basic settings
  User can find unintended settings, status, and operations

■ Extended Functions
- Displays burst register read/write and results
  - Reads up to 1024 registers
  (about same size as one internal register group, such as NVR1, defined by MSA)
  - Sets read start address
  - Outputs read results in csv file format

Network Master Flex MT1100A

Back to Index page

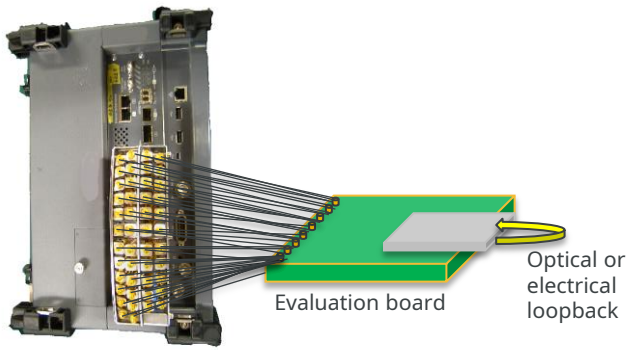
- PCS Lane Testing

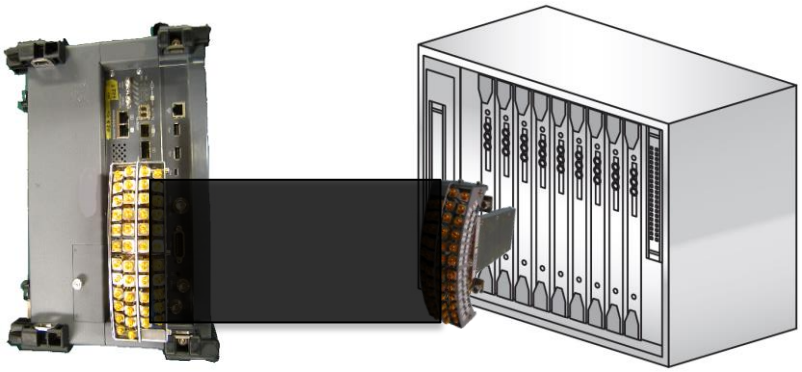
PCS Lane Testing with CAUI/XLAUI Interface

Back to Index page

- 10-lane extender MZ1223C
  - Attachment for MU110011A CFP connector
  - Captures CFP electrical input/output signals using MT1100A's optional accessory cables
  - No software version dependency

- Application
  - Evaluating devices such as optical transceivers, framer ICs, network equipment CAUI/XLAUI electrical interface



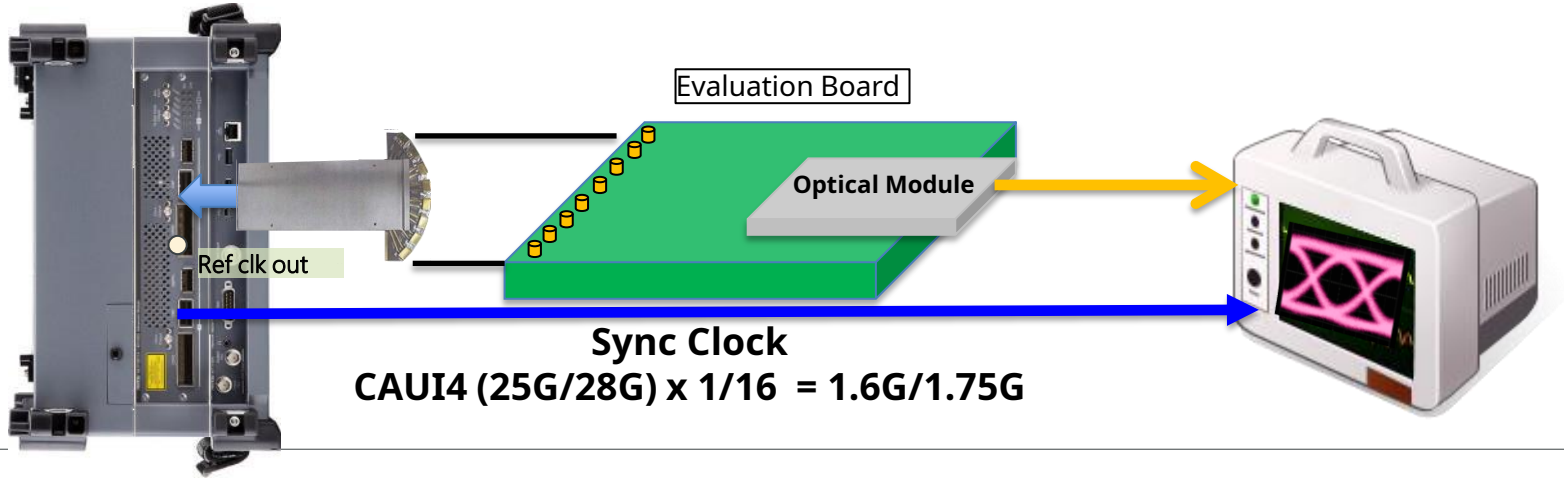


Test PCS Lanes using CAUI4 Interface

Back to Index page

- 4-Lane Extender for CFP2 J1666A
  - Mounted on MU110013A CFP2 connector
  - Uses MT1100A application part to extend CFP2 CAUI4 electrical I/O signals externally

- Application
  - For evaluating optical transceivers, Frame ICs, transmission equipment using CAUI4 interface



Network Master Flex MT1100A

Back to Index page

- VIP: Video Inspection Probe

Back to Index page

VIP: Video Inspection Probe

- VIP Video Inspection Probe
  - Judge quality of optical fiber and module endface
  - Find trouble in optical fiber and module endface Reduce degraded signal transmission and effect on measurement results
  - Prevent connected optical fiber and module endface damage
- Dirty connector endface…
  - Dirty connector endface causes more reflection
  - Cleaning connector endfaces maintains good connection
- Damaged connector endface…
  - Damaged connector endface has greater reflection and larger ORL (Optical Return Loss)
- MT1100A supports G0382A/G0306B VIP option
  - From the Table View, you can identify “defects” or “scratches”
  - The automatic pass/fail determination is made in accordance with the IEC61300-3-35 standard on the end of the fiber.

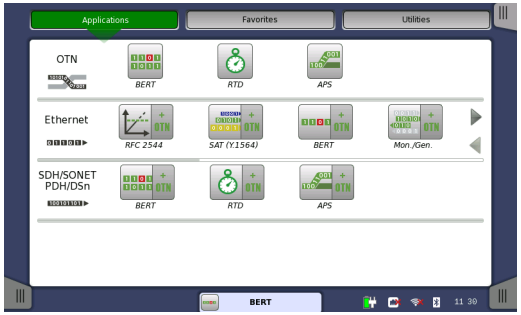
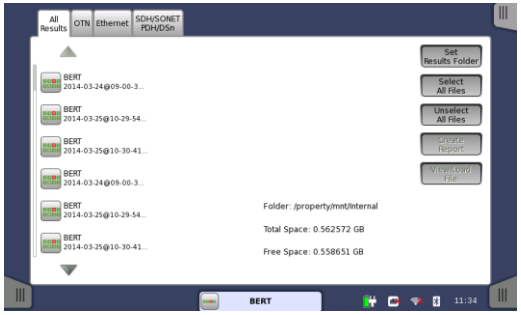
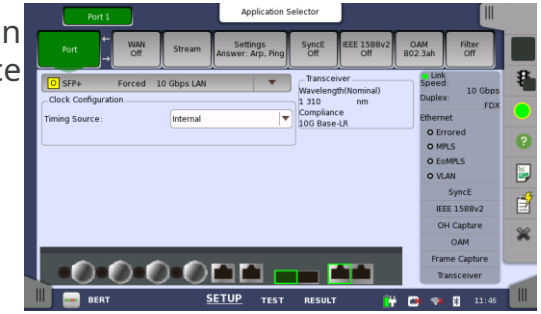
Application Selector



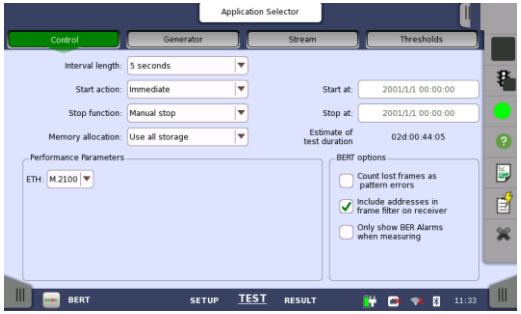
Results Files



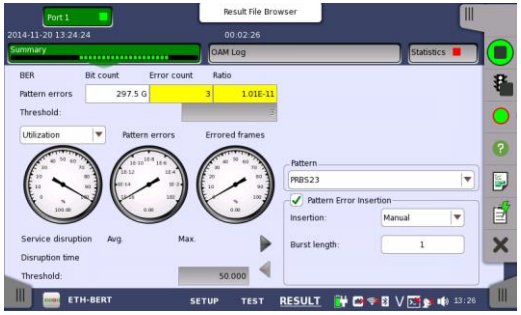
Application work space



Port Setup



Test Setup

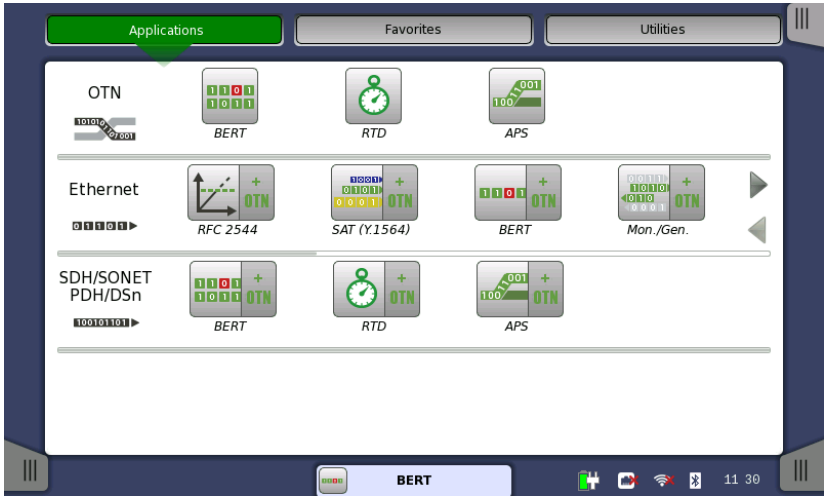


Test Results

MT1100A GUI

Back to Index page

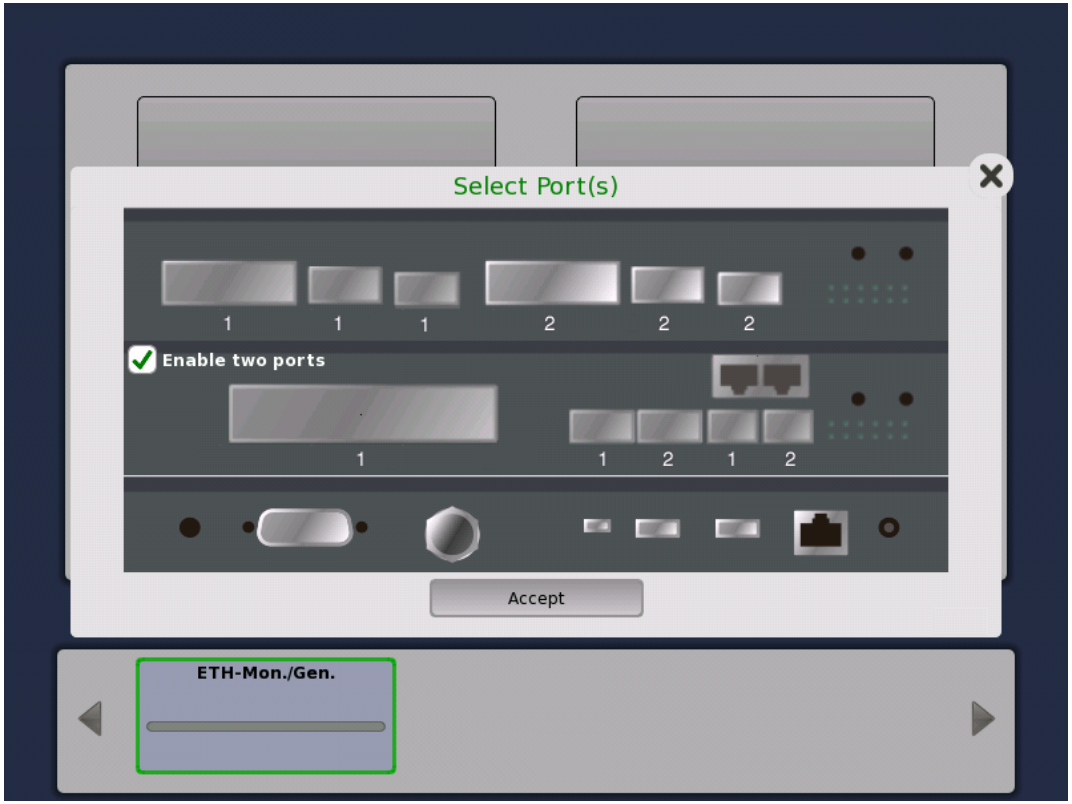
- Application selector
  - Intuitive launch of new test
  - ”Double” keys for starting tests of client signals in OTN
    - Right side of key starts test of client signals in OTN
    - Left side of key starts test of client signals directly



MT1100A GUI

Back to Index page

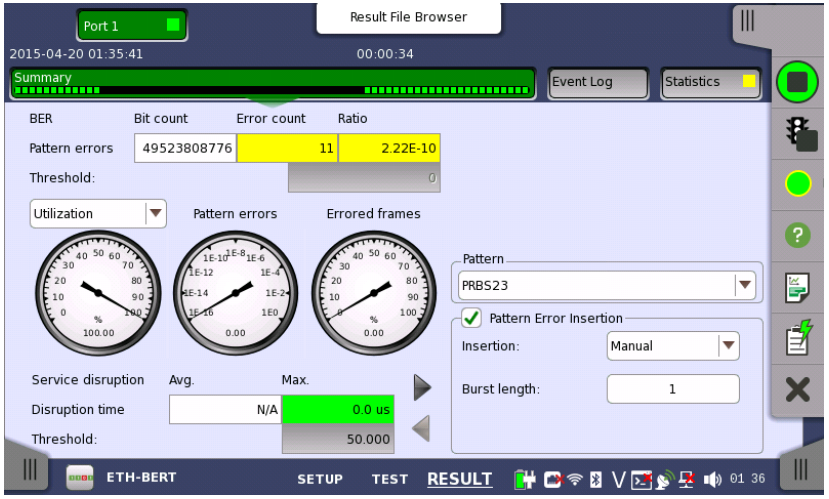
- Select Port display
  - Displayed after selecting application
    - Select one port – or two if available – and press Accept

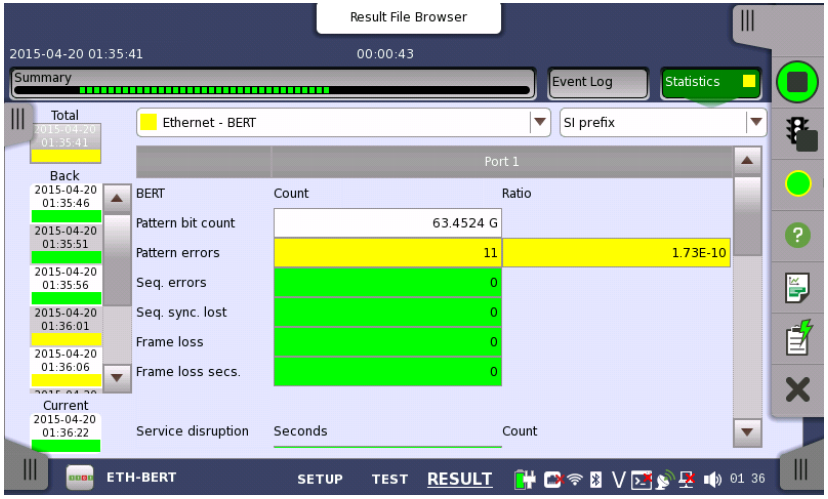


MT1100A GUI

Back to Index page

- Result pages:
  - Summary page
  - Event log
  - Statistics page(s)
    - Color-coded GO/NO GO indications

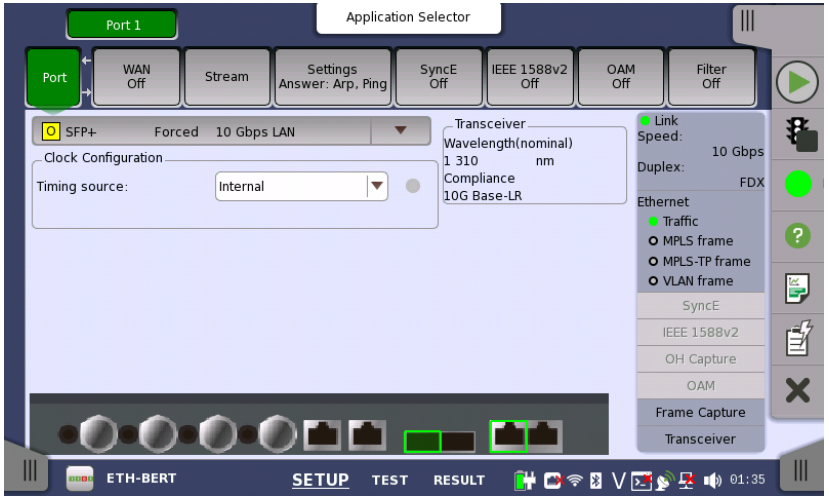


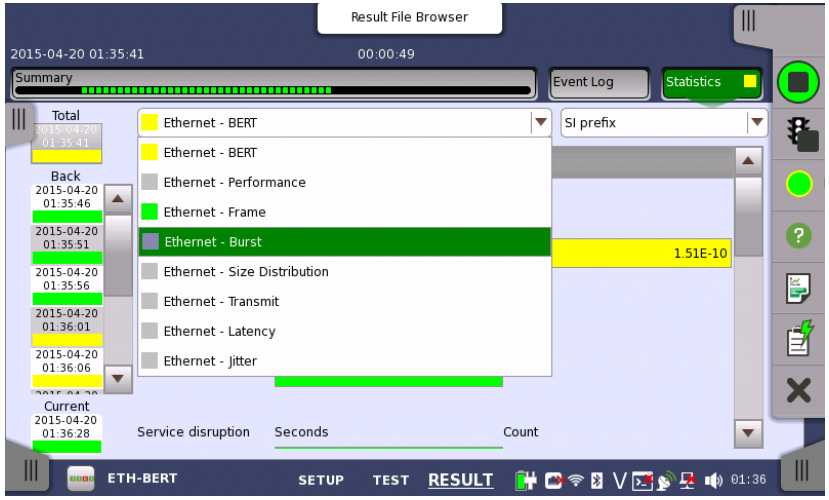


MT1100A GUI

Back to Index page

- Several pages in each main group
  - Selected with tabs
  - Selected from drop-down menu

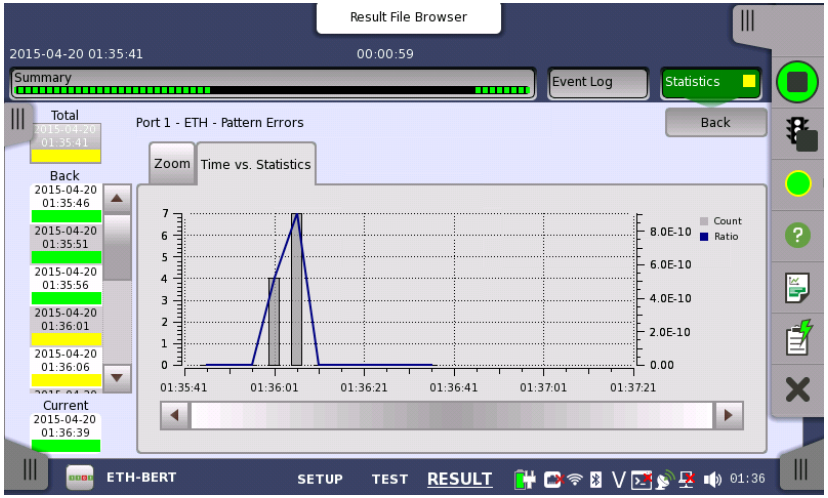


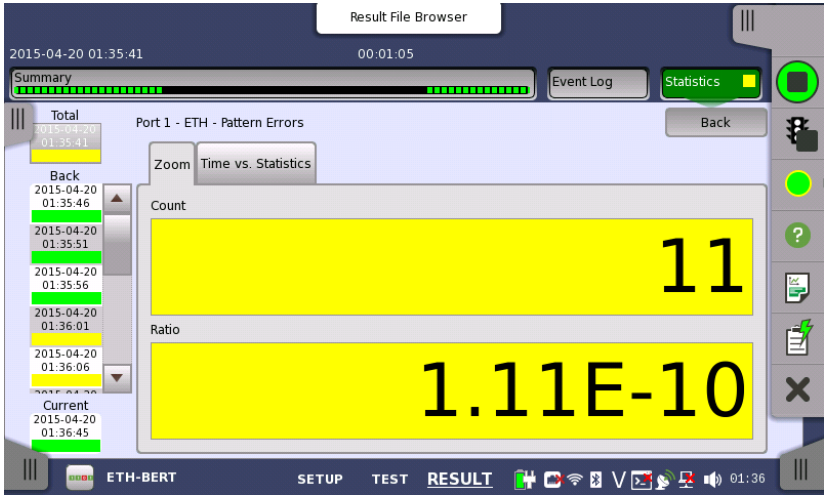


MT1100A Histograms for General Statistics

Back to Index page

- User sees distribution over time for selected parameter easily
  - Click parameter and select histogram
  - Click Zoom: Large numeric makes distance reading easy

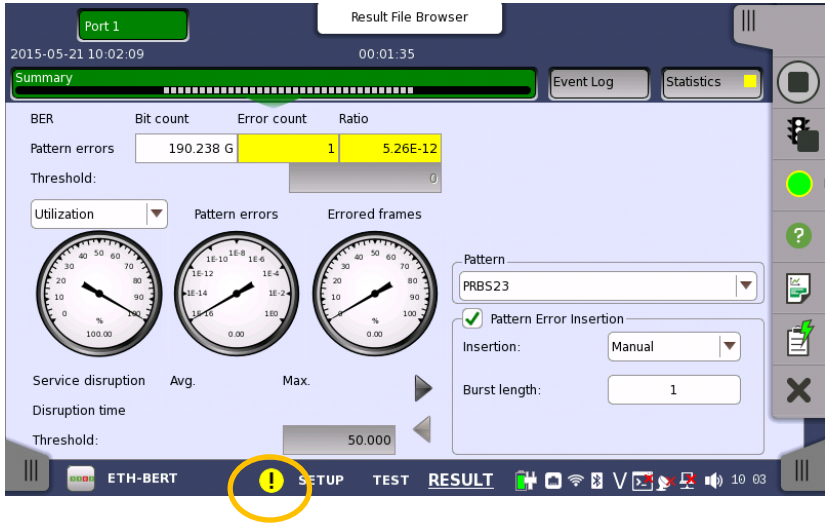




Test Applications Summary

Back to Index page

- Summarizes measurement results for all current Test Applications (applications using port resources) **belonging to one user –** using the Remote GUI software up to four users can use the MT1100A
- Test Application Summary and Overall Test Status only updates during testing:
  - Green: No trouble
  - Yellow: Errors (and no alarms) are pending or occurred in the past.
  - Red: Threshold violation or Alarms are pending or occurred in the past.



Shows worst Status of all test applications.

All applications are OK

One or more applications have Yellow Test Status (and no Red)

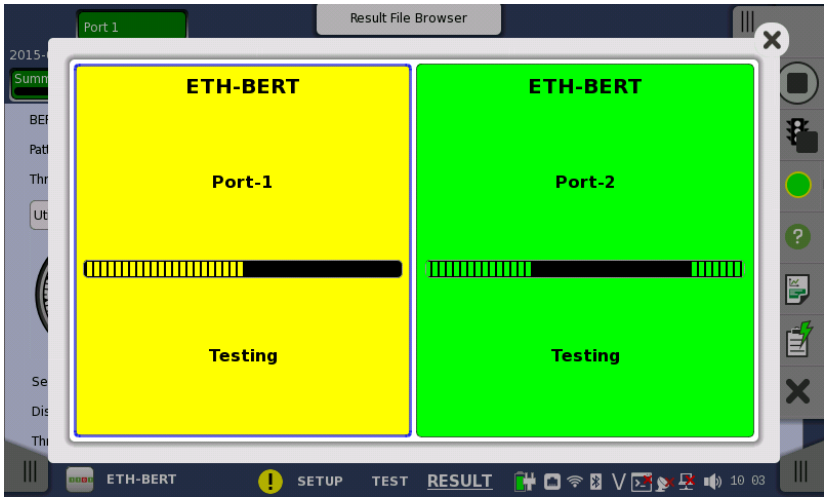
One or more applications have Red Test Status

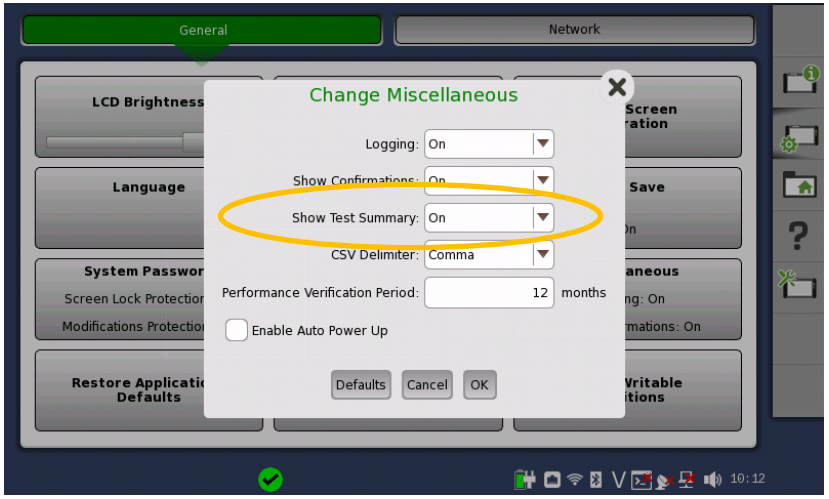
- Clicking the Test Applications Summary icon opens the Overall Test Status screen

Overall Test Status

Back to Index page

- For viewing test status for all current Test Applications from a distance
- Test Application Summary and Overall Test Status has no current/history distinction - basically they show history.
- To ”clear” Test Status: Restart the test.
- User configurable to show the Test Application Summary indicator – and to get access to the Overall Test Status screen





- Overall Test Status only updates during testing:
  - Green: No trouble
  - Yellow: Errors (and no alarms) are pending or occurred in the past.
  - Red: Threshold violation or Alarms are pending or occurred in the past.

Event Log

Back to Index page

- Event Log gives users powerful means to analyze problems of long -term testing
- Records what/when problem happened and how long/often been happening

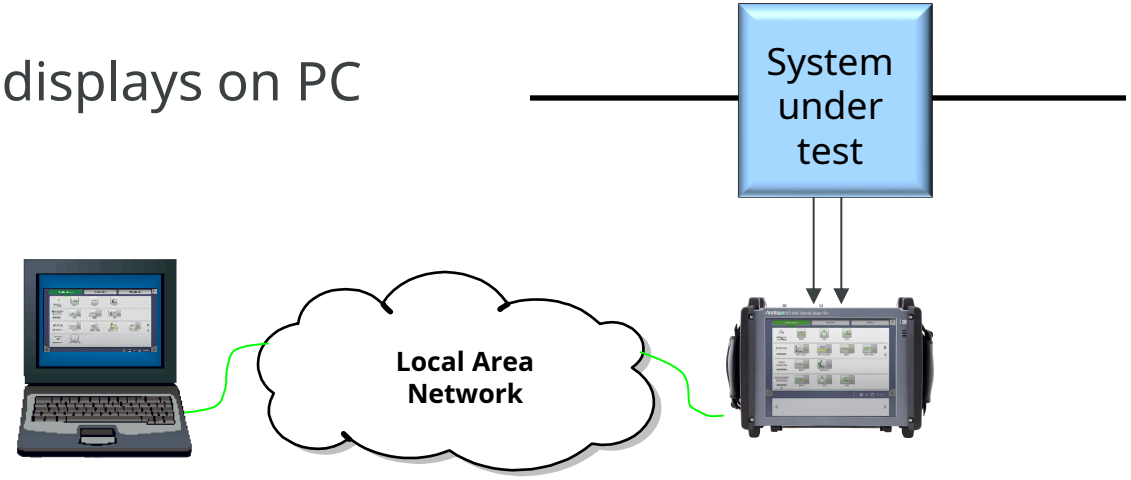
MT1100A Remote Operation – Applications

Back to Index page

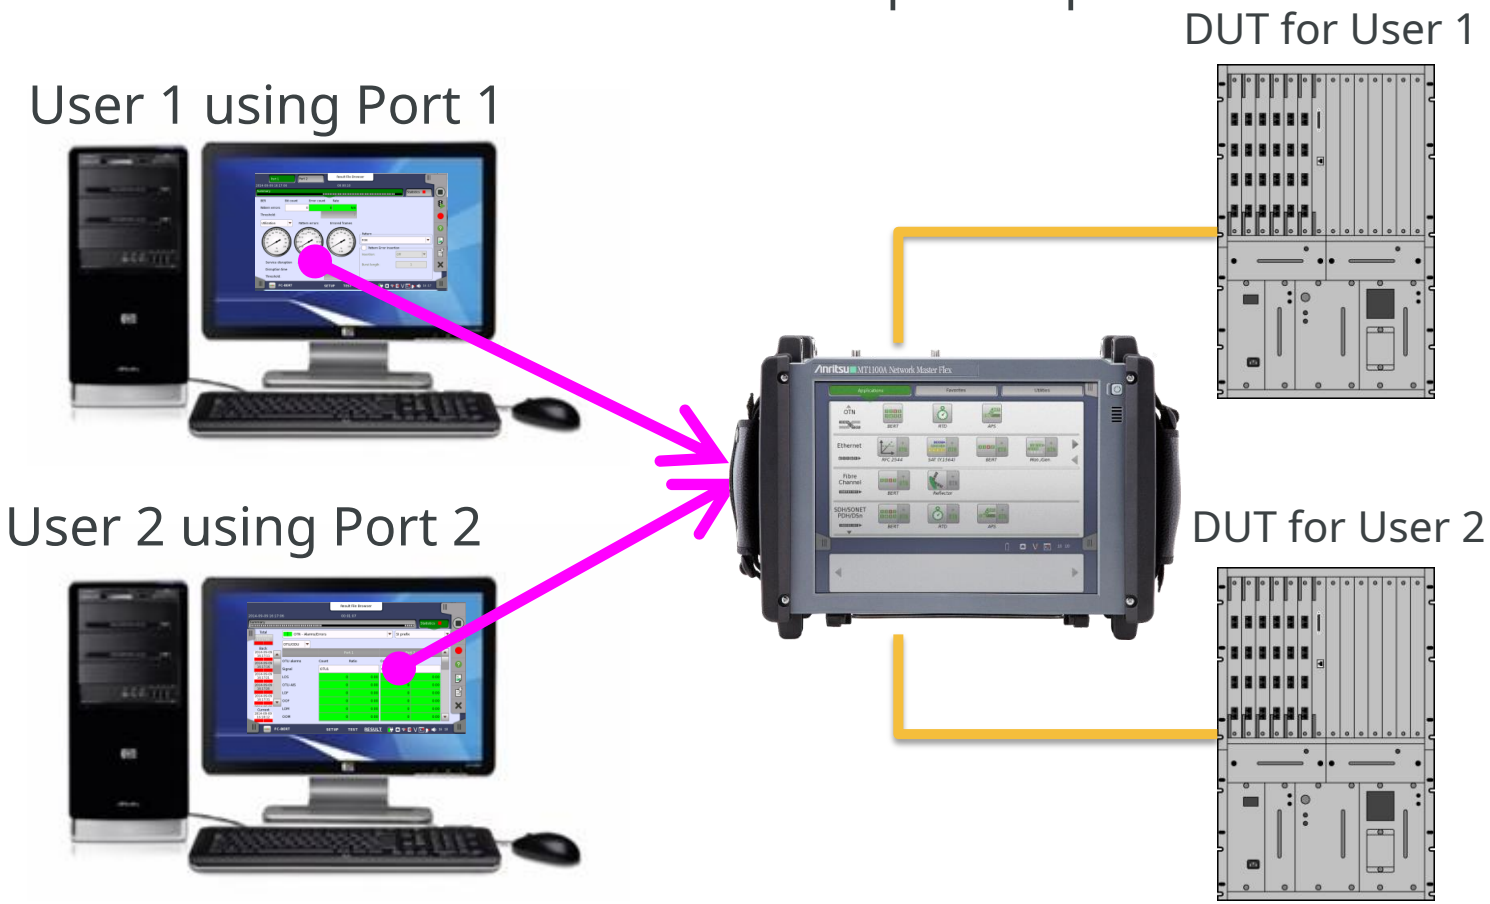
- Remote access
- Troubleshooting spurious errors
- Long-term surveillance and stability tests
- Multi-site surveillance
- Multi-user access
- Display screens via projector
- Documentation and training
- Operate MT1100A from PC with VNC client or new Remote GUI app
- View MT1100A displays on PC



What Can User Do with Remote GUI?

Back to Index page

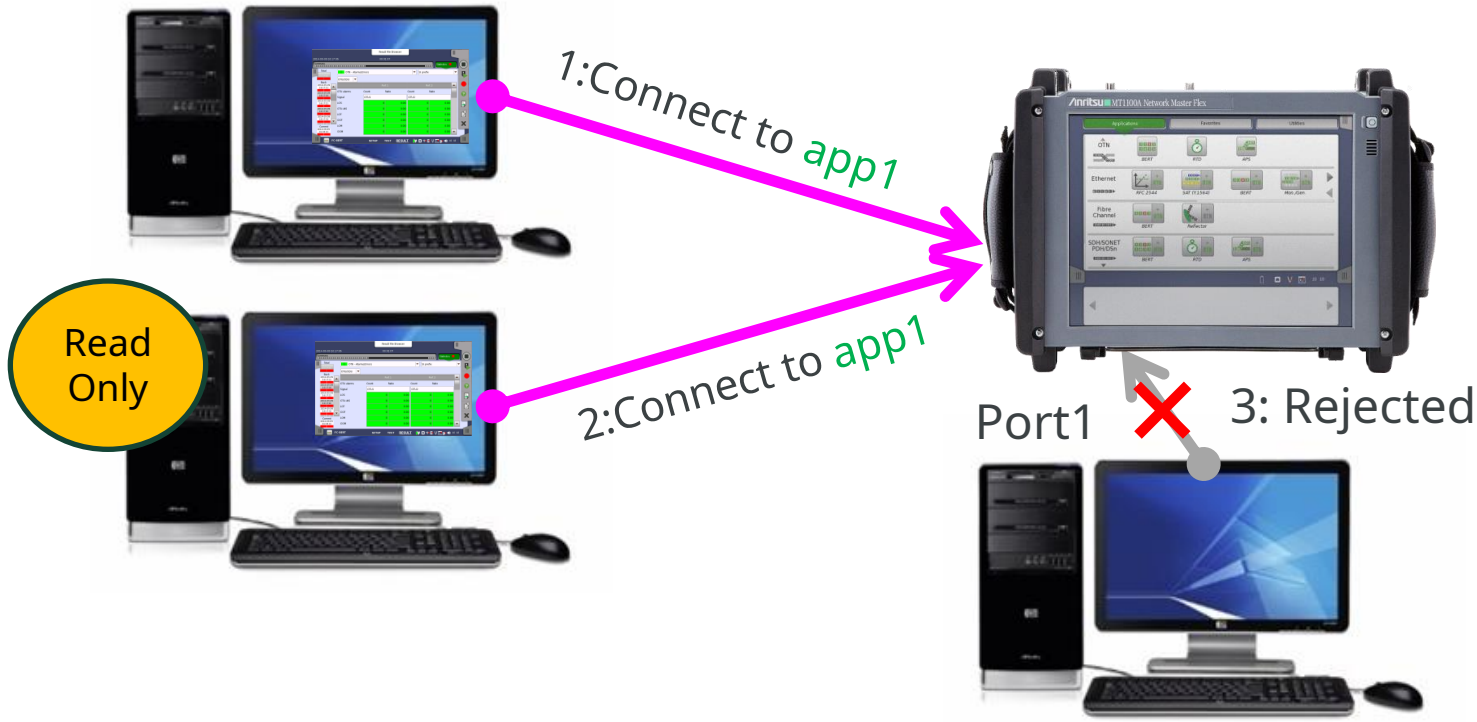
- Remote GUI application runs on Windows 7/8/8.1
- Port-oriented connection not unit-oriented
- Multiple users share same unit and use separate ports



What Can User Do with Remote GUI?

Back to Index page

- Connect one application to up to two GUIs



- Only one GUI can change settings and start test (Read/Write)
- Next user just observes (Read only)
- Any user can take right to change settings with exchangeable rights

What Can User Do with Remote GUI?

Back to Index page

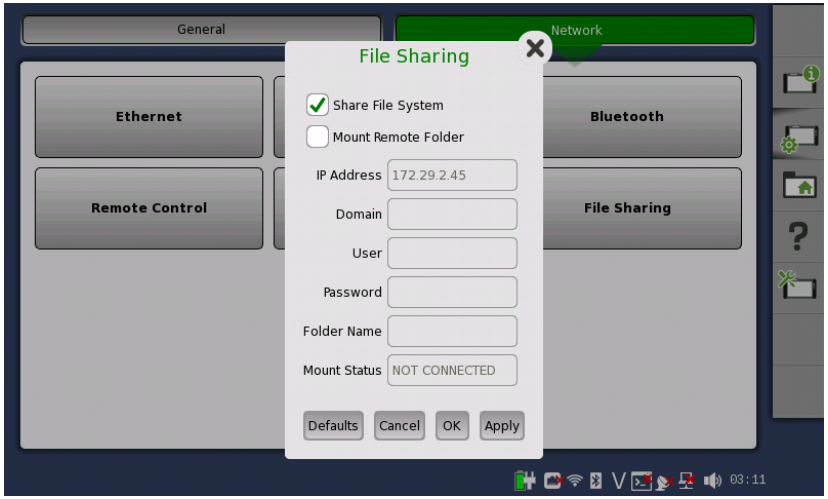
- Remote GUI can run as ‘Standalone’ viewer
- Users can:
  - Generate report(s)
  - Analyze results offline
  - Create setup file(s) for deployment

- Remote GUI supports
  - Firmware update via LAN
  - Remote unit reset

What Can User Do with Remote GUI?

Back to Index page

- Share file system—user can access file system from Windows Explorer
- Access PC file system—user can save/load file to/from Windows memory



- Remote GUI supports:
  - Firmware update via LAN.
  - Remote unit reset

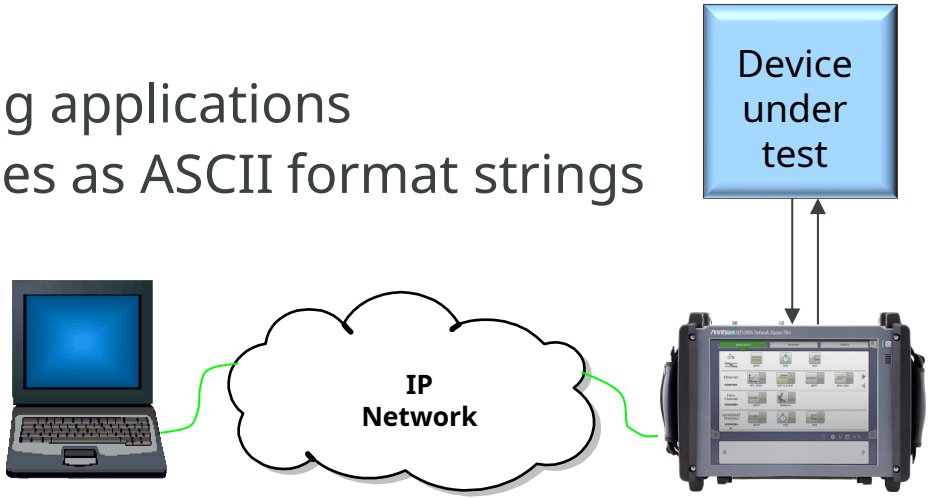
- Remote Control – Scripting

Remote Control Scripting Option

Back to Index page

- Automated testing for developing applications
- Remote control commands/replies as ASCII format strings
  - SCPI 1999.0 compliant with IEEE 488.2 mandatory common commands
- Fast command response
  - Execute up to 8 commands per second
    - Reduces test time at mass production
- Communication between controller (PC) and MT1100A:
  - Via MT1100A Ethernet Service Interface
    - TCP/IP connection
      - Test facility can be isolated LAN
  - Via WLAN
  - Via GPIB
- Includes documentation and scripting example
- LabVIEW driver sample



J1667A GPIB-USB Converter available for automated environments based on GPIB.
