Anritsu Bootloader

Overview

The Anritsu Bootloader software application enables users to upload firmware to the Anritsu ML2430A, ML2480A/B, and ML2490A Series power meters. It is for use on an Intel-based PC with Pentium processor or equivalent and Microsoft® Windows® 2000, Windows XP, or Windows 7 operating systems (32- or 64-bit).

Anritsu maintains a policy of continuous development and enhancement of software. This software release note defines the latest enhancements of software version 1.0 for the Anritsu Bootloader application.

Software version 1.0 and the Anritsu Firmware Upgrade Guide (P/N: 10585-00028) can be downloaded from the Anritsu web site:

<http://www.us.anritsu.com>

There is no charge for this software download. This software upgrade does not require the instrument to be re-calibrated.

Note: Please consult Anritsu Firmware Upgrade Guide (P/N: 10585-00028) before performing an upgrade.
