RF/Microwave Signal Generators

MG3690C
0.1 Hz to 70 GHz/500 GHz
MG3692C, MG3694C, MG3695C, MG3697C,

RoHS Compliant
Introduction
The MG3690C is the "ideal microwave signal generator," offering unsurpassed frequency coverage, the lowest phase noise, leveled output power, spectral purity, switching speed, modulation performance, size, upgradeability, reliability, and service. Our signal generators are configurable for a broad range of applications from R&D to manufacturing and depot repair. Anritsu provides you a total solution including proven reliability and standard 3 year warranty plus pre-sale and post-sale support that is the best in the industry.

All specifications and characteristics apply to MG3690C signal generators Revision 2 and above under the following conditions, unless otherwise stated. The specifications in the following pages describe the warranted performance of the instrument for 25 ± 10 °C. "Typical" specifications describe expected, but not warranted performance. They do not guarantee the performance of any individual product.
# Definitions

All specifications and characteristics apply under the following conditions, unless otherwise stated:

<table>
<thead>
<tr>
<th>Condition</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Warm-Up Time</td>
<td>After 30 minutes of warm-up time, where the instrument is left in the on state.</td>
</tr>
<tr>
<td>Temperature Range</td>
<td>Over the 23 °C ±5 °C temperature range.</td>
</tr>
<tr>
<td>Typical Performance</td>
<td>Typical specifications in parenthesis () describe performance that will be met by a minimum of 80% of all products. They do not include guard bands and are not warranted. Typical specifications that are not in parenthesis are not tested and not warranted. They are generally representative of the nominal characteristic performance.</td>
</tr>
<tr>
<td>Uncertainty</td>
<td>A coverage factor of K=2 is applied to the measurement uncertainties.</td>
</tr>
<tr>
<td>Calibration Cycle</td>
<td>Recommended calibration cycle is 2 years from the date of shipment (standard warranty).</td>
</tr>
</tbody>
</table>

All specifications subject to change without notice. For the most current data sheet, please visit the Anritsu web site: [www.anritsu.com](http://www.anritsu.com)

</tbody>
</table>

Options 4 and 5: Frequency extension down to 8 MHz

Two options are available to extend the 2 GHz low end frequency limit of the base models down to 8 MHz. Option 4 uses a digital down-converter (DDC) with successive divide-by-two circuitry. It offers the best phase noise performance of the two choices, at the expense of some analog performance < 500 MHz. In that range, analog sweep mode is not available, and pulse modulation performance is specified as typical. In addition, frequency and phase modulation mod index is scaled by the division ratio of each band of the DDC. Option 5 maintains all analog performance by using a heterodyne mixing down-converter, but does not improve phase noise performance.

Option 22: If frequency coverage down to 0.1 Hz is desired, Option 22 can be added with either Option 4 or 5. Option 22 uses Direct Digital Synthesis (DDS) for CW and Step Sweep modes of operation. Modulation and analog sweep are not available in the DDS band. Frequency resolution < 10 MHz is 0.02 Hz. Output power across the complete instrument frequency range is degraded by 2 dB.

**CW Mode**

- Accuracy: Same as internal or external 10 MHz time base
- Internal Time Base Stability:
  - With aging: < 2 x 10^{-9}/day (< 5 x 10^{-10}/day with Option 16)
  - With temperature: < 2 x 10^{-9}/°C over 0 °C to 55 °C (< 2 x 10^{-10}/°C with Option 16)
- Resolution: 0.01 Hz
- Internal Time Base Calibration: The internal time base can be calibrated via the System Cal menu to match an external reference (10 MHz ± 50 Hz).
- External 10 MHz Reference Input: Accepts external 10 MHz ± 50 Hz (typical)
- 10 MHz Reference Output: 1 V_p-p into 50 Ω, AC coupled
- Phase Offset: Adjustable in 0.1 degree steps
- Electronic Frequency Control (EFC): -4 V to +4 V input range

**Phase-Locked Step Sweep Mode**

- Sweep Width: Independently selected, 0.01 Hz to full range
- Accuracy: Same as internal or external 10 MHz time base
- Resolution (Minimum Step Size): 0.01 Hz
- Linear/Log Sweep: User-selectable linear or log sweep
- Steps: User-selectable number of steps or the step size
- Number of Steps: Variable from 1 to 10,000
- Step Size: 0.01 Hz to the full frequency range of the instrument
- Dwell Time Per Step: Variable from 1 ms to 99 s
- Fixed Rate Sweep: Variable from 30 ms to 99 s

---

a. For frequency coverage beyond 70 GHz, utilize millimeter-wave multiplier 2000-1694 series (see page 2-19).
b. Operational to 70 GHz
c. All specifications apply ≥ 10 MHz
### Specifications

<table>
<thead>
<tr>
<th>Analog Sweep Mode (Option 6)</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Sweep Width</strong></td>
<td>Independently selected from 1 MHz to full frequency range. For units with Option 4 (Digital Down Converter), the start frequency during analog sweep is limited to $\geq$ 2.2 GHz for stop frequencies &gt; 20 GHz. For stop frequencies $\leq$ 20 GHz, the start frequency is limited to $\geq$ 500 MHz. A range error will be displayed if any of these analog sweep start/stop limits are exceeded. Analog sweep is not available $&lt; 10$ MHz with Option 22.</td>
</tr>
<tr>
<td><strong>Accuracy</strong></td>
<td>The lesser of $\pm$ 30 MHz or $\pm$ 2 MHz +0.25 % of sweep width for Sweep Speeds of $\leq$ 50 MHz/ms (typical)</td>
</tr>
<tr>
<td><strong>Sweep Time Range</strong></td>
<td>30 ms to 99 s</td>
</tr>
</tbody>
</table>

| Alternate Sweep Mode | Sweeps alternately in step sweep between any two sweep ranges. Each sweep range may be associated with a power level. |

| Manual Sweep Mode | Provides stepped, phase-locked adjustment of frequency between sweep limits. User-selectable number of steps or step size. |

| List Sweep Mode | Under GPIB or Ethernet control, or via the front panel, up to 4 tables with 2000 non-sequential frequency/power sets can be stored and then addressed as a phase-locked step sweep. One table of 2000 points is stored in non-volatile memory. All other tables are stored in volatile memory. |

| Programmable Frequency Agility | Under GPIB or Ethernet control, up to 3202 non-sequential frequency/power sets can be stored and then addressed as a phase-locked step sweep. Data is stored in volatile memory. |

<table>
<thead>
<tr>

</table>
Markers

**Description**
Up to 20 independent, settable markers (F0 – F9 and M0 – M9)

**Video Markers**
+5 V or -5 V marker output, selectable from system menus
AUX I/O connector, rear panel

**Intensity Markers**
Produces an intensity dot on analog display traces, obtained by a momentary dwell in RF sweep, in analog sweeps of < 1 second.

**Marker Accuracy**
Same as sweep frequency accuracy

**Marker Resolution:**
- Analog Sweep: 1 MHz or Sweep Width/4096, which ever is greater
- Step Sweep: 0.01 Hz

Remote Operation

**Description**
All instrument functions, settings, and operating modes (except for power on/standby) are controllable using commands sent from an external computer via Ethernet (VXI-11 over TCP/IP) or GPIB (IEEE-488 interface bus).

Note: For users who wish to use a USB control interface, the following adapter available from National Instruments is recommended:
USB: NI GPIB-USB-MS

**Ethernet Port**
10/100 Base-T

**Ethernet Address**
DHCP with Auto-IP 169.254.90.55 (default) or static 192.168.0.254

**GPIB Address**
Select from a system menu

**GPIB Commands**
Native, SCPI
IEEE-488 Interface Function Subset
Source Handshake: SH1
Acceptor Handshake: AH1
Talker: T6
Listener: L4
Service Request: SR1
Remote/Local: RL1
Parallel Poll: PP1
Device Clear: DC1
Device Trigger: DT1
Controller Capability: C0, C1, C2, C3, C28
Tri-State Driver: E2

**GPIB Status Annunciators**
When the instrument is operating in Remote, the GPIB status annunciators (listed below) will appear in a window on the front panel LCD.

**Remote**
Operating on the GPIB or via Ethernet, all instrument front panel keys are ignored, except for the SYSTEM key and the RETURN TO LOCAL soft key.

**LLO (Local Lockout)**
Disables the RETURN TO LOCAL soft key. Instrument can be placed in local mode only via Ethernet or GPIB, or by cycling line power.

**Emulations**
The instrument responds to the published GPIB commands and responses of the Anritsu Models 6600, 6700, and 6XX00-series signal sources. When emulating another signal source, the instrument will be limited to the capabilities, mnemonics, and parameter resolutions of the emulated instrument.

Environmental (MIL-PRF-28800F, class 3)

**Storage Temperature Range**
-40 °C to +75 °C

**Operating Temperature Range**
0 °C to +50 °C

**Relative Humidity**
5 % to 95 % at 40 °C (non-condensing)

**Altitude**
4,600 m, 43.9 cm-Hg

**Vibration**
Random, 5 Hz to 500 Hz, 0.015 to 0.0039 g²/Hz PSD; Sinusoidal, 5 Hz to 55 Hz, 0.33 mm displacement

**EMC**
IEC 61326-1:2013

**Safety**
IEC 61010-1:2010

Regulatory Compliance

**European Union**
Low Voltage Directive 2014/35/EU
Safety EN 61010-1:2010
RoHS Directive 2011/65/EU applies to instruments with CE marking and noted as Rev. 2 or above on the rear panel.

**Australia and New Zealand**
RCM AS/NZS 4417:2012

**South Korea**
KCC-REM-A21-0004
## Frequency Switching Time

### Definitions

- **Free Running Mode**
  - Step or List Sweep
  - \( t_{sw} = \) Switching Time, Unlocked

- **Lock Status Indicator**
  - Rear Panel AUX I/O connector (pin 11)
  - The lock status indicator goes high when the output is within 1 kHz of the final frequency.
  - \( t_{lk} = \) Locked Time = 1 ms + \( t_{dW} \)
  - \( t_{dW} = \) Dwell Time, after locking. Selectable, 1 ms minimum
  - \( t_{lk} (\text{min}) = 2 \text{ ms} \)

### Single Frequency Trigger Mode

- **(List, non-sequential, and CFx modes)**
  - \( t_{r} = \) Trigger Response Time = 2 ms
  - (Applies to GPIB, Ethernet and External TTL triggers)

![Switching Time Diagram](image)

### Switching Time (\( t_{sw} \))

<table>

</tr>
</tbody>
</table>

### AM Noise Floor

Typically < −145 dBm/Hz at 0 dBm output and offsets > 5 MHz from carrier
Single-Sideband Phase Noise

Phase noise is specified and guaranteed only with internal reference. In External Reference mode, the phase noise of the external supplied reference, and the selected external reference bandwidth, will dictate the instrument phase noise performance. Phase noise is not degraded when adding high power.

---

a. ≤ 2.2 GHz with Option 4
b. > 2.2 GHz with Option 4
c. Typical 60 GHz to 67 GHz
d. Typical
**Specifications**

### Minimum Settable Output Power
- Without an Attenuator: -20 dBm
- With an Attenuator: -120 dBm

### Minimum Leveled Output Power
- Without an Attenuator: -15 dBm (-20 dBm, typical)
- With an Attenuator: -115 dBm (MG3692C and MG3694C)
- -105 dBm (MG3695C and MG3697C)

### Unleveled Output Power Range
- Without an Attenuator: > 40 dB below max power
- With an Attenuator: > 130 dB below max power

### Power Level Switching Time
- Without Change in Step Attenuator: < 3 ms typical
- With Change in Step Attenuator: < 20 ms typical
- With Change in Electronic Step Attenuator: < 3 ms typical
  - Power level changes across ~70 dB step will result in 20 ms delay.

### Step Attenuator (Option 2)
- Adds a 10 dB/step attenuator
- 110 dB range on models ≤ 40 GHz
- 90 dB range on models > 40 GHz

### Accuracy and Flatness
- Flatness is included within the accuracy specification.

### CW Power Sweep

<table>
<thead>
<tr>
<th>Specification</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Range</strong></td>
<td>Sweeps between any two power levels at a single CW frequency.</td>
</tr>
<tr>
<td><strong>Resolution</strong></td>
<td>0.01 dB/step (Log) or 0.001 mV (Linear)</td>
</tr>
<tr>
<td><strong>Accuracy</strong></td>
<td>Same as CW power accuracy</td>
</tr>
<tr>
<td><strong>Log/Linear Sweep</strong></td>
<td>Power sweep selectable as either log or linear. Log sweep is in dB; linear sweep is in mV.</td>
</tr>
<tr>
<td><strong>Step Size</strong></td>
<td>User-controlled, 0.01 dB (Log) or 0.001 mV (Linear) to the full power range of the instrument.</td>
</tr>
<tr>
<td><strong>Step Dwell Time</strong></td>
<td>Variable from 1 ms to 99 seconds. If the sweep crosses a step attenuator setting, there will be a sweep dwell of approximately 20 ms to allow setting of the step attenuator.</td>
</tr>
</tbody>
</table>

### Sweep Frequency/Step Power

A power level step occurs after each frequency sweep. Power level remains constant for the length of time required to complete each sweep.
Modulation

**Frequency/Phase Modulation (Option 12)**

Frequency/Phase Modulation is not available <10 MHz with Option 22. Option 12 adds frequency and phase modulation, driven externally via a rear panel BNC connector, 50 W. For internal modulation, add Internal LF Generator and Pulse Generator Option 27.

For the most accurate FM and \( \phi_m \) measurements, Bessel Null methods are used. When verifying FM and \( \phi_m \), the use of the "carrier null" technique is recommended. Measured residual FM effects must be subtracted from modulation meter measurements.

### Frequency Generator Multiplication/Division Ratios

### Amplitude Modulation (Option 14)

- **Description**: Option 14 adds amplitude modulation, driven externally via a rear panel BNC connector 50Ω. For internal modulation, add Internal LF and Pulse Generators Option 27. All amplitude modulation specifications apply at 50% depth, 1 kHz rate, with RF level set 6 dB below maximum specified leveled output power, unless otherwise noted. Amplitude Modulation is not available < 10 MHz with Option 22.

- **AM Depth**: Linear: 0% to 90% (nominal)  
  Log: 0 dB to 20 dB (nominal)

- **Accuracy**: Reading ± 5%

- **AM Bandwidth (3 dB)**:  
  DC to 50 kHz minimum  
  DC to 100 kHz typical  
  Typical below 2.2 GHz, when ordered with Options 4 and 15

- **Flatness (DC to 10 kHz rates)**: ± 0.3 dB  
  < 0.2 rad typical

- **Distortion**: < 5% typical

- **Incidental Phase Modulation (30% depth, 10 kHz rate)**: < 0.2 rad typical

- **External AM Input**: Log AM or Linear AM input  
  Rear-panel BNC (50Ω input impedance)  
  For internal modulation, add LF Generator Option 27.

- **Sensitivity**: Log AM: Continuously variable from 0 dB per volt to 25 dB per volt.  
  Linear AM: Continuously variable from 0% per volt to 100% per volt.

- **Maximum Input**: ± 1 Vpk
Specifications MG3690C

Pulse Modulation (Option 26)

Description
Option 26 adds pulse modulation, driven externally via a rear panel BNC connector, TTL. For internal modulation, add Internal LF and Pulse Generators Option 27. Pulse modulation specifications apply at maximum rated power, unless otherwise noted. Pulse modulation is not available < 10 MHz with Option 22.

On/Off Ratio
> 80 dB or
> 70 dB with high power Option 15;
> 70 dB with Option 4 or 5 and without Option 2 at 500 MHz

Minimum Leveled Pulse Width
100 ns, ≥ 1 GHz
1 μs, < 1 GHz

Minimum Unleveled Pulse Width
< 10 ns

Level Accuracy Relative to CW (100 Hz to 1 MHz PRF)
± 0.5 dB, ≥ 1 μs pulse width
± 1.0 dB, < 1 μs pulse width

Pulse Delay (typical)
50 ns in External Mode

PRF Range
DC to 10 MHz, unleveled
100 Hz to 5 MHz, leveled

External Input
Rear-panel BNC

Drive Level
TTL compatible input

Input Logic
Positive-/negative-true, selectable from modulation menu

</table>

a. Typical values.
b. Rise time and Pulse Width Compression, > 20 GHz, degrades by 2 ns, with High Power Option 15.
c. For 50 GHz and 67 GHz units, overshoot > 40 GHz is 20 % typical at rated power.

Internal LF and Pulse Generators (Option 27)

Description
An internal pulse generator and two internal waveform generators are added, one providing a frequency or phase modulating signal and the other an amplitude modulating signal. This Internal LF and Pulse Generators option can only be ordered in combination with either FM/ΦM, AM, or Pulse options, 12, 14, and 26 respectively.

Waveforms
Sinusoid, square-wave, triangle, positive ramp, negative ramp, Gaussian noise, uniform noise (Check Option 10 for User-defined.)

Rate
0.1 Hz to 10 MHz sinusoidal
0.1 Hz to 1 MHz square-wave, triangle, ramps

Resolution
0.1 Hz

Accuracy
Same as instrument timebase ± 0.014 Hz

Waveform Outputs
Two BNC connectors on the rear panel, FM/ΦM OUT and AM OUT

Pulse Modes
Singlet, doublet, triplet, quadruplet

Pulse Triggers
Free-run, triggered, gated, delayed, triggered with delay, swept-delay

Pulse Inputs/Outputs
Video pulse and sync out, rear-panel BNC connectors

a. Period must be longer than the sum of delay and width by 5 clock cycles minimum.
Ultra-Stable Phase Tracking (Option 36)

Description: Option 36 enables up to three MG3690C units fitted with Option 3 or 3X to phase track with a very high degree of stability. Option 36 provides additional rear panel connectors to link internal reference signals together.

100 MHz Reference Output: Provides the reference signal to drive up to two other MG3690C generators. All MG3690C generators must have Option 36 and either Option 3 or 3X. This signal is only intended for use with other Option 36 instruments.

100 MHz Reference Input: Accepts the 100 MHz reference signal from another MG3690C fitted with Option 36. This input is only intended for use with other Option 36 instruments.

Phase Drift: < ±1° over 5 seconds (typical)  
< ±1.5° over 100 seconds (typical), after 24 hours warm-up time

User-Defined Modulation Waveform Software (Option 10)

An external software package provides the ability to download user-defined waveforms into the internal LF Generator's memory (requires Option 27, 28A, or 28B). The MG3690C provides as standard with the LF Generator sinusoidal, square-wave, triangle, positive ramp, Gaussian noise, and uniform noise waveforms.

Two look-up tables of 65,536 points can be used to generate two pseudo-random waveforms, one for amplitude modulation and the other for frequency or phase modulation. The download files are simple space-delimited text files containing integer numbers between 0 and 4095, where 0 corresponds to the minimum modulation level and 4095 the maximum.

In addition to the capability of downloading custom waveforms, the software offers a virtual instrument modulation panel. Custom modulation setups with user waveforms can be stored for future use. For IFF signal simulation, the internal generators can be synchronized. They can also be disconnected from the internal modulators, making the low frequency waveforms available at the rear panel for external purposes.

Figure 2-1. Complex Modulation Interface
### Millimeter-wave Frequency Coverage

#### Millimeter-Wave Multiplier 2000-1694 Series

2000-1694 series external waveguide output multipliers are available for banded frequency coverage up to 500 GHz. These external multipliers require at a minimum, an MG3692C with 20 GHz coverage. The output power required to drive the modules is +10 dBm. They can be powered from an external power supply (+12 VDC, 1.5 A typical) using the supplied double banana power cord, or from the 40-187-R DC Power Supply and 2000-1710-R Millimeter-wave power supply adapter. Both included with the modules.

2000-1694 series multipliers have a saturated, unlevelled, output power, yet their inherent flatness is exceptional. Modulating the input drive will indeed modulate the output, except for the case of Amplitude Modulation. Since the output is saturated, Amplitude Modulation is not recommended with these millimeter-wave modules. Frequency and Phase Modulation is possible, but the achieved deviation will be multiplied based on the multiplication factor of the module. Pulse modulation is also possible, with even sharper rise and fall times than the input. All modulation performances are not specified.

For ease of operation, the MG3690C allows the user to enter a frequency scaling factor, the module's multiplication factor, which will be used only for purposes of displaying the proper frequency at the output of the millimeter-wave module, on the MG3690C front panel display.

- +20 °C to +30 °C

---

a. These millimeter-wave modules are produced by OML Inc. (Oleson Microwave Labs), located in Morgan Hill, CA, with mutual collaborative experiences over many years. For detailed and up-to-date specifications, please call OML, Inc. or visit their website at http://www.omlinc.com.

b. Multipliers require power from an external power supply (+12 VDC, 1.5 A typical) using the supplied double banana power cord, or from the 40-187-R DC Power Supply and 2000-1710-R Millimeter-wave Power Supply Adapter (both included with the modules).

c. Warranty period for the 2000-1694 Series is one year.
d. Waveguide output flanges are per MIL-DTL-3922/67D (UG387/U-M).
e. Output power is estimated.
f. Available as an option. To order, add “A” to multiplier module part number (for example, 2000-1694-15A-R). Not available with 2000-1694-02-R.
g. In-band mixing products typically ≤ -15 dBc in the lower 10 % of the waveguide band.
h. As relates to multiplied output frequencies.
### Inputs and Outputs

## MG3690C Specifications

### Ordering Information

**Models**

- MG3692C: 2 GHz to 20 GHz Signal Generator
- MG3694C: 2 GHz to 40 GHz Signal Generator
- MG3695C: 2 GHz to 50 GHz Signal Generator
- MG3697C: 2 GHz to 67 GHz Signal Generator (operational to 70 GHz)

**Standard Accessories (included)**

- 2300-469 Software for MG3690X
- Operation Manual
- Programming Manual
- SCPI Programming Manual
- IVI Drivers
- Technical Datasheet
- 2000-1732-R CAT-7 shielded, twisted-pair, Ethernet cable, 10 ft.
- Miscellaneous Power Cord with plug-type and rating determined by destination country.

**Options**

- MG3690C/1A: Rack Mount with slides. Rack mount kit containing a set of track slides, mounting ears, and front panel handles to let the instrument be mounted in a standard 19-inch equipment rack.
- MG3690C/1B: Rack Mount without slides. Modifies rack mounting hardware to install unit in a console that has mounting shelves. Includes mounting ears and front panel handles.
- MG3690C/2A, MG3690C/2B, MG3690C/2C: Mechanical Step Attenuator. Adds a 10 dB/step attenuator. Rated RF output power is reduced. This option comes in different versions, based on instrument configuration.
- MG3690C/3: Ultra Low Phase Noise. Adds new modules to significantly reduce SSB phase noise. Not available with Option 3X.
- MG3690C/3X: Premium Phase Noise. Improves Option 3 < 1 kHz offset. Not available with Option 3.
- MG3690C/4: 8 MHz to 2.2 GHz RF coverage. Ultra-Low Phase Noise version. Uses a digital down converter to significantly reduce SSB phase noise. All specifications apply ≥ 10 MHz.
- MG3690C/5: 8 MHz to 2 GHz RF Coverage. Uses an analog down converter. All specifications apply ≥ 10 MHz.
- MG3690C/6: Analog Sweep Capability. When used with Option 4, analog sweep capability is limited to ≥ 500 MHz.
- MG3690C/9V, MG3690C/9K: Rear Panel Output Moves the RF output connector to the rear panel. This option comes in different versions, based on instrument configuration.
- MG3690C/10: User-Defined Modulation Waveform Software. External software package provides the ability to download user-defined waveforms into the memory of the internal waveform generator, serially or via GPIB or Ethernet. External PC and an instrument with LF Generator, Option 27, are required.
- MG3690C/12: Frequency and Phase Modulation. External, via a rear panel BNC connector. For internal modulation capability, requires addition of an LF Generator, Option 27.
- MG3690C/14: Amplitude Modulation. External, via a rear panel BNC connector. For internal modulation capability, requires addition of an LF Generator, Option 27.
- MG3690C/15A, MG3690C/15B, MG3690C/15C, MG3690C/15D: High Power. Adds high-power RF components to the instrument to increase its output power level. This option comes in different versions, based on instrument configuration.
- MG3690C/16: High Stability Time Base. Adds an ovenized, 10 MHz crystal oscillator as a high-stability time base.
- MG3690C/17: Delete Front Panel. Deletes the front panel for use in remote control applications where a front panel display and keyboard control are not needed. Only available with Options 1A or 1B.
- MG3690C/22: 0.1 Hz to 10 MHz Audio coverage. Uses a DDS for coverage down to approximately DC. When adding Option 22, the output power is derated by 2 dB. Frequency resolution below 10 MHz is 0.02 Hz. No modulation is available in the 0.1 Hz to 10 MHz band. Not available without Option 4 or 5.
- MG3690C/26: Pulse Modulation. External, via a rear panel BNC connector. For internal modulation capability, requires addition of a Pulse Generator, Option 27. This option comes in different versions, based on instrument configuration.
- MG3690C/27: Internal LF and Pulse Generators. Provides modulation waveforms for internal AM (if Option 12 installed), FM (if Option 12 installed), and Pulse (if Option 26 installed) and Pulse (if Option 26A/B installed). Not available without Option 12, 14, or 26.
- MG3690C/28: Analog Modulation Suite. For ease of ordering and package pricing, this option bundles Options 12, 14, 26 and 27, offering internally- and externally-driven AM, FM, and Pulse Modulation. This option comes in different versions, based on instrument configuration.
- MG3690C/36: Ultra-Stable Phase Tracking. Provides the capability for ultra-stable phase tracking between instruments using the internal 100 MHz reference. Requires Options 12 or 3X.
- MG3690C/CE: CE Compliance with CE mark.

### Millimeter Wave Accessories

Note: To order a multiplier with an optional manually adjustable attenuator, add an "A" to the multiplier module part number (for example, 2000-1694-15A-R). Not available with 2000-1694-02-R.
