Quick Fact Sheet
Field Master Pro™ MS2090A
9 kHz to 9/14/20/26.5/32/43.5/54 GHz

High-Performance Real-Time Spectrum Analyzer

Anritsu's Field Master Pro MS2090A real-time spectrum analyzer delivers performance never previously available in a compact, handheld instrument. With continuous frequency coverage from 9 kHz to 54 GHz, the Field Master Pro MS2090A is specifically designed to meet the challenges of 5G test while maintaining support for a full range of other wireless technologies in use today, including: wireless backhaul, aerospace/defense, satellite systems, and radar.

The Field Master Pro MS2090A delivers the highest levels of RF performance available in a handheld, touchscreen spectrum analyzer, with a displayed average noise level (DANL) of -164 dBm and Third Order Intercept (TOI) of +20 dBm (typical). This makes measurements such as spectrum clearing, radio alignment, harmonic, and distortion even more accurate than previously possible. For modulation measurements on digital systems, 100 MHz modulation bandwidth coupled with best-in-class phase noise performance maximizes measurement precision, while ±0.5 dB typical amplitude accuracy provides confidence when testing transmitter power and spurious.

Ruggedized for field use, all versions provide a comprehensive range of features to speed and simplify measurement as well as enhance usability. The RTSA options offer spans of 22, 55, 110 MHz to provide capability for cellular interference monitoring to full ISM band signal analysis. In addition to being a full span swept-tuned spectrum analyzer, all versions include a spectrogram display that helps monitor the RF spectrum for intermittent or interfering signals. Integrated channel power and occupied bandwidth measurements simplify the measuring and characterizing of common radio transmission.

Field Master Pro MS2090A Highlights

- RTSA bandwidth: 20 MHz (standard) up to 110 MHz (optional)
- RTSA POI: 22 MHz = 7 µs, 55 MHz = 4.45 µs, 110 MHz = 2.06 µs
- 9 kHz to 9/14/20/26.5/32/43.5/54 GHz
- DANL: -164 dBm (with preamp)
- TOI: +20 dBm (typical)
- Analysis bandwidth: up to 100 MHz
- Amp range: DANL to +30 dBm
- Phase noise at 1 GHz: -110 dBc/Hz @ 100 kHz offset (typical)
- Demodulation: 5GNR, modulation quality with SSB signal analysis and auto SSB detect
- Resolution bandwidth (RBW): 1 Hz to 10 MHz (up to 40 MHz in RTSA)
- Amplitude accuracy at < 14 GHz: ± 1.3 dB (± 0.5 dB, typical)
- Zero span with 60 ns minimum sweep time
