

## Foreword

### First *Anritsu Technical* Electronic Publication

Vice President, CTO  
Tomoyuki Kikugawa

I am pleased to announce that Anritsu restarted its technical publication last year. Anritsu technical journal introducing in-house core technologies, new product designs and other various technical topics was first published in 1957 and went through 86 issues in 2008. Last year the journal was revived as electronic publication on the Anritsu Japanese web site. “Anritsu Technical Review” is its English version.

Anritsu is a global leader in cutting-edge test and measurement solutions for mobile communication industries. The technologies there evolve very rapidly and it makes Anritsu to place heavy emphasis on improving technical strength. So I think it worthwhile for us to show our technical aspect of our efforts through these electronic publications to many readers worldwide including customers, employees, cooperative partners and students who are interested in job opportunity in Anritsu.

Now Anritsu organized the 2020 Vision by company-wide activities to look toward next ten years. The following descriptions were made in terms of technology vision.

Benefit customers and society through original and high-level technical capabilities which endure competitive advantage in the existing businesses.

Acquire new technical capabilities for continuous incubation of new businesses where Anritsu provides

solutions globally based on our core competencies.

With this Anritsu Technical Review that introduces our effort to realize the vision, I hope we will reach customers more globally and facilitate and stimulate communications between Anritsu and them for leading to more solutions that meet their needs.
